

ALASKA CNG

NATURAL GAS WHEN AND WHERE YOU NEED IT

Leaning out carbon

Diesel

Heavy, long chain hydrocarbon that is easily transported and stored. Energy dense but has a large carbon footprint.

Natural gas

Naturally occurring and readily available. Can be used in place of gasoline in common spark ignited engines. Lowest carbon/hydrogen ratio of any hydrocarbon.

Hydrogen

Has a bright future but must still tackle hurdles of production, storage, and engine production

Alaska's First

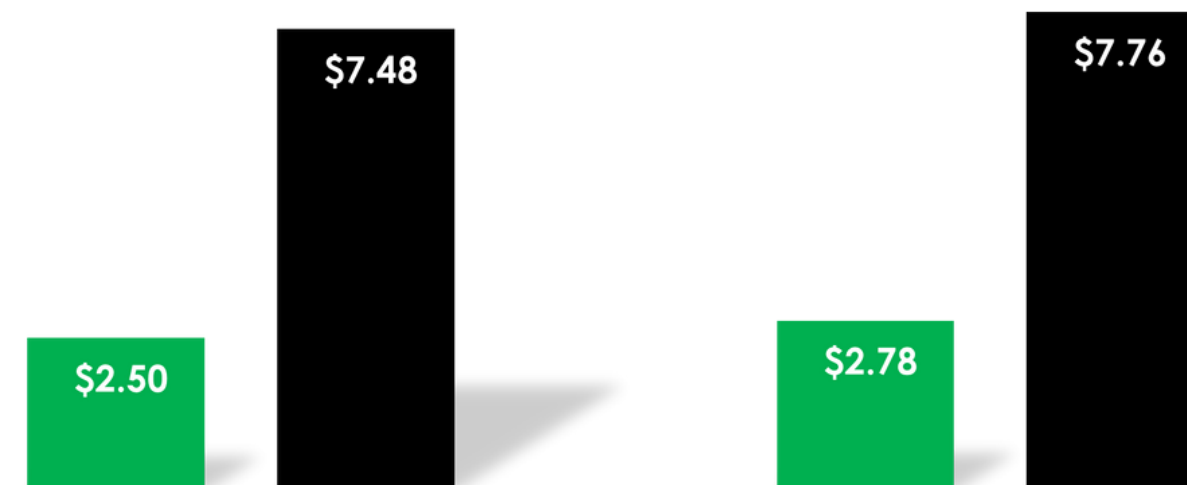

UTILITY & MOTOR

01. Utility

Where pipeline construction is uneconomic due to distance from supply or limited demand time, off-pipeline distribution (OPD), or "virtual pipeline", provides a solution for clients looking for a greener, cheaper energy source.

02. Motor

As the cost of road fuel continues to increase, compressed natural gas maintains a competitive edge.

OUR CURRENT PROJECT IN 2022

01

Mobilization of CNG
using natural gas
powered freightliners
hauling 175MCF CNG
tube trailers

02

New CNG station built
on the Norgasco pad to
make CNG available for
local motor fuel

WHAT DO YOU KNOW ABOUT OUR COMPANY?

Utility level service

Delivered compressed natural gas can be trucked to your site and coupled with a pressure let down skid to provide natural gas service equivalent to pipeline service availability.
