

A beautiful home
starts at the top.

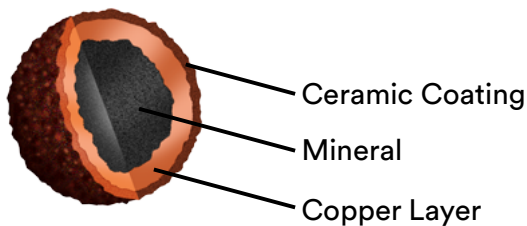

Preserve your home's
beauty with shingles
featuring Scotchgard™
Protector.

Your home should always be a point of pride, but new roofs can lose their visual appeal over time because of black streaks caused by algae. Preserve your home's beauty for years by choosing shingles featuring Scotchgard™ Protector from 3M.

Help protect the beauty of your home from black streaks caused by algae.

Roof shingles are susceptible to black streaks caused by algae, especially in humid climates. 3M scientists have solved this problem with the invisible, proven protection of Scotchgard™ Protector. Shingles featuring Scotchgard™ Protector are engineered with a high concentration of copper-containing roofing granules designed to preserve your home's beauty for years.

3M copper-containing roofing granule

A strong formula

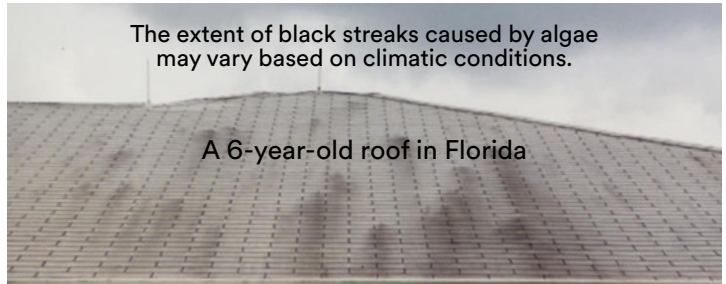

3M research shows that a minimum of 10% copper-containing granules, uniformly distributed across the shingle surface, helps prevent black streaks caused by algae. All shingles featuring Scotchgard™ Protector are tested by a third-party laboratory to ensure they have a minimum 10% copper-containing granules.

A trusted brand

For more than 50 years, the Scotchgard™ Protector brand has kept everything from clothing and outdoor gear to carpets and cars looking better longer. It's also the proven solution for preserving the beauty of roofs.
