

Bitcorn: Corn Meme Token

Built On The XRPL

- Fast and energy efficient
- Same capabilities as XRP
- Decentralized ecosystem
- Meme token similar to Doge

History:

Time Created

Sep 21, 2021, 02:00:01
Bitcorn was minted on the XRPL by Kernel Buttermoto.

Inspiration

Bitcorn's creation was inspired by meme coins like Doge and Shiba INU. Being a parody token to Bitcoin only 3,301,499 Bitcorns will ever exist so no energy consuming mining is required to produce more unlike other proof of work tokens. "Bitcorn the Green Meme Token"

BITCORN

Built On The XRPL

Official White Paper

2021

1. Why the XRPL?

It was a no brainer to create Bitcorn on the XRP ledger, ease of development, low transaction costs, energy efficiency not to mention it has the best Crypto community the XRP Army! Bitcorn was made to prove that anything built on the XRP Ledger is faster and more reliable than Bitcoin even, corn.

2. Why Corn?

Kernel Buttermoto was abandoned as a child in a corn field and survived by feeding on the corn! It became his favorite food! Also, corn is the best vegetable and you can do so many things with it. Who doesn't love corn?

3. Community Driven!

Kernels united, we stand together driven by cryptocurrency innovation! This meme token was also made to show the power of the Kernels and the XRP community, the only value it has is the value the community gives it! No one has control over the supply of Bitcorn the issuer wallet was blackholed after initial free gift airdrop of 1700 Bitcorn to the first 700 trustlines set on the XRPL then a final airdrop of 425 corn to all 4,854 trustlines that were set when we hit our community follower goal of 1000 Kernels on Twitter! *Note Bitcorn is not a company or organization, We don't make profits off of selling this token. This is not a security, there never will and never has been an ICO or a fundraiser. This is an educational and fun token made and airdropped for the Kernel community to learn how to build and develop tokens, and NFTS on the XRPL.*

4. What's A MEME Token?

A crypto that is associated with some theme, often as a joke rather than a serious product. Dogecoin was the first meme token because it was named after a popular dog on the Internet. Meme is the actual name of another cryptocurrency, and there are tokens with "meme" names such as imemecrypto, Bitcorn is made from this same meme model.

5. Long Term Vision

Who knows what the future holds for Bitcorn, it would be amazing to see Bitcorn thrive in the meme and gaming community! We would love to see people sending and receiving corn tips to their friends! The creation of Bitcorn was for fun and educational purposes to teach about NFTS and meme tokens and how to use the XRPL. We will look to intergrate the token into our future projects and community eco system through NFT, meme and gaming projects.
