SoCo Management Group Expands Managed Compliance Services for Multi-Site Operators

Expanded support helps operators centralize compliance activity, documentation, and vendor coordination

May 12, 2025

ELGIN, Ill. - SoCo Management Group announced an expanded focus on managed compliance services for petroleum marketers, convenience retailers, and other multi-site facility operators seeking a more coordinated approach to regulatory and operational requirements.

The expanded service model is designed to help operators manage recurring compliance activity across multiple locations, including alarm and monitoring coordination, inspection and walkthrough support, notice-of-violation and return-to-compliance documentation, recordkeeping, vendor follow-up, and ongoing status reporting.

Rather than treating compliance as a series of disconnected tasks, SoCo works with customers to organize information, identify open items, coordinate responsible parties, and maintain a clearer view of what requires attention across a portfolio of facilities.

The company's approach combines industry experience with practical process management, giving customers a single point of coordination while allowing existing internal teams and service providers to remain part of the solution.

The expanded managed-services focus supports SoCo's broader mission of helping customers simplify facility operations, strengthen accountability, and make better use of the information already being generated across their sites.

About SoCo Management Group
