## **Postmatic stamp affixer manual**

### **Postmatic stamp affixer. Postmatic stamp affixer troubleshooting.**

With Postmatic Stamp Affixing, you can attach stamps to any machine in line! They're the go-to choice for high-speed stamp applying, and their attachments work with inserter, printer, feeder - even Pitney Bowes or Neopost mail machines. The Postmatic Stamp Affixers can handle coils of 3,000 or 10,000 stamps at speeds up to 18,000 per hour. If you need a lower-cost option, check out the AFM80ST Postage Stamp Applier and Tabber. The machine's speed is adjustable between low (around 240 feet per minute) and high (exceeding 340 feet per minute). Its maximum size is 7 inches wide by 14 inches long. It can apply one stamp per cycle, with an adjustable placement from the leading edge of the envelope. The machine's coil capacity varies between 3,000 or 10,000 units. It operates on a standard electrical supply of 115 volts at 60 hertz.
