

Technology Providing Vital New Power to an Established System

A Pathways program seeks to identify student interests and aptitudes beginning about 6th Grade, creating the foundation for future awareness of compatible career possibilities.

Beginning at Grades 9-11, Educational alternatives are explored, aimed at providing the hard and soft skills important to career success.

At graduation, the student intends to follow the educational path that will lead to a job in the defined field; and then to build toward long-term success. Total elapsed time is 10+ years.

21st Century System Requirement

Pathways was conceived in a simpler time when job markets and educational alternatives were stable. In today's technology-driven job market, whole career categories rise and fall in less than ten years. Educational options evolve rapidly. New vocationally focused alternatives are emerging. Colleges are dropping majors: long-established colleges are being closed. For some careers the opportunity will be waiting ten years later but in many modern categories the delay will be opportunity missed, or lack of awareness that the plan is obsolete.

The Answer: Periodic Review and Update

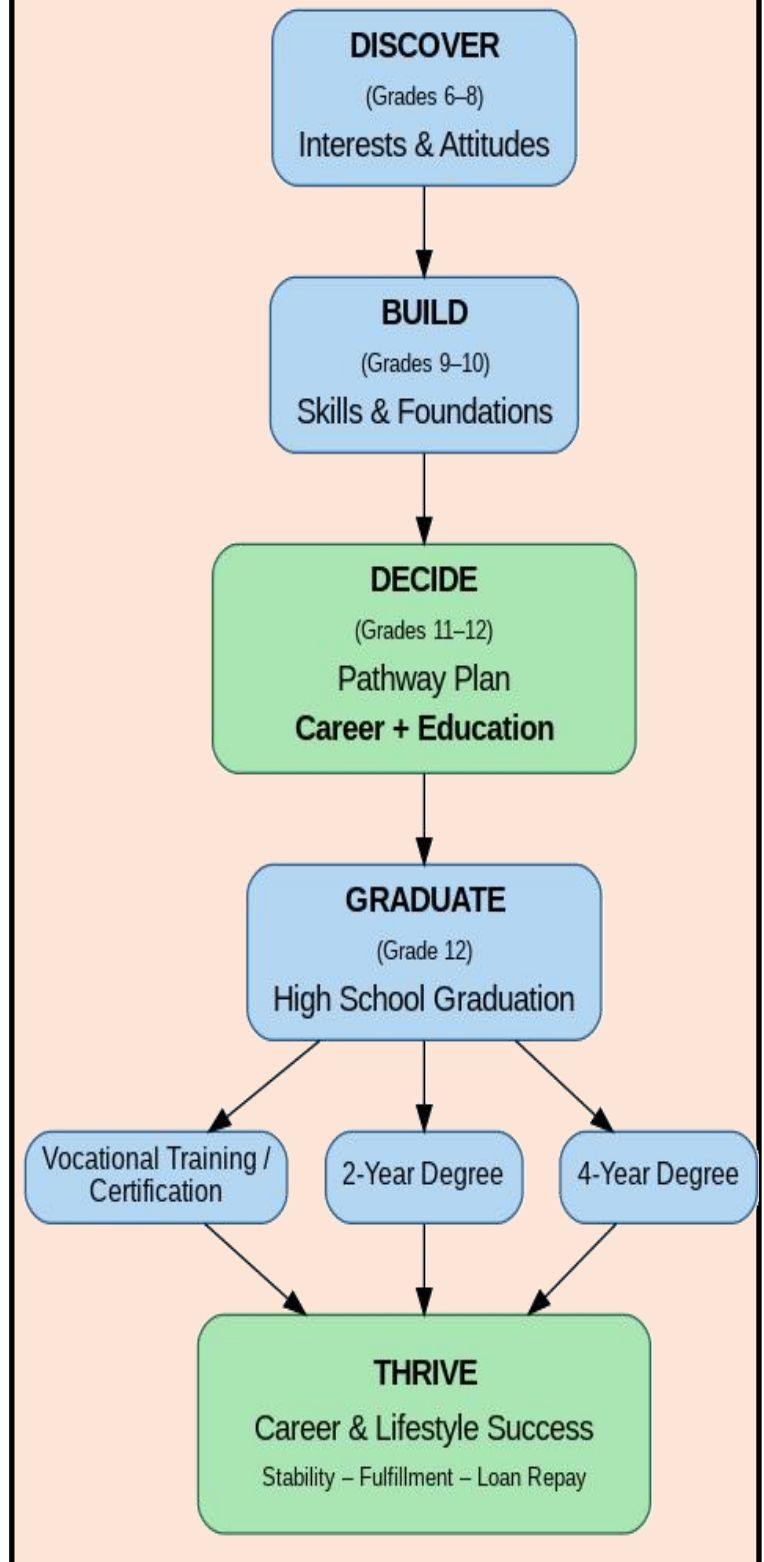

By using technology to analyze and update the Plan, we can turn potential pitfalls into pro-active plan adjustment.

The primary tools are AI's "predictive analysis" — awareness and projection of trends, and in-depth data management able to provide deep analysis. Analysis can be one student at a time, providing updated information for Counselors.

Student Debt Crisis: a 21st Century Disaster

The Student Debt Crisis is creating major financial difficulties for millions of families. **A flawed Pathways Plan is a major cause of student debt that can last a lifetime.**
