

GENETIC TESTING / DRUG INTERACTION TESTING

PRIOT TO SWAB

LOTS OF SALIVA

- Test can NOT be done if not enough DNA is collected. Medications and food/drinks can make the mouth dry.
 - o Massage cheeks
 - o Produce saliva (spit)
 - o Use swab on left cheek and roll swab around
 - o Use swab on right cheek and roll swab around
 - o Lab technician to check for ample saliva

AFTER SWAB

RESEARCH

- Can your data be used for research, or rather not? YES/NO
 - o Record on requisition form as indicated.

INSURANCE

- Test is covered by your insurance.
- Do you still have a deductible?
 - o If no: great!
 - o If yes: the laboratory will mail you a bill (\$200-\$400) to pay towards your deductible. They LREGALLY have to do that. However, the lab will NOT send you to COLLECTIONS (if they read between lines it means they can ignore that bill).
