Oral Thin Films Market Insights

Global Oral Thin Films Market size was valued at USD 3.46 billion in 2023 and is poised to grow from USD 3.7 billion in 2024 to USD 4.7 billion by 2032, growing at a CAGR of 9.3% during the forecast period (2025-2032).

US Oral Thin Films Market is poised to grow at a sustainable CAGR for the next forecast year.

A driving factor for the global oral thin films market is the increasing demand for innovative drug delivery systems that enhance patient experience and adherence to medication regimens. Oral thin films provide a non-invasive and user-friendly method of drug administration, particularly suitable for pediatric and geriatric populations. The ease of use and potential for taste masking also make oral thin films attractive for patients who have difficulty swallowing traditional tablets or capsules.

The growing demand for personalized medicine, pediatric medications, and self-administered therapies opens doors for innovative drug delivery systems like oral thin films. Additionally, expanding applications in the nutraceutical and over-the-counter sectors present avenues for market growth.

02

OEM&ODM

03

5 year+ experience

04

Multiple patents

Advanced Production Capabilities

- Established a state-of-the-art factory in 2023, equipped with customized machinery for nicotine pouches and strips production
- Holds multiple patents for proprietary formulations and innovative manufacturing technologies
- GMP-certified facility (Class 100,000 ISO cleanroom), adhering to both food and pharmaceutical-grade quality control standards

Rigorous Quality Assurance

- Strict temperature and humidity control throughout production to ensure optimal pH, texture, and stability
- Resealable ALU/Pet packaging ensures product integrity with a 24-month shelf life
- Complies with international pharmacopoeia testing standards (e.g., USP dissolution and disintegration requirements)

Flexible Collaboration Models

- Offers full OEM/ODM customization, including flavor profiles, functional additives and nicotine strength adjustments
- End-to-end support from R&D to mass production for rapid market entry
- Open for collaboration inquiries—let's explore opportunities together

worldwide leader in natural resins

Biotechnology Exploring and developing innovative biotechnologies leading the forefront of science

advanced equipment and methods to ensure high efficiency and purification of plant active ingredients, ensuring every piece is pure

Highly innovative application accepts the active ingredient and runs like any other direct combination on a standard oral film making machine.

Scientifically Proven Products are scientifically researched and clinically proven to ensure safety.

Comparison of product advantages:

Compare dimensions	Our Products	Competitor products
Health Impacts	No combustion, no tar, reduce respiratory damage.	Contains tar, carbon monoxide and damages the lungs.
Absorption efficiency	30 seconds for direct absorption by the sublingual mucosa	5-10 minutes for absorption through the lungs
Social influence	It is odourless and residueless, and does not disturb the people around you.	Leave a smell of smoke that affects others.
Addiction management	Precise dosage to gradually reduce dependence.	Difficulty controlling a single intake
Convenience	Ready-to-use, no auxiliary tools required	Lighters and ashtrays are required.
Cost-effective	The single cost is controllable and more cost-effective.	High long-term cost (+ tax increase)
