Custom Solutions:

This refers to IT solutions that are tailored to the specific needs of a client. IT Z can create customized IT solutions that fit the unique requirements of an organization, helping them to optimize their operations and achieve their business goals.

Full Cloud Integration with Backup System:

This involves integrating an organization's entire IT infrastructure with cloud services, allowing them to store and access data, applications, and systems from anywhere with an internet connection. IT Z provides a backup system to ensure that all data is backed up in the event of data loss.

Microsoft 365 Setup and Integrations:

This involves setting up and integrating Microsoft 365 services such as Office 365, SharePoint, and Teams with an organization's existing IT infrastructure, to provide collaboration and productivity tools to employees.

VOIP Cloud Phone System:

This refers to a cloud-based phone system that uses Voice over Internet Protocol (VoIP) technology to transmit calls over the internet. IT Z provides this service to enable organizations to make and receive calls from anywhere, using any device with an internet connection.

EMR System with Billing:

This involves implementing an Electronic Medical Records (EMR) system for healthcare organizations, which allows them to store patient data electronically and manage billing processes. IT Z provides this service to healthcare organizations to help them streamline their operations and improve patient care.

Printer Management Program:

This involves managing an organization's printer fleet, including maintenance, repairs, and supply management. IT Z provides this service to ensure that organizations have a reliable and efficient printing system in place.

Security Cameras and Alarms Systems:

This involves installing and managing security cameras and alarms systems for organizations to enhance their physical security. IT Z provides this service to help organizations protect their assets and prevent theft and vandalism.

Remote Access VPN:

This involves setting up a Virtual Private Network (VPN) that enables employees to access an organization's IT resources remotely, from anywhere with an internet connection. IT Z provides this service to enable remote work and ensure secure access to an organization's IT resources.

Disaster Recovery and First Response Team:

This involves creating a disaster recovery plan to ensure that an organization's IT infrastructure can quickly recover in the event of a disaster or outage. IT Z provides a first response team to quickly address any issues and minimize downtime.

Servers Install and Integrations:

This involves installing and integrating servers into an organization's IT infrastructure. IT Z provides this service to ensure that organizations have a reliable and efficient server system in place.

Cloud Storage:

This involves providing storage solutions that are hosted in the cloud, enabling organizations to store and access data from anywhere with an internet connection. IT Z provides this service to ensure that organizations have a reliable and efficient data storage system in place.

Multi-Encrypted Data Backup:

This involves creating backups of an organization's data and encrypting them for added security. IT Z provides this service to ensure that organizations have secure and reliable data backups.

Monthly Inspections Including POE Circuits:

This involves conducting monthly inspections of an organization's IT infrastructure, including Power over Ethernet (POE) circuits. IT Z provides this service to ensure that an organization's IT infrastructure is running efficiently and effectively.

Free Pickup Electronics Recycling:

This involves collecting and recycling old or unwanted electronic devices. IT Z provides this service to help organizations dispose of their electronic waste in a responsible and sustainable way.

Sandbox Environments:

This involves creating test environments for organizations to test new applications or software without affecting their production environment. IT Z provides this service to help organizations test and implement new solutions with minimal risk.
