

Unit 4

Lesson 3: What parts do plants need?

New Words: Root - stem - leaf - flower - seed - fruit

Plants have different parts:

Flower

Make seeds to continue the lifecycle.

Leaf

Absorbs sunlight & air to make food.

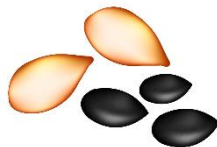

Stem

Holds the plant up & carries the food around.

Roots

Absorbs water & nutrients from soil.

Seeds

Plants need seeds to make new plants.

Fruit

The fruit protects the seeds.

How do people help plants to grow?

Page 13 - 137 Textbook

Pull the weeds
so plants have
more space to
grow.

Put plants by
the window to
get enough
sunlight.

Plant new ones.

Plants need space to grow.

Plants change while growing:

The stems get
taller.

The roots get
bigger.

They grow
more leaves.

People plant seeds so flowers can grow.

People plant trees so we can enjoy their shade and view.

H.W

Match the plant parts to their names:

Stem ●

Roots ●

Fruit ●

Leaf ●

Flower ●

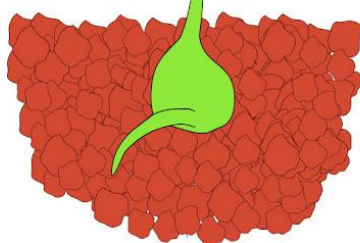

Seed ●

Put (✓) next to the things you can do to help the plants:

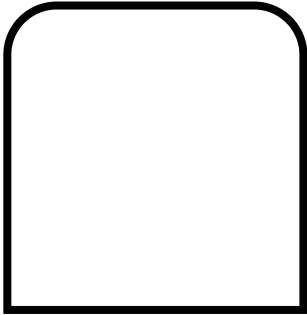

☐

☐

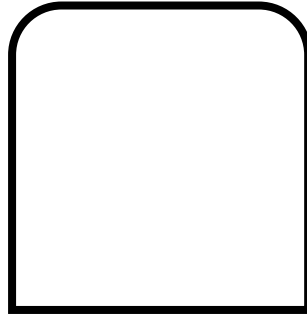

☐

☐

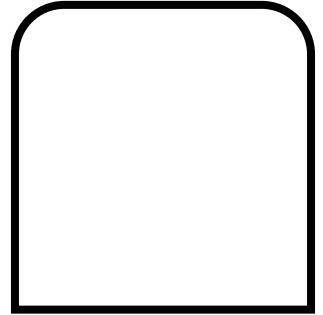

Cut and paste the plant parts next to their jobs:

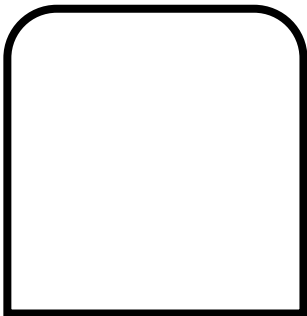

Holds the plant
up & carries the
food around.

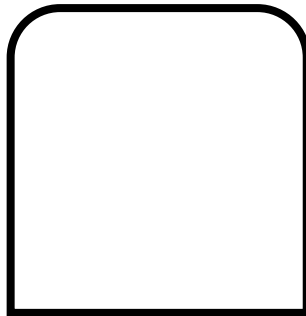

Plants need seeds
to make new
plants.

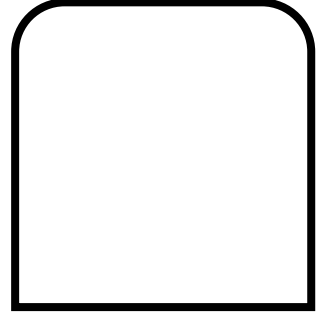

Absorbs
sunlight & air to
make food.

Make seeds to
continue the
lifecycle.

The fruit
protects the
seeds.

Absorbs water &
nutrients from
soil.
