## FAQ

### BENEFITS

- Helps tighten jowls
- Builds collagen
- Helps reduce acne
- Thickens the skin
- Helps reduce wrinkles
- Lightens sun damaged skin
- Clears complexion

### BEFORE

### AFTER

### Q: How does InvisiLift® work?

**A:** InvisiLift® uses safe and effective sound waves that are designed to target the middle-layer of the dermis within the skin. This is the layer where collagen, elastin, and DNA are manufactured. The soundwave energy delivered to this area raises the metabolic activity of collagen and elastin production, which assists in creating thicker, healthier, firmer, and more youthful skin.

### Q: How does InvisiLift® treat acne?

**A:** InvisiLift® helps oxygenate the skin, killing acne-causing bacteria. An InvisiLift® acne treatment incorporates special acne products. The sound waves safely and comfortably infuse serums into deeper layers of the skin... treating current acne breakouts and controlling future flare-ups.

### Q: Is there any down time?

**A:** No. You can return to work immediately after this gentle procedure.

### BEFORE

### AFTER

### BEFORE

### AFTER

### Q: How many treatments are needed?

**A:** Our office recommends a series of six treatments scheduled at one-month intervals to obtain full anti-aging benefit.

Acne treatments may be scheduled weekly.

### Q: Who is a candidate?

**A:** While the name implies "lifting" of the skin, InvisiLift® can treat a host of common skincare concerns. For example, it can effectively treat acne, remove toxins and impurities from underlying tissue, and help oxygenate the skin. So, anyone can benefit from this procedure.

Treatments available @ New England Naturopathic Medical Ctr.  
InvisiLift® treatments are comfortable, safe, and effective.

**Q: What if I'm having plastic surgery?**

**A:** InvisiLift® has been used prior to facial surgery and has been found to help speed post-operative healing and recovery time.

**Q: Is there any reason I shouldn't undergo an InvisiLift® procedure?**

**A:** Yes! You should not undergo this procedure if you have a pacemaker, are pregnant, wear braces, or have silicone or metal implants in the region to be treated.

**Q: Once I complete a series of six treatments, how long can I expect the results to last?**

**A:** Studies have indicated that some benefit remains for 3-5 years after completion of the initial series. However, most patients choose to have a maintenance treatment every four to six months.
