

Bright Feed-C (Corn Silage)

Corn silage is a popular forage for ruminant animals (Sheep, cow and camel) because it is high in energy and digestibility and is easily adapted to mechanization from the stand-crop to time of feeding. Corn silage should have a light, pleasant smell with only a slight vinegar odor. It should be slightly brown to dark green.

Corn silage can efficiently recycle plant nutrients, especially large amounts of Nitrogen and potassium. Corn silage contains about 25-35% dry matter. It is relatively poor in protein (5-10% of DM) and rich in fibre (15-27% of DM), with a highly variable starch content (18-37% of DM). It is low in lignin and lipids (about 2-3% of DM each).

Specifications

Packaging Type - Covered with top quality stretch film

Moisture - 70% or customized based on customer need

Packaging Size - 250 Kg

Grade - Feed Grade

Usage/Application - Cattle Feeds

It Organic – Organic

Brand – Bright Feed-C

Country of Origin - Made in India

Minimum Order Quantity - 25 tone
