» Reduce, Reuse, Recycle !

Recycling and taking care of junk removal is not something most people associate with a lifestyle choice. But it is a choice that benefits everyone. As much as we hear about recycling and the pressing need to "be green" there is still much room for improvement in Europe.

The project aims to raise awareness in various people in partner countries by giving them recycling training. We aim to increase the quantity of separated waste and recycled waste, to decrease the effects of global warming and climate change, to start a social entrepreneurship movement, to help socio-culturally and economically disadvantaged people to find jobs and be entrepreneurs by the help of training courses teaching how to make decorative items out of waste materials.

With this project, people will get rid of the use of disposable habits, and they will be encouraged to think how can they use waste materials for good benefit. People will separate garbage as household garbage, metals, plastics, paper, glass, and contribute to the country's economy and nature.

TBT Consortium

Co-funded by the
Erasmus+ Programme
of the European Union

-
- » **recycling reduces the need for raw materials in the manufacturing process, and recycled products usually require less water and energy to produce than products made from virgin materials.**
-

Importance of Recycling

Recycling is important in today's world if we want to leave this planet for our future generations. It is good for the environment since we are making new products from the old products which are of no use to us. Recycling begins at home. If you are not throwing away any of your old products and instead utilizing it for something new, then you are actually recycling.

When you think of recycling, you should really think about the whole idea; reduce, reuse and recycle. We've been careless up to this point with the way we've treated the Earth, and it's time to change, not just the way we do things but the way we think.

02

DECORATIVE MATERIALS COURSE

from waste for target group which we call the disadvantaged group, to enable them to utilize the wastes and to lead them to reveal their creativity. to enable them to establish a business by providing the necessary training to become an entrepreneur.

01

Start a social movement

by adding people from different groups of society together, by cooperating & involving municipalities, NGOs, civic societies to contribute to the disadvantaged people to become entrepreneurs by giving courses on the production of decorative items from waste.

Our Target Group

Open to all segments of the society: inter-communication between different group of societies
SOCIAL INCLUSION of ADULTS: 30+ as majority

- Families, Residents
- Migrants
- Refugees
- Unemployed Individuals
- Adults w/low financial situation
- Adults in rural areas w/lack of opportunities
- Disadvantage young people (minor rate)

TC BASAKSEHIR BELEDIYESI

Basaksehir Municipality is a region with developed local economy, modern agriculture and livestock breeding, well-established technical and social infrastructure, creating conditions or sustainable development. Some of the important priorities include to overcome the negative trends in the demographic and economic aspect, by improving the conditions for development of the local economy, achieving sustainable economic growth by promoting local potential and enhancing the quality of education, improving the quality of life by creating conditions for effective employment, social inclusion, accessible and quality health care, culture and sport.

Basaksehir Municipality is a city of high prestige for cultural and historical development. Our common goals are achieving sustained convergence between people from different social groups in a multicultural environment. Our leading principles are expressed in the achieved results working in close cooperation and continuous dialogue with regional and local authorities, i.e. local schools, kindergartens, other cultural centres, NGOs etc. We believe that the key to success is to involve as many as possible people in activities promoting mutual understanding, equal rights, good values, tolerance, fighting stereotypes

Başakşehir Municipality was established in 2008 by Law No. 5747. Başakşehir, one of the new districts of Istanbul; Altınşehir, Şahintepe, Kayabaşı, Güvercintepe, Başakşehir, Başak, Ziya Gökalp, Bahçeşehir 1. Part, Bahcesehir 2. The part consists of neighborhoods and the village of Shamlar. Our Municipality consists of 20 directorates. Total employs 2300 staff references It covers an area of about 104.33 km². Basaksehir Municipality is a member of the following associations: Marmara Belediyeler Birliği.

FUNDACJA MODE - MOVE AND DEVELOP FOUNDATION

We are inspired by the youth. Unfortunately, not all young people are handed equal opportunities during their transition into adult life. This is why MODE aims to support their development throughout the education process and the early stages of professional careers. Sometimes, participation in just one project helps youngsters look at the world around them from a different perspective and realize that it is full of opportunities.

Apart from contributing to professional growth, our goal is to foster civic virtues and encourage young people to be active members of their communities.

We firmly believe in the importance of human rights and democracy – without them our world would be a grim place. Hence, promoting these values is a core element of every initiative we undertake.

MODE bases its work on solid expertise that its founders and employees have developed throughout many years of work in the non-governmental sector. We offer effective communication, professionalism and meticulous attention to every aspect of a project – crucial elements that determine the outcomes of any initiative. After all, the satisfaction of all involved stakeholders is indispensable to long-term cooperation.

<http://www.mode.wroclaw.pl/>

Associació Cultural i Deportiva La Foia

ACD La Hoya is Spanish Cultural and Sport association is based on the principles of cooperation, integration, environment protection, solidarity, humanity and universal human values and promotes an environment in which the community will be able to create, think, realize their ideas and build positions and reactions on important issues.

Develop activities in the rural community as art, sport and culture, also dedicated to the successful implementation and participation of European projects to bring the youth and senior Europe closer.

The main aim is to give the community possibilities to spend their time (Sport, arts, workshops, Culture, Europe) , to support bottom up initiatives of the community, improve social work and facilitate the integration of young and adult people into society especially those of rural areas by involving them in our work, and encouraging their creative spirit that helps increasing youth and adult participation in both local community and society in general.

Our target group are kids from 4 years olds till adults, we are supporting the integration of people from rural areas, few opportunities and from disadvantage situations, to give a better opportunity to get a positive and varied personal development.

The organization is divide in 4 areas:

- SPORT;
- ART;
- YOUTH CENTER;
- EUROPE

ASSOCIATION FOR EUROPEAN COOPERATION DEVELOPMENT AND COMMUNICATION

CODEC Europe stands for the Association for European Cooperation, Development and Communication.

The mission of our organization is to promote the European policies and values that will improve the economic and social well-being of people around the world.

At CODEC you will meet design thinkers, project managers, communicators, education specialists, technology and social media experts that can respond to your organisation's needs and understand the social challenges you wish to address.

Our core team consists of specialized and versatile staff of different nationalities and backgrounds, from business and administration to education and engineering. Each day, they bring their specific expertise, diverse cultural insights and joint commitment to social change – to everything we do. Our global network of partners and collaborators enables us to develop projects anywhere in the world.

Comune di Marineo

Marineo leads a network of municipalities involved in the project “Progetto di inclusione per la coesione nell’Alta Valle dell’Eleuterio” (Marineo, Misilmeri, Godrano, Villafrati, Cefalà Diana, Corleone, Piana degli Albanesi, Santa Cristina Gela, Bolognetta) – relating to Programma Operativo Nazionale PON FESR – “Sicurezza per lo Sviluppo” obiettivo convergenza 2007-2013 included in the project proposal funded by Obiettivo Operativo 2.1 which aims at the creation of Multi-purpose Centres for immigrants intended to involve several measures that aim to foster their social integration. The Multi-purpose Centre is located in Marineo, 1, Via Cardinale Corradini.

Following the partnership with several third-sector institutions, since 2016 Marineo Municipality is involved in projecting and implementing cultural, leisure, sport and educational activities, aiming at fostering multiculturalism and empowering immigrants social and professional integration.

Several projects in Marineo have been public funded such as, for example, the construction of a multicultural day centre for adults in December 2010 and an integration project co-funded by Poste Italiane.

September 2020: Marineo, among the first municipalities in Sicily, abides to the Covenant of Mayors (promoted by EU Commission), and commits to go beyond 20-20-20 i.e.:

-20% carbon dioxin emission

+20% of renewable energy

+20% energy efficiency

TURKEY - BAŞAKŞEHİR MUNICIPALITY**7 MOBILE WASTE COLLECTION
CENTER**

It is aimed to increase awareness of recycling and ensuring that the wastes are separately collected according to their types in the areas of the district where people come together and do activities (parks, gardens, shopping mall, hospital, local authority building etc.)

Mobile Waste Centers have been established to collect 7 different types of waste in 30 different social activity areas within the district. Paper-Plastic-Battery-Vegetable Oil and Electronic waste collection is provided at these waste centers

**For More**

FERTILIZER PRODUCTION

It is aimed to produce fertilizers from organic wastes.

Organic wastes generated in areas such as indoor and outdoor markets, food production facilities, and municipal buildings within the boundaries of our district are collected by the special vehicles of our municipality and turned into fertilizer in our compost device.

Worm castings production:

In 2020, it was decided to produce worm manure, saying that we are also there to increase the use of natural fertilizers, which will rival the increasing chemical fertilizers in recent years, and thus reduce the use of chemical pesticides and fertilizers that adversely affect human health by increasing organic agriculture. In this context, 2 pools were established in the area where the compost unit is also located. In 2020, around 2,000 kg of worm manure was obtained.

POLAND – FUNDACJA MODE - MOVE AND DEVELOP FOUNDATION

>> Stena Recycling

Stena Recycling is a company that provides complex solutions in the fields of waste management, recycling, and environmental services in Poland and Scandinavia.

Main focus of Stena Recycling:

Circular economy

an economic system aimed at eliminating waste and the continual use of resources. Circular systems employ reuse, sharing, repair, refurbishment, remanufacturing, and recycling to create a closed-loop system.

It allows to minimize the use of resource inputs and the creation of waste, pollution, and carbon emissions.

Stena Circular Economy Award is a contest that promotes solutions based on circular economy and good practices in the field of improving productivity of reusable, recyclable resources.

The good practices, as well as ideas of interesting initiatives, and tips on how to make your company more eco-friendly by introducing circular economy solutions may be found in an e-book:

<https://www.stenarecycling.pl/stena-circular-economy-award/ebook-scea/>

(available only in Polish)

New life for used shoes

Stena is also a partner in recurrent actions of collecting used shoes for the homeless. During its two editions, 21,000 pairs of shoes were collected. The shoes were then delivered to the **WoshWosh** company, by whom the collection was organized. The company cleaned, repaired, and renewed them, so that they may be used again by those in need.

WoshWosh

is a Polish company based in Warsaw that offers complex cleaning and renewal of shoes to all interested, bringing the idea of zero waste not only to those, who want to donate their shoes, but also to individuals, who want to be able to enjoy their favorite pair longer.

>> SUEZ

production of alternative fuels

SUEZ is a company that uses certain types of waste in production of alternative fuels.

The energy acquired by burning such fuels is used in the clinker burning process. Due to the high temperature (approx. 1800 C), the use of alternative fuels is almost emission-free. It also allows to lower the emission of greenhouse gases as it serves as a substitution of fossil fuels.

>> *Composters available for inhabitants of Wrocław*

Composters are special containers for recycling organic materials. They make it possible to reduce the amount of waste, providing at the same time a source of natural fertilizer that may be used to improve the quality of soil.

In order to promote the idea of making your own compost among the inhabitants of Wrocław, the city is offering free composters to the owners of houses with a garden and educational institutions. By April 2021, 1981 composters were transferred, and 385 are still available.

According to the regulations, each interested person or educational institution has to apply for the lending of a composter and sign a 36-month-long loan agreement. After expiry of the contract, the composter becomes the property of the user.

ASOCIACION CULTURAL Y DEPORTIVA LAHOYA

Renewal of containers

Elche City Council has taken a further step in improving the cleaning of the roads in Camp d'Elx with the replacement of the current containers with 500 new, more efficient, sustainable and larger capacity ones. The Mayor, Carlos González, and the Councillor for Cleaning, Héctor Díez, accompanied by the manager of UTE Elche, Alberto Bleda, and the head of the Elche service, José Luis Orellana, visited this morning the area around the company awarded the contract where the rubbish bins are located and later witnessed the replacement of one of the old bins with one of the new ones in Matola. The councillor explained that these models are made of metal and recycled material. In addition, they are fireproof, have a large capacity of 3,200 litres and are shock and overload resistant.

The mayor also stressed that this renovation represents an investment of 375,000 euros and pointed out that the complete replacement of all the containers will be carried out within two months. In addition, González pointed out that 500 containers for cardboard recycling, 400 for packaging and 2,100 containers for organic waste will be installed in all the districts. In addition, 50 new side-loading containers will be replaced in the city centre, and these will gradually be installed in the rest of the city.

<https://www.elche.es/2021/05/el-ayuntamiento-instala-500-modernos-y-eficientes-contenedores-para-mejorar-la-limpieza-en-los-caminos-rurales-del-camp-delx/>

Co-funded by the
Erasmus+ Programme
of the European Union

The "Recycling Challenge 2021" kicked off on Monday 10th May in the town of Santa Pola. This is a public awareness and information campaign to give a new life to the packaging that is deposited in the yellow (cans, briks and plastic containers) and blue (cardboard and paper packaging) containers, which is set up as a competition between municipalities.

Reto del Reciclaje

The initiative, in which the Department of Agriculture, Rural Development, Climate Emergency and Ecological Transition and the Baix Vinalopó Consortium also participated, rewarded the municipality that managed to recycle more and better their domestic plastic containers, cans and briks in the yellow container.

The 6 municipalities that participated in this edition of the "Recycling Challenge", integrated in the area of the Baix Vinalopó Consortium are: Santa Pola, Novelda, Crevillent, Elche, Aspe and Monforte del Cid.

The "Recycling Challenge" was set up as a competition between municipalities in the Consortium to increase the use of the yellow bin by at least 15% on average during the two months following the campaign period, comparing these contributions with those of the same period in 2020. The prize was a cash award to a previously selected social NGO.

The campaign began on 10 May in Santa Pola and lasted until 29 May 2021, when it ended in the town of Elche. A vehicle identifying the campaign, the "Recycling Van" visited each of the 6 selected municipalities in the management area of the Baix Vinalopó Consortium.

<https://elretodelreciclaje.com/>

CLEAR RIVERS Concept / The Recycled Park Project

The Nieuwe Maas River carries plastic litter from inland to the sea. The Recycled Park Project collects the plastic waste in the Nieuwe Maas so that it no longer pollutes the North Sea. The collected material is recycled into building blocks. These are combined into floating platforms and form the basis for a new green area.

These floating parks add value to Rotterdam and fulfill an ecological role in the river water. The building blocks are manufactured in such a way that nature can grow on the upper side, and because of the rough finish on the underside, it also stimulates (underwater) life.

[Source](#)

Rotterdam Circularity Programme

2019-2023

Rotterdam has expressed its ambitions in the field of the circular economy. After all, large urban areas offer a perfect opportunity for a circular economy. Although accounting for only a small share of the land surface area, they are responsible for virtually all commodities consumption. This is further enhanced by the port, with all its imports and exports, and industrial consumption of commodities.

ROTTERDAM
AS WASTE-TO-VALUE
HUB

Rotterdam City is working to reduce waste and change citizens attitude to waste. Working to increase the number of jobs related to the circular economy. And, finally, viewing products, services, methodology and the design of the city through circular glasses, to find out how they can do things differently at the forefront. Striving for a Circular Rotterdam – together.

A bench made out of yoghurt pots, butter dishes and plastic bags

In 1989, the four founding partners of Ekol (Kempense Steenkoolmijnen, OVAM, LVM and Eurobox) started a pilot project with which they wanted to provide the answer to a pressing ecological issue. In today's consumer society, the ever-increasing number of plastic packaging is resulting in an ever-growing waste mountain. The solution: teaching citizens to sort plastics and recycle them.

For consumers, the distinction between PET, PE, PP and PVC plastics is, however, unclear. Plastic foil, butter container, strawberry punnet or flowerpot - as far as the citizen is concerned, they are all plastic. That's Ekol developed machinery from the start that processes highly-contaminated, mixed streams of household plastic waste. Only then could we use a simple approach to sorting. This is a top priority for the ECO-oh! Group. At ECO-oh!, we are constantly innovatively creating and designing new products that meet the needs of avid gardeners and public authorities. These are products that allow you to creatively and flexibly design gardens, parks or squares.

Recycle park in Hoogstraten

Every resident of Hoogstraten Municipality can bring any recyclable waste to the Container park. You can access the park using your electronic ID. Every resident has also specific amount of recyclable waste they can bring for free in one year. At the entrance of the Container park your car is weighted and you proceed to the specific container number, depending on type of the recyclable waste you are bringing. Before going out from the container park your car is weighted again and you receive a bill depending on the difference of the initial and new weight.

Municipality of MARINEO

» Home Biogas - Domestic Composting

Through the biodigester, both families and small/medium enterprises adopt good circular economy practices, since they manage their wasting on the spot and produce natural resources like gas and liquid fertilizers. The anaerobic bio-digestion produces natural gas which will be employed in the production of power. The Municipality was about to implement a first distribution at the beginning of 2020, prior to the first Covid-19 outbreak; the project is expected to resume by the end of the current year.

*The Municipality efforts and projects aligns on the
<https://zerowasteeurope.eu/> as a priority*

Plastic-free Canteen for kindergarten

In the public facilities of the kindergarten, a space has been made to contain a kitchen where local cooks prepare the meal for the kids and providers of fresh vegetables make the latter available at KM0. No plastic is used in the canteen.

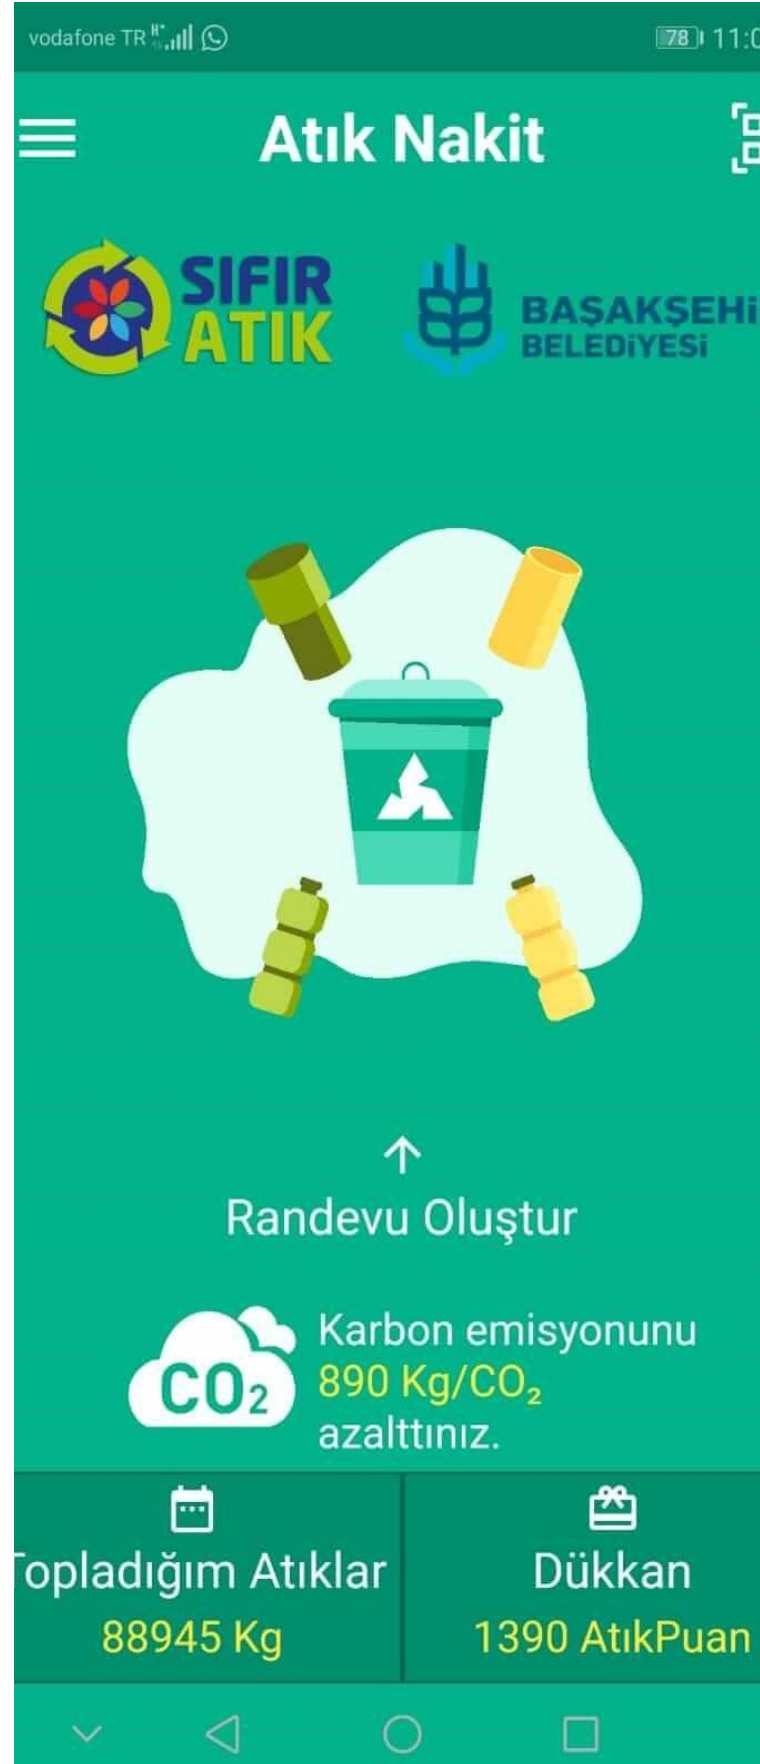

Avrasya Gençlik Gelişim Derneği

>> Waste Cash

The interest in the Waste Cash project, which is the application of Başakşehir Municipality that converts waste into money points, is growing. Başakşehir Municipality, which is one of the leading municipalities in Turkey in Zero Waste, continues to add value to both the sites and the environment with its recycling project "Waste Cash". The sites that sort the waste they collect within the scope of the application and deliver them to the recycling teams earn gifts in return for the points they earn. The two sites that have generated the most waste for recycling so far received their gifts from Başakşehir Mayor Yasin Kartoğlu. Ihlamur Park Site has collected 88 tons of 945 kilograms of waste so far in the application that converts waste into money points. 41 picnic tables were presented to the site management in return for 16,400 points.

It was stated that with Waste Cash, rewards will be made both for the sites and for the colleagues working for it. It will increase the sensitivity of recycling and enable people living on the sites to spend more time by creating more awareness about such issues.

Smart Urbanism

The Smart Recycling Container has emerged as a project introduced by the Istanbul Metropolitan Municipality, encouraging people to recycle and zero waste. Making this application, which is in some parts of Europe, ready to be implemented for the first time locally, Istanbul Municipality has put these containers developed within the scope of "Smart urbanism" in certain areas in Istanbul and recycling the plastic bottle and metal beverage collection container, which will be applied for the first time in Turkey. announced that it is expected to contribute.

With this project, not only recycling but also millions of people living in Istanbul will be returned with the Istanbulkart, which is a transportation card. Those who put pet bottles and metal drinks in the container will be credited to their transportation card. According to what is stated about this, the container collects two groups, namely plastic bottles, and aluminum metal cans. 0.33, 0.5 and 1.5-liter pet bottles and 0.33 and 0.5-liter metal beverage cans will be collected in containers. The price to be paid to the Istanbulkart of each person who throws a plastic bottle into the containers is 2 cents for 0.33-liter 10-gram plastic bottles, 3 cents for 0.5-liter 16-gram plastic bottles, 6 cents for 1-liter 32-gram plastic bottles, and 1.5-liter 45 grams. It will be 9 cents for a plastic bottle, 7 cents for a 0.33 liter 12-gram metal beverage can, and 9 cents for a 0.5-liter aluminum 16 gram metal can. These loaded funds can be used on Istanbulkarts. Money will be loaded directly from the container to the card.

It will not only be limited to this but also follow who throws how much waste and offer an extra reward system accordingly. For example, people who throw 50 plastic bottles and 100 plastic bottles will be offered the opportunity to get free tickets from the city theaters, to enjoy discounted meals at the social facilities of the municipality, and to benefit from different services of the Metropolitan Municipality, with a priority in this regard.

It crushes and stores container waste, and those warehouses are collected by the municipality's recycling collection team and delivered to the relevant unit as recycling material. ISBAK (Istanbul Informatics and Smart Town Technologies Inc.), established by the Istanbul Metropolitan Municipality, completely designs, shapes, and makes the software of these smart container machines.

» *Near-field communication technology which allows two devices to communicate wirelessly. The technology can be embedded in a small tag to facilitate data transfer between nearby mobile phones, laptops, tablets, and other electronics.*

PROJECT INITIATIVE

For dissemination and sustainability purposes of the project a sticker have been developed including an NFC tag.

This initiative will provide to our project the following:

Easy Information Sharing: NFC tags allow quick and seamless sharing of information. By tapping an NFC-enabled device (such as a smartphone) on the tag, users can access data, URLs, contact information, or other content stored on the tag.

Convenience: NFC tags eliminate the need for manual data entry or scanning QR codes. A simple tap is all it takes to initiate an action, such as opening a website, making a payment, or connecting to Wi-Fi.

Compatibility: NFC technology is widely supported in modern smartphones and devices, making it accessible to a broad user base.

Marketing and Promotions: Businesses can use NFC tags as part of their marketing strategies. By placing tags on products, posters, or promotional materials, customers can access product details, discounts, or loyalty program information with a simple tap.

Local Workshop in 3R

Basaksehir Municipality

Our young people, who are willing to protect our seas, forests, energy and water resources, met with Güven İslamoğlu at our "Environmental Detective" seminars. Within the scope of the seminars, attention was drawn to environmental pollution and the role of individuals in recycling. More than a hundred students and adults participated in our seminars, where we aim to instill nature and environmental awareness in future generations and show the power of recycling. In addition, within the scope of home visits in our district, citizens were informed about recycling and recycling hangers were distributed. With the recycling hanger apparatus designed by our municipality, it is aimed to encourage the society to recycle.

» *Fundacja MODE - Move and Develop Foundation*

Target group:

- teachers from vocational schools from small towns in the region
- students of vocational schools from a small town near Wrocław
- students from the school in Wrocław, sector: environmental protection

Workshops for students : The goal of this activity was to provide some insight into the consciousness about climate and how every single one can contribute to slow this process. We spoke about Greta Thunberg and what's Fridays For Future, Zero Waste lifestyle and why's buying and acting locally more important than ever.

» CODEC vzw

Our online workshop was dedicated to creating a New Year Mood in the interiors recycling simple trash stuff. In our case we used a plastic circle from an old bin found in friends' garbage, a child's hoop, old New Year glitter, a duct tape. It took about 40 minutes to create a Holiday Mood lamp of all these things. First we joined the plastic circle with a hoop using a duct tape crossing. Thus a skeleton for the lamp was created. Then we attached the glitter to the inner and outer circle by its sticky part. Then cut the glitter at a higher level in the outer part and lower level in the inner part. The lamp is ready.

» ACD La Hoya

ACD La Hoya developed on the 3rd of December a recycling workshop within the event organised in cooperation with the city council of Elche and various organisations for the volunteer day.

This workshop was focused on children, young people and adults and in which different figures were made with recycled materials, using paper rolls, Christmas decoration figures, we also made bookmarks with recycled materials and we set up an information table about the project and the benefits of recycling at home.

During the duration of the workshop about 300 people passed by and the impact was about 1500 people, as the event was organised in the main square of the city of Elche.

Municipality of MARINEO

On 20th December 2021, the Municipality of Marineo organised the first 3R local workshop on the topic of “Circular Bio-Economy: organic waste valorisation through anaerobic digestion”; through a blended online- face to face modality, 88 young adults students of the VET Institute Don G. Colletto were trained, in Marineo. The workshop aimed at providing trainees with a deeper knowledge of organic waste valorisation through anaerobic digestion, in the frame of circular economy. More specifically, spotlight was given to the agroenergy supply chain and to the energetic biomass valorisation in plants, using anaerobic digestion processes. During the training, some case studies referring to local machines and plants for biogas and digestate production, were presented.

Avrasya Gençlik Gelişim Derneği

In December 2021, Avrasya Gençlik Gelişim Derneği has introduced the THINK TWICE project to the 30 people consists from youth workers, retired individuals, teachers and people interested in topic. The workshop was based on non formal education where residents measure their knowledge regarding 3R and it's importance in sustainable economy. The survey held to the audience after the workshop.

**NEFINIA**

2 local workshops have been organized in Rotterdam with the aim of transferring the knowledge of 3R tools raising awareness in the participants by providing recycling training and best practices.

Target group:

- teachers from VET education centers from different areas of the region
- students from VET education centers from different areas of the region
- entrepreneurs dealing with environmental recycling and environmental protection
- representatives of Rotterdam Municipality

In total 50 Attendants have been successfully registered

» LOCAL WORKSHOPS IN SOCIAL ENTREPRENEURSHIP

Basaksehir Municipality

Workshops were held with our participants who want to step into the field of entrepreneurship using 3R practices. Recycling lessons were held for 6 weeks with participants who wanted to turn this into a profession by recycling and reusing waste. Their creativity was strengthened about in which areas and in which way the wastes can be reused. Afterwards, entrepreneurship trainings were given to the participants for 5 days. They learned how to take what they learned in the recycling lessons they took and the ideas they created to the market. They learned the tricks of entrepreneurship. Afterwards, training certificates were given to successful participants.
