This Document contains the three therapies currently offered by Life Sciences of Washington, Incorporated (LSOW).

- I. ImmunBoost 100 (IB – 100): This is a product that contains the requisite proteins – amino acids – necessary the actions of most viral infections. The IB – 100 has a 27-year history and has been successful in the reversal of a multitude of maladies affecting the human animal.
- II. ImmunBoost 30 (IB – 30): This product is a derivative of the IB – 100. Some instances of human health do not require arresting an infection but suggests “Prevention”. This is the need out of which the IB – 30 was borne.

LSOW, Inc. recommends, in one such scenario, the human begins a regimen of IB – 30 in mid-July. As such, by the time of the onslaught of cold/flu season, the recipient will have an immune response capable of combating and resisting the toxicity level in viral growth that is termed a “cold” or the “flu”.

- III. ImmunBoost 19 (IB – 19): This product contains similar properties as the IB – 100. Its Amino Acid sequences are arranged in such manner that said properties successfully combats bacterial infections.
