

How LifeFone Works

1 Summon Help

Press the personal help button on your pendant or wristband. LifeFone's Fall Detection Service includes a pendant which can summon help for you automatically in case of a fall. If you choose LifeFone's mobile option, the device contacts the LifeFone monitoring station with a push of the button or fall detection signal and notifies LifeFone of your location.

2 Immediate Assistance

You will be connected to a LifeFone Care Agent who will access your Emergency Care Instructions and stay in contact with you until help has arrived.

3 Help Comes to You

LifeFone will contact a loved one or your local EMS depending on your situation. We will then notify your designated family, friends and physicians according to your Emergency Care Instructions.
