

NGAP1319AB, 131-9A/9B APU STAND

B737NG/MAX, A220 and A320CEO/NEO

One-Stand-Does-All! APU Transport, Storage and Installation

APU OEM Licensed 131-9A & 131-9B Stand saves time and money by eliminating the need for transfer slings and separate transportation, installation and storage stands! Universal, flexible design reduces MRO labor, tooling, and transport costs. Mixed fleet operators save even more by having only one interchangeable stand.

Easily change between the 131-9A and 131-9B configurations by unpinning the APU mounts and securing them to marked storage points. Quickly swap from transportation to installation mode using integral installation supports.

GreenStand® APU container, constructed from 100% Recycled plastic panels attached to an aluminum frame, replaces the standard wooden box which saves weight, resources and creates demand for recycled materials. The panels fold and store on the stand when not in use, thus providing a smaller package to store or ship. This stackable stand reduces life-cycle cost and carbon footprint through its lower weight, volume and freight costs.
