adds value to cleaning

Factory - Düzce

ERMOP, founded in 1990, has become a leader in the industrial cleaning sector in a short time due to the importance attached to the R&D and innovation. **ERMOP**, which has realized the production of high quality and durable cleaning accessory equipment required by the companies it serves in line with the principle of "permanent customer satisfaction", increased its target by 2000s. It has renewed itself continuously in the field of production technology as well as on the basis of product, and has become one of the important brands in the cleaning sector abroad.

ERMOP, which developed the factory that has been in Düzce, that has a covered area of 5,000 square meters, built on 10,500 square meters of land and that entered into service in 2008 through injection systems, molding and weaving machines investments in 2010, increased its production capacity and quality thanks to these factors and reached a production capacity which can easily respond to increasing customer demands both at home and abroad. **ERMOP**, which has shifted its production completely to Düzce, started to use its 3,000 square meter facilities in Central İstanbul as office, showroom and warehouse. Finally, to provide faster and more effective service to its customers in Europe, **ERMOP**, which puts into service the European Sales Warehouse in Frankfurt, Germany, started to make sell to its customers in the region from here.

ERMOP has undertaken the supply of cleaning equipment of many national and international world brands as a result of its successful work. Ermop continues to be the organization that sets the standards in the industrial cleaning sector in Turkey and in all countries where it provides service with superior quality cleaning equipment that it produces and with the importance given to customer satisfaction.

GECKO SYSTEM

Gecko System is a system developed for professional users looking for innovative solutions. It enables real hygienic environments to be created in hospitals, shopping malls, schools, business centers and factories. It helps you to save time and labor thanks to its quick and easy use and specially designed products.

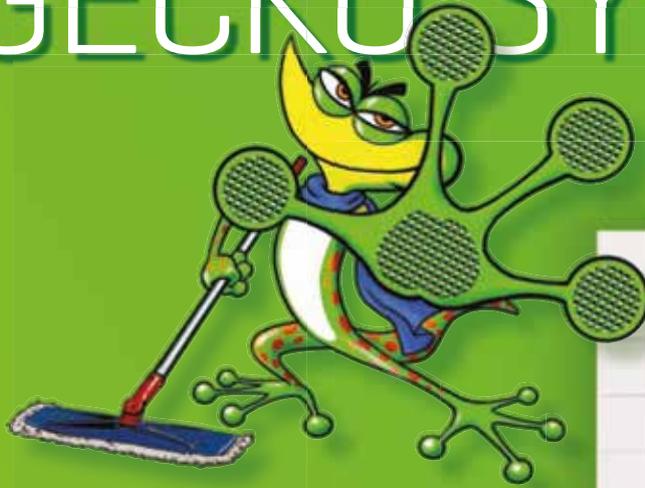

*You can reduce the amount of water and energy you use and minimize damage to your environment, and save on labor and time with the **Gecko System**.*

GECKO SYSTEM

4

RESULT

3

APPLICATION

- *Saves water*

Gecko System cleans 1.600 square meter area with 50 liters of water by using Mop washing machine.

50 lt water = 1600 m²

Standard Double Bucket Mop Trolley

cleans 500 square meter area with 50 liters of water by continuously cleaning the mop in the bucket.

50 lt water = 500 m²

- *A real hygienic environment is created and maintained.*
- *Automatic dosing reduces chemical cost.*
- *Cleaning staff uses work force more effectively.*
- *Worker health is protected and possible accidents are prevented.*
- *Equipment stock is reduced.*

Mops in the hygiene boxes placed in the trolleys are ready for direct application. The system is suitable for all floors.

Approximately 35-40 m² area is cleaned with a mop. After a cleaning, the mop is thrown into the dirty section on the trolley and the accumulated mops are sent to washing.

1

PREPARATION OF MOPS

B

ADDING CHEMICAL

Chemicals are added to the mops in the machine preferably Bakterio or Sanialc product. The chemicals are automatically dosed to the machine with the dosing unit.

A

WASHING

Washing is performed with Quantum Basic, Quantum Surf and Quantum Peracetic in 60 °C or 90 °C.

C

DAMPNESS

The moisture of the mops is adjusted according to the used mop and surface.

2

STORING MOPS

Ready-to-use mops are kept in Gecko hygiene boxes with sealed cap.

*[Can be stored up to 24 hours]

Gecko Microfiber Mop

It is the ideal mop type for cleaning and polishing purposes. Thanks to microfiber texture, it is an effective product for collecting dust from the ground. It can be used dry and humid. It is made of 100% Microfiber cloth. It is especially recommended for disinfecting and sensitive cleaning purposes. It gives advantage to the user with its ability to move easily on the ground.

MOP

group

Mop Types: It is divided into 4 main groups; Damp, Microfiber, Wet and Orlon. 1st quality yarn is used in all our mop varieties. This enhances the mop's life and water holding performance. It is used as damp, wet or dry in daily cleaning of all kinds of floors.

COLOR CODE

Thanks to the color code given of the mop, cross contamination is prevented and hygienic environments are created. When washing, mixing of mops is prevented and hygienic washing results are obtained. The color code also lowers inventory costs and eliminates storage problem. In case of demand we also have extra color coding for our customers.

-  : General Environment
-  : Hospitals and kitchens
-  : Sterile environments and personal areas

HANDLE *group*

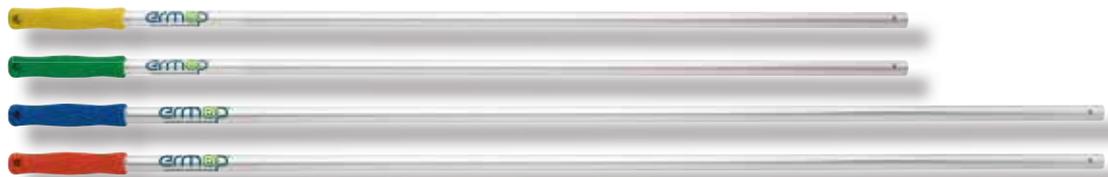

It is an integral part of the mops and is resistant to all kinds of storage and handling conditions as it is produced from rust resistant material. Mop handles made of anodic aluminum (coated with electrochemical process) are durable and long lasting. It is used safely for many years because of its non-oxidation property. The ends of the mop handles with a diameter of 23.5 mm have perforated or screw options.

Handles

Aluminum Handle

It is our aluminum handle type compatible with all mop frame.

Code	Width (cm)	Length (cm)	Weight (gr)	Pieces in Carton
SA 120	2,5	120	240	25
SA 140	2,5	140	240	25

Aluminum Handle with Screw

They are the handles that are mounted with the screw system to mops attached to it. They are preferred because it allows it to remain stationary during the cleaning process. They can only be used with a Spanish mop among our mop group.
