

Mister Victor Muhammad demonstrated to Dr. Alim et al. that the lozenges were inconsistent in their concentration of Ifn-a and, that it was unreasonable to attempt to consistently attain such a small amount of Ifn-a in each lozenge.

The lozenge ranged in concentration from 0 I.U per lozenge to as much as 500 I.U. per lozenge.

In November 1994, Victor was working as a Researcher at the Medical School at Howard University. He was again contacted by Dr. Alim wherein Victor was informed the following by Alim:

*“Brother ... the FDA has confiscated the Kemron at the airport (Dulles) and my patients (HIV/AIDS) are getting weaker and dying ... can you do anything?”*

Victor's response was, *“I don't know, brother. Let me see what I can do, and I will get back with you.”*

Then, after referring with his Immunology books from graduate school, and, recalling the instability and inconsistency of the lozenge that Dr. Alim had given him just a year earlier, Victor settled on a liquid preparation of the Ifn-a.

In the proper formulation and, under the appropriate environment, when considering an entity such as Ifn-a, a liquid suspension appeared more stable in a long-term preparation than a lozenge.

Victor carried 12 one-month bottles to Dr. Alim and asked him to try them with the patients.

Three days later, Dr. Alim contacted Victor with jubilation in his voice because the patients had positively responded to the preparation of Ifn-a that Victor had developed.

Five months after the above referenced time, Dr. Alim informed Victor that Demetrius X Haskins has serodeconverted after taking the preparation that Victor had developed. Then, approximately 1 month later, Francine (?), from Baltimore, Maryland, was the second person to serodeconvert via the use of Victor's preparation.

Note: The two names are cited in this document because the persons have given Mr. Victor Muhammad permission to use their names.

As such, by August 2002, a total of eight patients of Dr. Alim had serodeconverted because of the use of Victor's preparation of the Low Dose, Natural, Intranasal, Interferon alpha.

Moreover, in a recent (circa 2019), in an interview with Tariq Muhammad, Dr. Alim, after being prodded by Mr. Tariq Muhammad, stated the following:

*“Yes ... Brother Victor came to me and said, brother ... I can make that [Ifn-a].” ... But, brother Victor's product wasn't as stable”.*
