Advanced Woundcare Made Simple

YOU'LL SEE THE DIFFERENCE

One look and it is obvious that ReNuCelz is different. ReNuCelz is opaque and thicker than other grafts. The dry graft is flexible and easy to handle. What you can't see is the benefit of our proprietary processing focused on preserving the quality of the matrix. The growth factor-rich matrix, with an outer basement membrane and epithelial layer, immediately serves as a natural barrier and supports re-epithelialization.

Ideal wound covering options for your challenging cases.

- Natural barrier protects from the environment
- Simple to apply-flexible graft with no rehydration needed
- Physiologic reservoir of growth factors and cytokines

Proprietary processing improves levels of growth factors over dehydration methods¹.

- ▶ Three times higher EGF than dehydrated processing
- ▶ High quality matrix supports cell attachment and migration for re-epithelialization.

In vitro modeling of fibroblasts (green) migration on Renucelz. Epithelial layer in Renucelz is visible as blue punctate staining¹.

Lyophilized
Amniotic
Membrane

Next generation allograft that offers easy-to-use wound care solutions

- ▶ Natural physiological barrier for various applications
- ▶ Optimal preservation of endogenous growth factors

Chronic non-healing
Supports wound closure of chronic diabetic foot ulcers, venous leg ulcers and pressure wounds

Surgical
Enables rapid, non-pathologic healing and remodeling of surgical and reconstructive wounds
