NOW HIRING: LICENSED AME-E

SPRINGBROOK, ALBERTA | RED DEER REGIONAL AIRPORT

More than just another maintenance task.

At Titan Avionics, you're not just handed a task and sent to work on one small piece of an aircraft. You're part of the entire project.

From technical drawings and planning to installation, troubleshooting, testing, and final completion, our technicians have the opportunity to see their work through from start to finish.

We're a Transport Canada-approved Aircraft Maintenance Organization specializing in avionics and electrical systems for both fixed-wing and rotary aircraft. As our shop continues to grow, we're looking for a Licensed AME-E who takes pride in their work, enjoys solving problems, and wants to be part of a team where their experience and ideas matter.

Why Work With Titan?

Be involved in the bigger picture. Take part in projects from initial planning and technical drawings to final testing, gaining a deeper understanding of each project and its systems.

Enjoy variety in your work. Work on different aircraft, avionics systems, installations, modifications, and troubleshooting challenges.

Make a real impact. Our smaller, collaborative team values your expertise and input, and lets you see the direct results of your work.

Keep growing professionally. Expand your knowledge through varied projects, collaborative problem-solving, and opportunities to share experience with developing technicians.

Work with a connected team. Our smaller shop emphasizes open communication, cooperation, and practical input from the technicians doing the work.

Benefits & Compensation

- Competitive wages based on experience and qualifications
- Overtime pay
- Flexible, full-time scheduling
- Health and dental benefits after three months
- Relocation subsidy and assistance finding housing for candidates moving to the area

Travel & Off-Site Work

Occasional off-site work and travel provide opportunities to work on aircraft beyond our home hangar.

What You'll Be Doing

- Plan and execute avionics projects from technical drawings and modifications through installation, troubleshooting, testing, and completion.
- Install, inspect, repair, and maintain communication, navigation, autopilot, flight management, pitot-static, and electrical systems on varied aircraft.
- Diagnose complex faults, develop practical solutions, and verify system performance.
- Certify work within your authorization and maintain accurate technical records in accordance with applicable regulatory requirements.
- Mentor developing technicians and contribute to a safe, organized shop and its safety and quality processes.

What We're Looking For

- Valid Transport Canada AME-E licence
- Diploma in Avionics Technology
- Experience with aircraft avionics maintenance, installation, and troubleshooting
- Strong technical judgment and problem-solving abilities
- Knowledge of applicable aviation regulations and maintenance requirements
- Ability to work independently and collaborate with others
- Interest in sharing knowledge and contributing to team development
- Commitment to safety, quality workmanship, and continuous learning
- Valid driver's licence
- Strong written and verbal English communication skills
- Based in the Red Deer area or willing to relocate

Why Red Deer?

Enjoy a lower cost of living without sacrificing convenience. Red Deer offers more affordable housing than larger cities like Calgary, shorter commutes, and a great balance of city amenities and small-town living. Centrally located between Calgary and Edmonton, with easy access to lakes, hiking trails, and the Rocky Mountains, it's an ideal place to build both your career and your lifestyle.

Ready to Take Ownership of Your Work?

If you’re looking for more variety, greater involvement in projects, and a team that values your experience, we’d like to hear from you.
