“As the Brush Strokes” Newsletter from Capital Coatings, LLC

March 01, 2026

As many of our clients and customers are aware, **Capital Coatings LLC**, recipient of the Internationally acclaimed **Avetta** third-party business vetting entity, **2025 Safety Star Award**, began in 1998 as a **Coatings Consulting Firm**. We started by assisting our clients in working with our own coating materials formulations, including exclusive high temperature ceramic coatings, high-performance solvent free epoxies and ultra-high elastomeric materials, we set out to revolutionize the elimination of corrosion in the **Gulf Coast Region**.

Over the years, the Company has moved from consulting to that of providing its surface restoration services throughout the **Gulf South Region**. We were one of the first contractors to establish a team specializing in the surface restoration of in-service electrical substation transformers and switchgear. Employing in-house designed equipment, the Company is uniquely situated in its ability to flow-coat transformers' cooling fins. Integral to this service is the Company's ability to structurally modify the coatings materials to assure a coatings film that is continuous and at the proper millage to provide a corrosion free cooling fin surface at a thickness that will not inhibit the fins' ability to radiate heat as designed.

In future Newsletters, we will expound on other cutting-edge, innovative technologies that we have been integrally involved in throughout our professional careers. Realizing that Coatings are not the end-all to eliminating corrosion, and that limitations exist, the Management Team has developed a new technology whereby we are performing various stainless-steel alloys cladding of owner assets exposed to aggressive environments. Employing state-of-the-art exacting **Coordinate Measuring Machine (CMM)** technology and accuracy, utilizing specialized stainless-steel alloys, we can fabricate and clad the existing asset metallurgical surfaces thereby yielding a structure with an infinite service life. This will be further explained in a future Newsletter.

We look forward to presenting our **Bi-Monthly Newsletter** that will keep you abreast of our unique experiences and applications. Should you have any questions or concerns as to what you are presently experiencing, concerning corrosion control and/or elimination, we stand ready to discuss these issues with you. It is and always will be the philosophy of Capital Coatings LLC that Safety, Quality, etc. do not happen by chance, they are the product of complete Attention-to-Detail in all facets of the organization. Receipt of the Avetta '2025 Safety Star Award' confirms this expertise.
