

Class Facility

All live sessions will be held at the Kodiak Mountain Resort,
82717 US-89, Afton, WY 83110

Class Dates: May 2, 4-6

This course will give you the confidence and clinical guidance to manage the mechanically ventilated patient. It is a comprehensive, combined learning curriculum that will include an on-line, instructor-led didactic portion combined with an intense 4-day scenario based component. Case studies in addition to physical application of strategies are tailored to provide the learner with clinical reasoning and critical thinking. At the completion of this course, you will feel confident in applying mechanical ventilation strategies as well as an in-depth knowledge of cause and effect.

The golden hours of critical care resuscitation. Delays of even a few hours in the treatment of critical care syndromes can result in irreversibly large physiologic changes that become increasingly difficult to overcome. The window for primary and secondary prevention is early in this disease process, where small changes in key homeostatic drivers can make differences in short- and long-term outcomes.

"Is Acute Respiratory Distress Syndrome A Preventable Disease" Hemang Yadav, et al 11/2016
