

65 COUNTRIES 210 HIGH-TECH INDUSTRIAL GREEN CENTRES 2005 – 2025 CONSTRUCTION PERIOD 2025 TO 2045

GLOBAL BUDGED FOR CONSTRUCTIONS UNDER DEVELOPMENT FOR 65 COUNTRIES

Corporation Project Name	Location	Project short	2005-2023 Status	Project Budget
AVIS Capital Limited (ACAP)	London	Group Treasurer Capital Manager	Fully paid and under production	26.000.000.000 €
AVIS Global Green Energy Fund Limited	London	Group Treasurer Capital Manager	HSBC Capital deposit 2017 until 2027 plus 3.5% interest rate	22.000.000.000 €
	London	Group IT Developer, Owner of the AVISPay Core		
AVIS Fintech PLC	Canada	Banking. Owner of the AVIS Marketplace metaverse software and IT Infrastructure	Operative in Part	500.000.000 €
AVIS Congress Hotel PLC	London	London Management Tower, London Crown Hotel, Spain Congress Hotel, Divers Real Estates	Under development	1.000.000.000 €
AVIS Vortex PLC	London	2000 Waste Millings VORTEX	Under development	300.000.000 €
AVIS NucTron PLC	London	Next Generation Atom Reactors, Russian Team	Under development	50.000.000€
AVIS Atom Thread PLC	London	Graphene Production	Under development	2.050.000.000 €
AVIS Simmtronics Tech Corporation	USA	A-Pad Hologram Computer	Under development	45.000.000 €
AVIS Magnetic Technologies PLC	London	Heavy Water Reactor Ring Prototyping & Production	Under development	10.000.000€
AVIS Logistic LTD	London	AVIS. Global Franchise, general world acquisition logistic	Operative in full	500.000.000€
AVIS Project for the 3D printing robots	Australia	AVIS. Global Franchise, equipment manufacturing	Operative in full	100.000.000 €
AVIS Hotels PLC AVIS for high-tech paradise leaving a university city for 500.000 people and 3D printing prototyping of futuristic technologies	UK	Several GB High-tech Industrial Projects in different locations in the UK	Under development	25.000.000.000 €
AVIS NoAge PLC	London	Biodrux NoAge Production and 4000 Cancer treatment Products & Patents	Under development	6.000.000.000€
Canada Construction	Canada	Construction of the Colombia high-tech green city with the 2x20.000.000 waste facilities Harbour and 3D printed high-tech paradise green city for 5.000.000 people	Completed and in development of extension infrastructure in Canada	85.000.000.000 €
Brazil high-tech paradise and university city for 20 Million people and 3D printing prototyping of futuristic technologies	Brazil	Construction of the Brazil high-tech green city with the 5x20.000.000 waste facilities Harbour and 3D printed high-tech paradise green city for 20.000.000 people	In the development of extension Infrastructure in Brazil	300.000.000.000 €
Rwanda, high-tech paradise and university city for 10 Million people and 3D printing prototyping of futuristic technologies	Africa	Construction of the Colombia high-tech green city with the 2x20.000.000 waste facilities Harbour and 3D printed high-tech paradise green city for 10.000.000 people	Completed and in development of extension infrastructure in Africa	85.000.000.000 €
AVIS Securities	Colombia	Creation of internal trading platform for the AVIS Group derivative trading	Completed and in development of extension infrastructure in Colombia, Spain, London	230.000.000 €
HJK ArtMedia Industry	London	The first graphene fashion 3D printed project with 47.000 styles	Under development	10.000.000.000 €
AFRA 100 Facility Construction	Africa Continent	100 Construction Development Contracts in the African territorials contracted with the Africa Central Bank	Ready for start of construction and paid by digital currency	250.000.000.000 €
130 Green Facilities Construction Project	Globally	120 Construction Development Contracts with governments between 2005 until 2023	Ready for start of construction	350.000.000.000 €
AVIS Shipping	Grupo Meridial	10 Floating Waste2NanoPowder facilities, The University Prototyping Vessel. The Experimental eVessel	Under development	10.000.000.000€
AVIS eCar Industry	Germany	AVIS Reverse-Tesla Engine & 3DGraphene eCars production and distribution	M&A negotiating's with several international German Car manufacturer	5.000.000.000 €
AVIS Construction	Spain	M&A of Grupo Meridial	Under development	80.000.000.000€
AVIS TV	Spain	M&A of several small and middle-sized media centres	Under Development	500.000.000 €
AVIS Cartagena, Spain high-tech paradise and university city for 5 Million people and 3D printing prototyping of futuristic technologies	Spain	Construction of the Spain high-tech green city with the 3x20.000.000 waste facilities Harbour and 3D printed high-tech paradise green city for 5.000.000 people	Under Development	180.000.000.000 €
AVIS Colombia high tech paradise and university city for 20 Million people and 3D printing prototyping of futuristic technologies	Colombia	Construction of the Colombia high-tech green city with the 5x20.000.000 waste facilities Harbour and 3D printed high-tech paradise green city for 20.000.000 people	Under Development	500.000.000.000 €
Project Value developed between 2005 up to 2023, contracted and valid for completion		s have been reserved or fully paid in. Part are off balance ts effected between 2018 to 2023	Total EUR Capital Value	898.036.000.000 €
AVIS Bank LTD development	Africa, USA, CH, UK	June 2021 agreements with LOI are accepted by the board and shareholders	Under development	1.000.000.000 €
AVIS Franchise develops a number of projects that are not valued	World	2005 - 2023 onwards	Ongoing developments	500.000.000.000 €

Budget value required during 15 years

Reserves

3.338.321.000.000 €

10.000.000.000.000 €

BUDGET REQUIREMENTS cash for construction we need about €3.500.000.000.000 between 2024 up to 2040

RESERVES cash €10.000.000.000

INCOMING OF THE PROJECT Waste management, nanopowder handling, energy production, food production and industrial equipment sales €100.000.000.000 each year

WORKING SPACE CREATION 10.000.000 jobs

STOCK EXCHANGE BLOCKCHAIN 1.000.000 corporations' participation (High- and Greentech)

LIQUID CASH INCOME AND SPENDING FORECAST

Cashflow Budget for the AVIS UMBRELLA Construction Development 2024-2026-2040

PHASE 1

Adapting existing 100,000m2 Industrial Facilities for the manufacture of High-tech electronic products, Graphene research and industrial production and VORTEX Nano Powder mills 3D printing in graphene and titanium.

University installation together with https://www.hanyang.ac.kr/web/eng/home/Research

And production of 3 different types of generators for the generation of free electricity.

3D printer valuation test department with TITOMIC and prototyping production center including robot printer test center.

General generation of green energy technology research Centre units.

Adapting the existing topographic infrastructure for the discharge of garbage import of up to 20,0000.000 metric tons.

Installing 250, *15 MT-Vortex mill units for the waste conversion into 3D Nano Powder. and

Installing 100, 3D Printer processing units for Industrial Products. and

PHASE 2

5 Units 10.0 Ha "State of the Art" - high-tech tropical glass greenhouse and the Installation in cooperation with a Combined Heat and cooling Power station.

2500 Mt organic fish production unit and a zero-energy input building for packing vegetables and fish. and

2GW electro generators technology – Hydrogen Magnetic Dynamo. and

Start Tax-Free Zone, Corporate Register. and

Start a Large Shipp Register. and

Start Bank Quantum Server Centre. and

Waste Conversion Capacity: >20.000.000 metric tons (phase I plus phase II)

PHASE 3

3D Paradise City Construction for 500.000 to 1.000.000 people

2. DESCRIPTION OF THE INITIAL START-UP INFRASTRUCTURE

Renting & leasing or purchase of the existing municipal glass building for the initial management of the development at 23000 Northwest Lake Drive

Personal requirements: 25 in administration sourced from the local market 40 Engineers and scientist sourced form AVIS Membersand local universities

The US franchise team will negotiate all requirements for the initial start-up of the project

The principal inventors and engineers will arrive with their infrastructure for the prototyping of the technologies required for the industrial development

The AVIS Construction department will arrive with about 100 team members for start of development

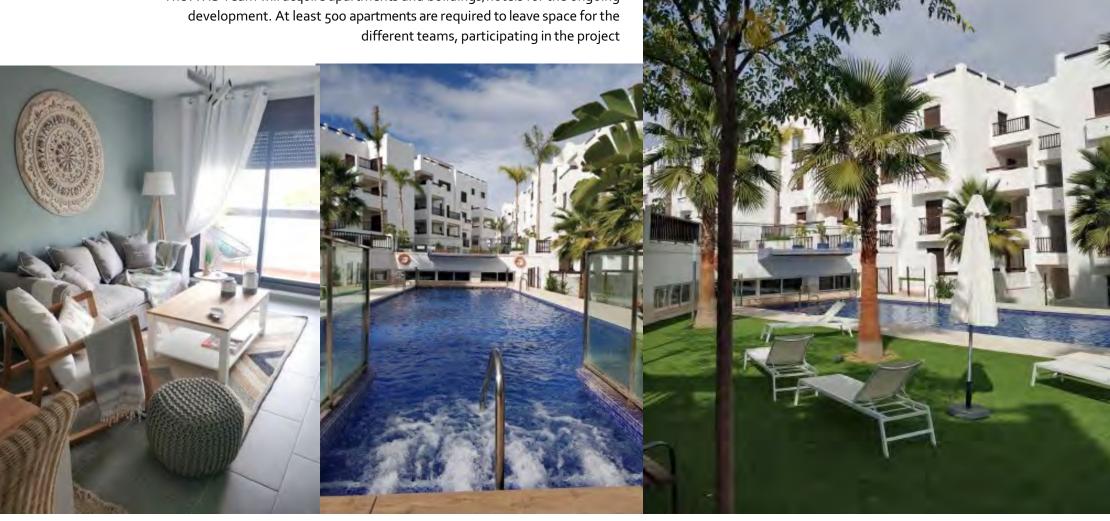

3. ACQUISITION AND/OR RENTING OF EXITING INDUSTRIAL BUILDINGS

The AVIS Team will rent and/or purchase at least 100.000 m2 exiting buildings for the adapting into production facilities for prototyping of VORTEX Mills and Generators and Graphene

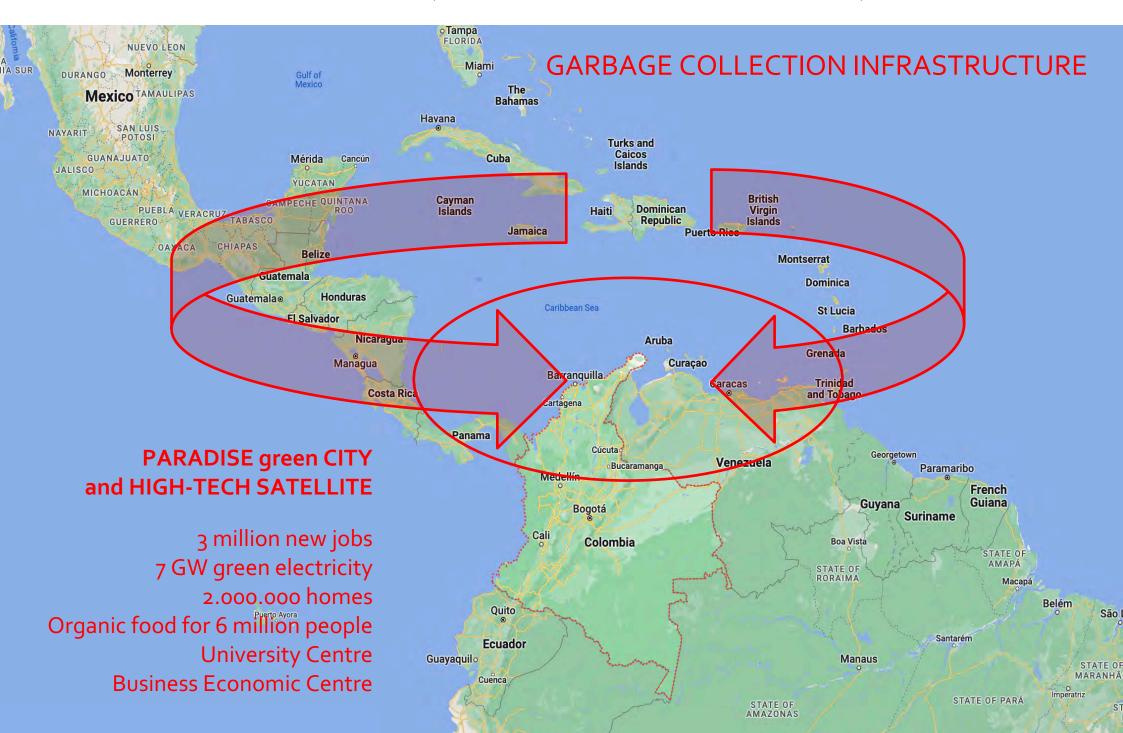

4. ACQUISITION OF APARTMENT BUILDING INFRASTRUCTURE

The AVIS Team will acquire apartments and buildings/hotels for the ongoing development. At least 500 apartments are required to leave space for the

5. 3D PRINTING OF PARADISE APARTMENT BUILDINGS AND INFRASTRUCTURE WITH NO TRAFIC AND NO ELECTRIC GRID FOR +500.000 PEOPLES

7. LOCACTION INFRASTRUCTURE

GEOGRAPHICAL LOCATION Latitude: 12°02′49.11" N / Longitude: -71°44′08.65" W

Address Colombia Caribe

Surface area "A" approximately 20000HA

Distance to the embarkation/disembarkation pier Minimum meters as possible

inclined flyovers for check-in / out of electric vehicles and motor vehicles to the underground floor (parking) and to 1, 2 and 3 bove-ground floors

17. BASEMENT

All POWDERS managed in hermetic closed shipping pipes from VORTEX to packing line and to TITOMIC & other printers

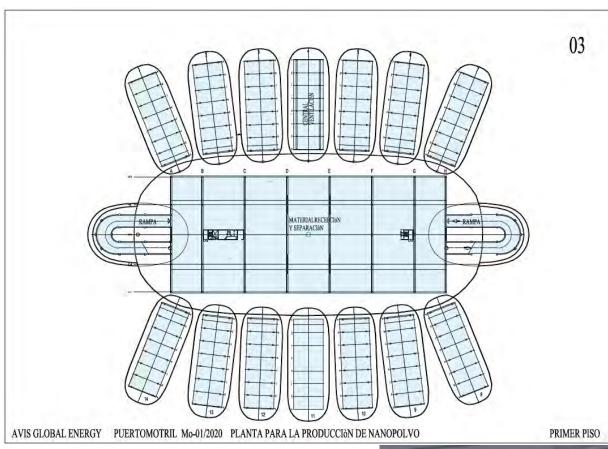

- **a.** Radiation and dosimetry control, disinfection barrier at the site of the entrance enterprise
 - **b.** Weighting on a truck scale
- c. Unloading at the receiving site of the sorting unit with the help of a mechanical unpacker
- **d.** Unloaded trucks for re-weighing (for containers)
 - e. Selection by a lifting device (manipulator-separator) bulky waste not subject to further processing (parts machines, refrigerators, household appliances) that are loaded into storage bins with sorting
 - **f.** Oversized wood waste moved to chopper, and then to production
- **g.** Undergoes UV disinfection and is fed by conveyors to sorting line
- h. Sorted and shredded waste goes to storage bins and to the Vortex production facility

! All POWDERS delivered in hermetic closed shipping pipes from VORTEX to packing line and to 3D printers

VORTEX MILLING TECHNOLOGY

Functionality

The equipment is based on the resonance vortex grinding technology, which allows the grinding of any material, from wheat grain to diamonds. The phenomenon of crushing materials of any hardness is possible due to the occurring of pressure gradient zones in the vortex mill that amount up to hundreds of thousands of Bars, where the generation of multistage resonance, and the impact of particles occur.

vortices (four) discharge (dark-

The resonant vortex "TORNADO" installation is a gasdynamic mill in which the technology of cascaded adiabatic resonance impact grinding is implemented, impact velocities of which are close to a breakdown threshold. When the material is injected into such area of pressure differential, a rupture of the material's structure and clusters occurs. Such mechanism can be compared to the mechanism of material's sample destruction, which is done in order to determine its strength characteristics at tensile test plants. That is, the grinding occurs not due to the friction or any other mechanic force, but by "air" and resonances, which provide a high and efficient performance, great flow rate of raw material as well as inexpensive exploitation (no rubbing parts) with low power consumption.

VORTEX technology accompanied by a change of the physical state, chemical properties and composition of the grinded material. Ultrafine grinding is accompanied by a change of defects of the crystalline structure, up to the complete amorphization substance. This creates an «aftereffect» due to the fact that the grinded material possesses

«excess» energy that was accumulated during the grinding process. These processes facilitate the functionalization of homogeneous and carbon structures, such as metal inoculation.

The technology of grinding rocks in the air-vortex flow of «Tornado» has been created specifically for the detection of crystals and aggregates, more efficient enrichment by the «dry method».

24. VORTEX PRODUCTION EQUIPMENT & CAPACITY

Production area of VORTEX* machines 02

Location Machines VORTEX lateral (arm) compartments of the building

powders.

Classification of outcome 2-4 machines (Classifiers) for the precise separation of micro-

and nano-powders

Numbers of classifiers 100

Working body (carrier) compressed air, argon, nitrogen, carbon dioxide

Consumption of Working body 10m3 per minute per machine

Total Consumption of Working body 4200 m3 per minute

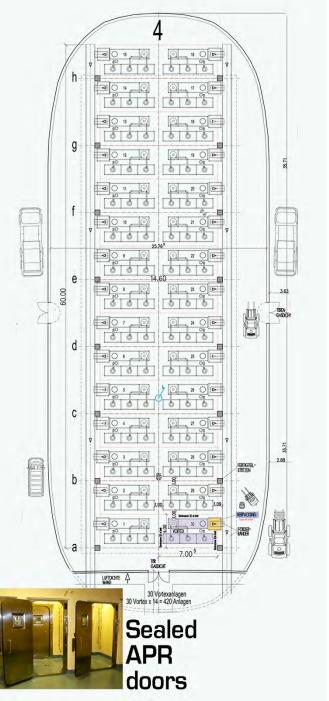

Pressure 10 Bar

Return the working body of the machine after cleaning - back to compressor

Noise level dB 60-70

Power electro consumption 200W per machine

Totally electro consumption 84 kW Environmental damage\ harmful emission ZERO

25. 3D PRINTER PRODUCTION DEPARTMENT TITOMIC

The production area of TITOMIC 3D* printers is located on the third floor of the building and is shown in drawing 03-AVIS-1. OG-08.02.

There are 100 printers in the zone.

*Brief description of the principle of operation of TITOMIC:

Micro - and nano-powder comes to printers by means of tight pipes (product lines) and moves to a printer nozzle. The TITOMIC 3D printer is based on the CSIRO principle of the process of applying cold gas-dynamic spraying of particles of titanium or a titanium alloy or other substances based on the deposition of supersonic particles of metal powders to create large-scale parts and complex surface coatings.

When using a 3D printer, nitrogen is used with a pressure of 5.5 bar. In the process, nitrogen is heated (not burning) to + 6000C, which is then diverted out through the ventilation. Nitrogen enters the printer from a gas storage tank with a capacity of 10,000 m3. A nitrogen generator is provided to fill the storage tank.

Finished products are removed from the frame and transferred to the finished goods warehouse located on this floor. From the warehouse of finished products are shipped to consumers.

In the production area of 3D printers, supply and exhaust ventilation are provided. The main technical characteristics of the TITOMIC 3D printer are given in table 4.

No.	Name Unit.	Measurement	Quantity
1	Pressure of Nitrogen	Bar	5,5
2	Consumption of nitrogen	m3 per min.	0,014
3	Pressure of air	Bar	6
4	Consumption of air	m3 per min.	0,27
5	Noise level	dB	64
6	Electro current	Α	420

9	Totally electro power for 100 items	MW	15
10	Environmental damage\harmful emission		ZERO

26. 3D PRINTING DEPARTMENT - (TITOMIC AND OTHERS)

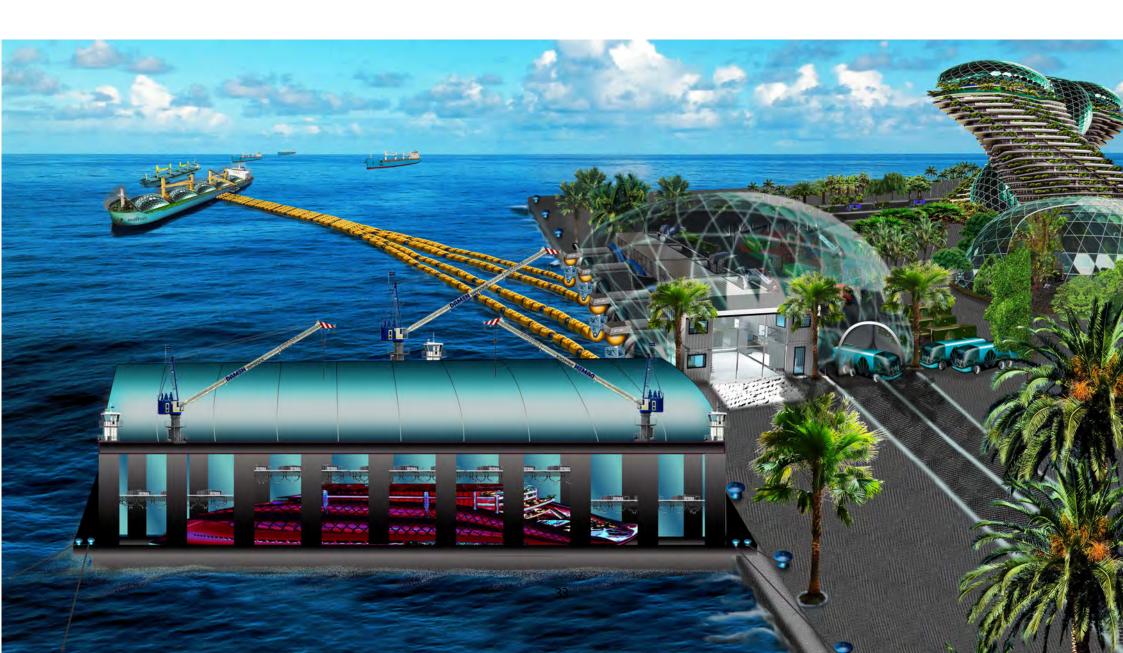

To produce VORTEX mills

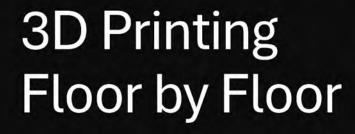

How it works-To additively manufacture metal parts, TITOMIC Kinetic Fusion® begins by accelerating metal particles to supersonic speeds by injecting them into a jet stream. The particles exit the spray nozzle, and upon colliding with the surface, they plastically deform, sticking to the surface and each other. The build-up of these particles rapidly develops into near-net-shape metal parts.

27. 3D PRINTER MIXED BATTERIES

300 TIMES STRONGER SUPERSTRUCTURES

10% OF WHIGHT

Ai managed Robot 3D Kinetic Fusion Printing Platform

3D PRINTER FLOATING DOCK PLATFORM RAILWAY CONSTRUCTION

High-Tech and speed suspense trains logistics installed for ensuring the public and goods transport

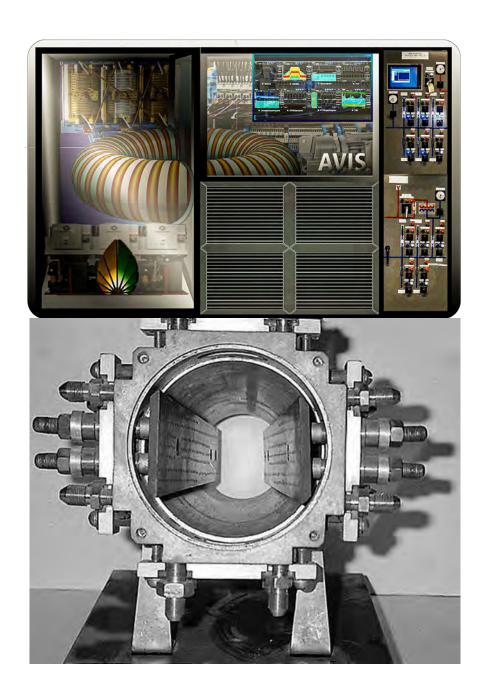

28. TURBINE COMPRESSOR DEPARTMENT

All pipes from compressor maintained to VORTEX machines under pressure approx. 10 Bars In 3D Printed high pressure 1,00 diameter pipelines for interim air storage, total 10.000 m3 to secure air flow

29. HMD POWER DEPARTMENT AND LOGISTIC

The technology description and output production

The active working weight of the prototype dynamo (torus + water) is about 900 kg. The diameter of the torus is approximately 2 meters. Thor - impact - durable optical polystyrene from two halves.

Single crystal barium titanate (BaTiO₃) is sprayed onto the inner channel of the torus.

Water was purified to a specific resistance of 18 M Ohm / cm.

To start the dynamo, 2 capacitor banks with a capacity of 10 F each were used. The total capacity is 20 kilojoules.

The energy of the starter battery is to provide the initial movement of water (acceleration and excitation) - 20 kJ, voltage of 100,000 volts. Partially ionized water is ionized by a high-voltage discharge through 32 electrodes (2 kilograms of palladium). The electrodes are made of palladium tubes with a diameter of about 5 mm. Using these electrodes, the dynamo "ignites". 32 electrodes are mounted evenly in the torus of the generator.

Through the field windings, an alternating magnetic field is created that moves water in one direction inside the toroid. Electromotive force is created by electromagnetic induction in individual windings. The cooling system of the generator housing was a closed circuit with circulating purified water. The torus temperature was maintained no higher than 55 degrees Celsius using a heat exchanger. The average output power under load was 220 volts x 6800 amperes = 1490 kilowatts. The current is constant. Periodically, it rose to 2,500 kilowatts. Depends on the cooling of the generator.

30. PRODUCTION ENERGY SERVICE & MANAGEMENT DEPARTMENT

Plan 01-1. OG, 08.02.

central air compressor 1 item 4500.0 mg per min.

HMD* hydraulic generator of dynamic electric power 2.8MWh

100 Generators totally 280MWh *102.200MWh year

Industrial HMD Generators 20MWh

50 Generators totally 1000MWh*365.000MWh Year

Volt 440

transformer substation 1 Siemens

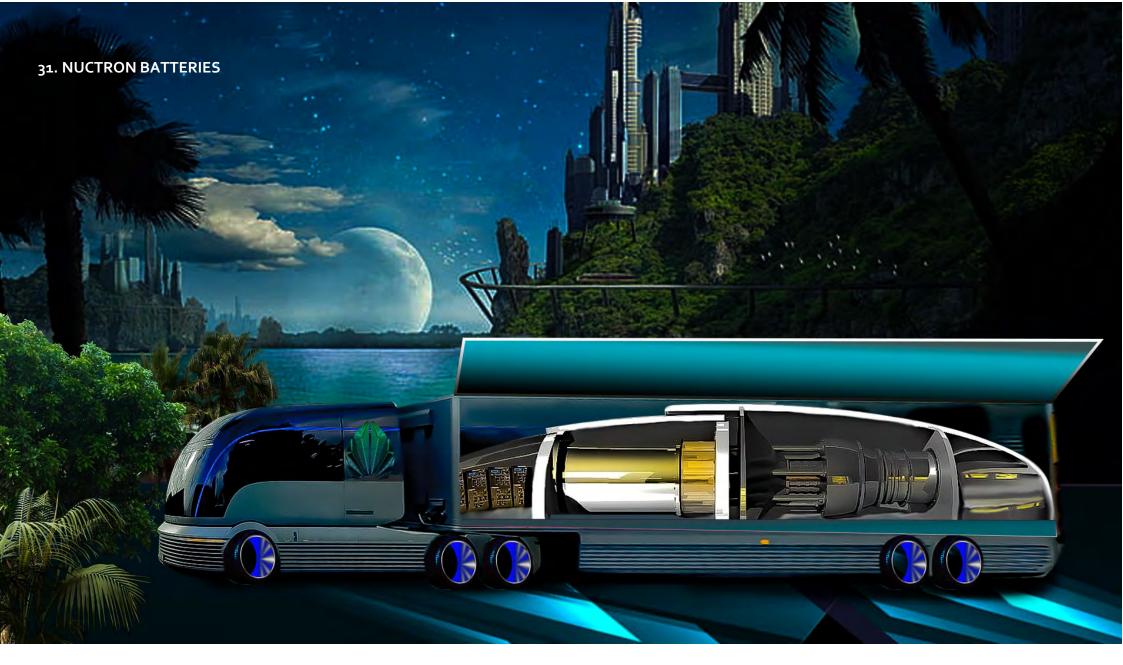

consumption from the city (port) external electric o

network (emergency) available on standby

100 HMD Generators 2,80 MWh 50 Generators totally 1000 MWh Total 280 MWH

*HMD operates on heavy water (D₃O) circulated in and ring reactor is not a source of harmful radiation and waste emission "ZERO"

POWERFULL NON-TOXIC NucTron BATTERIES TO BE DELIVERED INSTANTLY
TO WHEREVER NEEDED FOR CITIES & INDUSTRY

32. LABORATORIES DEPARTMENT

Waste input material controlling Valuation and electronic distribution

Nano Powder output material controlling electronic switchboard for distribution

Composite experimental laboratories

University interaction for new composite materials research

Selection laboratory for 3D kinetic fusion printers

33. FIRE SAFETY

Generally, fire measurements Structural fire protection is a preventive fire protection measure. It aims at preventing the further propagation of Taking care off fires. Its maxim is "divide and conquer" ("divide et impera"):

> Accessibility for the fire brigade, protection intervals between buildings and installations, fire walls between adjacent buildings, construction materials and construction parts made of hardly combustible material, high fire resistance of girders and load-bearing parts, creation of fire compartments to limit smoke and heat propagation sealing off installation ducts and channels, short and safe escape routes and emergency exits, if possible, separate ignition sources from combustible materials, lightning protection systems Manufacturing a door with a predefined fire resistance value. But making sure that the fire door will indeed be locked tight in case of fire.

As AVIS Team member you have liberty working from home at your convenient time or you meet your colleagues somewhere at the building. Or maybe at your own working satellite in the tower.

Design criteria and typologies of space adapt to the new working modalities derived of technological development and the information society, in the usual concepts such as the Internet, horizontal organizations, work by processes, causing the ways of working of people in institutions are modified, and the development of new Work spaces.

36. AVIS TOWER OFFICE AND LUXURY APARTMENTS - 3D COMPOSITE CARBON - GLASS - METAL CONSTRUCTION

200 Apartments between 85 to 600 m2 plus garden.

2318 Working satellites

45 Laboratories high secured

2 Server Centre

12 Restaurants

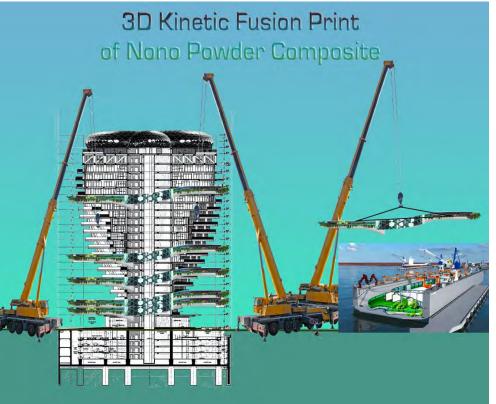

15 Coffee Shops

Indoor Pool

Social leaving area 10.000 m2

1000 parking spaces

Space 110 x110 direct construction area plus garden 12.100m2 plus 4800m2 garden

25 Floors with room high of 4 m Apartment wing b4o x l3o m 1200m2

Central tube 27 m diameter 572m2

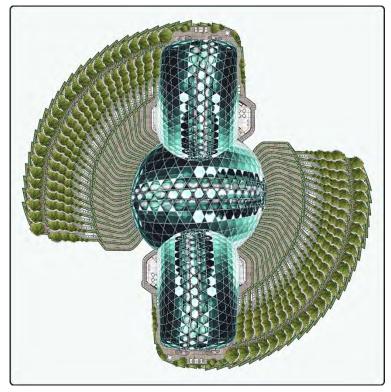

Office screw tower ring 50m diameter 25 floors office 34.775m2 1391m2 each floor offices 15m2 for each person

2300 working satellites

3 Basement laboratories each **16.900 m2**

Heavy working laboratories **50.700m2**

68

Each wing 1200m2 3D printed in bionic format

10% of weight and 100times stronger than conventional construction formatting

Automatic tropical garden system

Earthquake secured

90 days construction time

Own electric power production

Fire resistant

8 lifts person 2 lifts material

2m person traveling band in screw up

2m person traveling band in screw down

3D kinetic fusion robot printers using carbon ceramic-glass-metal composite sourced from garbage

Printing facility up to 200m long and 50m wide

Movable swimming platform

Multifunction

For ship printing

Floor printing

Large construction use

37. AGRICULTURE DEPARTMENT

Type of greenhouse 5 Ha tropical doom formatted glass composite 3D printed

Roof glass skin 3 D printed Photovoltaic skin, hermetic closed

Area ±50.000² including service area

Ventilation NON, hermetic closed

Technology High performance Photovoltaic printed skin Temperature Permanent 40°+/- tropical temperature

Humidity 95%

Agriculture products Jackfruits & vegetables and technologies are capable to replace the animal farming

industry

Quantity 30.000.000 kg/year

38. AQUACULTURE DEPARTMENT

Fish growing basin Carbon composite 3D printed Roof glass skin 3 D printed Photovoltaic skin

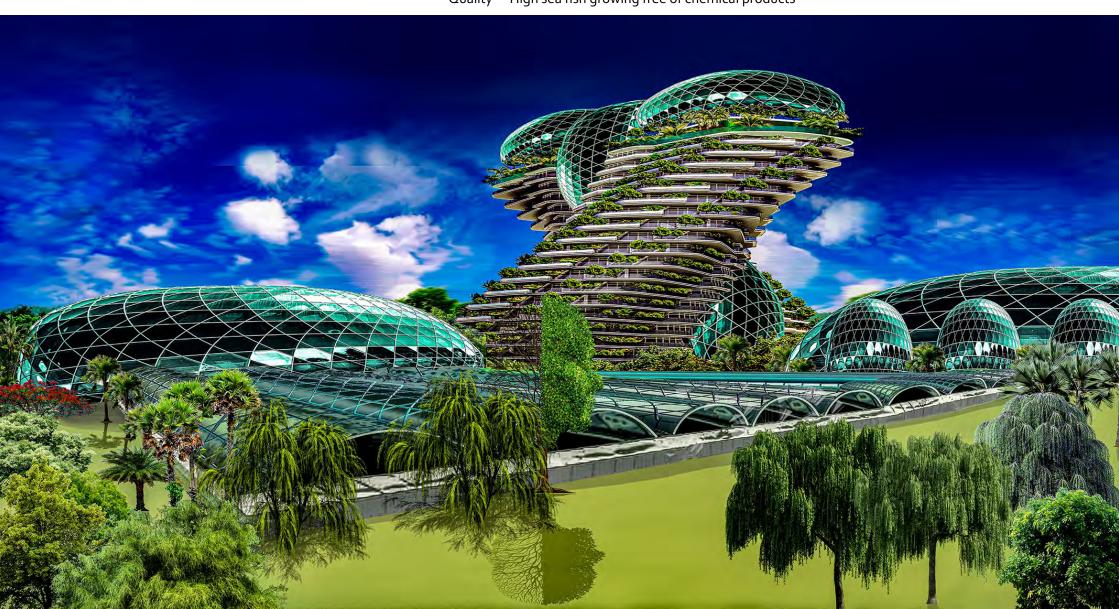

Dimension ±140x6x6

Growing lines 10

Capacity 10x250 mt/y

Temperature Permanent 20° to 22°

Quality High sea fish growing free of chemical products

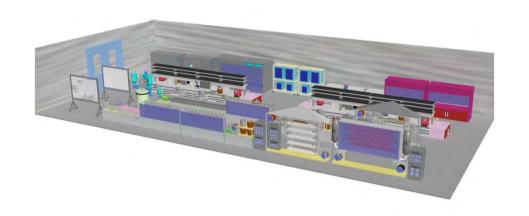

Design for Pilot-Scale Lab in COLOMBIA

AVIS ATOM THREADS PLC

Design for Pilot-Scale Lab for ATC in HYU, Korea [Series A]

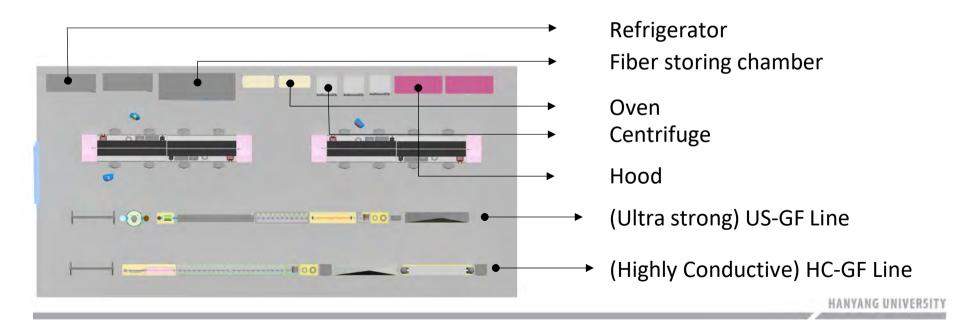

Size: = 12 X 25 m^2

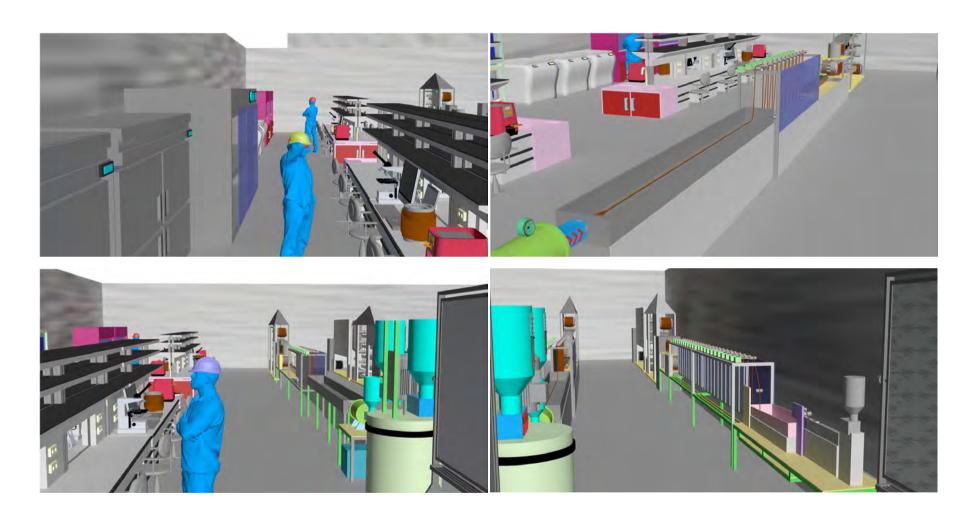

= 39 x 82 ft²

= 3230 ft²

Productivity Scale: 0.5 ~ 1.0 km long fiber

HANYANG UNIVERSITY

40. HOST LOCAL TECHNOLOGY DELIVERY FOR THE POPULATION AND LOCAL INDUSTRY

Mining technologies for organic non harmful save and health mineral extraction & for recycling of old landfills and toxic waste dumps

GOLD 3D PRINTING TECHNOLOGY

PURED OUTPUT PRODUCTS

TITAN + a plant for the production of metal powders and micro powders and ceramic metal magnetic powders and powders for special 3D-Printing.

BIO + a plant for biotechnology, focused on the production of biologically active substances (BAS) from vegetable raw materials, biological crop protection and nutritional supplements.

POLIMER + a plant for deep processing of lignin-containing raw material, production of new polymer materials, BAS and biofuels.

CERAMIC + a plant for production of mineral micron powders, pigments, metallic powders for 3D-Printing, activated and functionalized building mixes, additives in concrete.

PRECIOUSES METALS like gold, silver extracted direct from the mining. The gold containing rocks must be cut in 8 cm diameter and treated with the industrial Vortex. 15 metric tons each hour applications available.

UNSORTED WASTE treatment plant for municipal, industrial and toxic waste is a reach source of prime material for new composite structures for 3D-Printing.

INTERIMS FACILITIES DISTRIBUTION BASED ON CONTAINER MUDULES

TO BE USED AS PRIME MATERIAL FOR

NANO POWDER FOR THE NEXT GENERATION OF 3D PRINTED PRODUCTS

41. ECONOMIC BUDGET

No	Name	Unit	Summary
1	The total area occupied by the plant	thousand m2	91.000
2	Volume of powders produced, per year	million tons	15
3	Volume of products by 100 TITOMIC 3D printers, per year	thousand t / year	TBA
4	The total number of employees, people	men	2500
	Including working people	women	1000
5	Energy carrier's consumption		
		housand m3 per year	2.365.200,00
		housand m3 per year	728,00
	Technical water consumption	thousand m ₃ / year	10.00
	Electricity consumption	MWh / year	113.880,00
7	Cost of production facility	€	50.000.000,00
8	Cost of harbor installation	€	25.000.000,00
9	Cost of Green house facility	€	45.000.000,00
10	Cost of Algaculture facility	€	28.000.000,00
11	Cost of AVIS Tower	€	260.000.000,00
13	Cost of Infrastructure	€	20.000.000,00
14	Budget Construction cost Phase 1	€	418.000.000,00
a	Budget Simmtronics facilities	€	500.000.000,00
b	Budget Graphene installation and Laboratories	€	500.000.000,00
15	Cost of production Equipment	€	300.000.000,00
16	Cost of laboratories	€	25.000.000,00
17	Software & Hardware	€	150.000.000,00
18	Cost of Prototyping 3D printer streets	€	150.000.000,00

20	Budget Equipment Phase 2	€	635.000.000,00
21	Gate fee income	€	1.500.000.000,00
22	Trades of nano powder 15.000.000mt price range €50,00 to €300,00 per kg		1.000.000.000,00
23	Trades of industrial products	€	50.000.000,00
-5 24	Trades of power production surplus (353.320.000KWh x€1,25)	€	416.000.000,00
25	Trades of organic food 30.000.000,00 kg	€	13.000.000,00
26	Trades of high sea fish 2500mt		8.500.000,00
27	Cross income		3.087.500.000,00
28	Cross expenses		179.250.000,00
29	Cost finance & Banking		70.000.000,00
30	Net Benefit	€	2.838.250.000,00
31	Budget Construction Phase 3	€	15.000.000.000.000

42. REGULATORY DOCUMENTS

All works at the plant are organized in accordance with the main EU directives when dealing with waste:

The Waste Framework Directive (2006/12 / EC).

On the protection of the environment and soil when using sewage sludge in agriculture (86/278 / EEC).

On hazardous substances in batteries and accumulators (91/157 / EEC).

Hazardous waste (91/689 / EEC, 94/31 EU).

Supervision and control of transboundary movement of waste (Regulation 259/93 / EEC).

On the waste of electrical and electronic equipment (2002/96 / EC).

Landfills (199 9/31 / EC).

Waste incineration (2000/76 / EC).

Incineration of hazardous waste (94/67 / EC)

Waste statistics (2150/2002 / EU).

On the disposal of used oils (75/439 / EEC).

On the limitation of the emission of certain pollutants into the air by large combustion plants (2001/80 / EC).

Reporting (91/692 / EEC)
