When older buildings have restrictions of Shorter Garage Doors & Shallower Stalls, Paraliner has always been there to fit the bill...Now when the bill needs to be smaller, the Paraliner is the answer to that as well.

The Paraliner was the start of it all for Life Line back in 1985. Now here it is, never left, just been taking a back seat to our big boys (Superliner & Highliner). It's back in the lime light as a budget friendly alternative.

The Paraliner maybe small, but it's in there:

- Over 2" thick Double Aluminum, interlocking, insulated floor.

- 2x3 Impact Rail System, designed to absorb impact & minimize module damage.

- Substantial Bank Vault design three-inch-deep door structure on all entries & compartments.

- Surround quiet 2" Plank foam Insulation plus 4mil Vapor barrier through-out Module walls, Ceiling & Doors.

- Strong lightweight solid surface interior cabinet construction.

- "Y" design Chamfer cabinet corner an Integrated element eliminating any exposed fasteners for ease of cleaning.

- An exclusive Life Line Design 2x3 Triple hollow before & aft of the wheel well of both the wall & floor construction for extra side impact protection.
