 Tiara Securing Device

It is recommended that CrownClips be custom installed in a permanent manner for the most secure crown experience.

These instructions demonstrate a quick set alternative.

CrownClips offers free custom install if you cannot master this process yourself. (Shipping will be charged.)

**Large (Universe)  
 Monster (Galaxy)**

**Quick Set...  
 Install**

→ Place your crown—upside down on a soft service.

1. **Undo** the group of center rings... (You may need tweezers or needle nose pliers to open the loop—it is like a key ring.) Some products may have the rings left unhooked for your convenience.
2. **Pass** one of the small rings through the rhinestone work on the side of the crown (at the place over the ear.)

Be sure **COMB IS POINTED DOWN**—so that they will be pointed up when you

→ turn the Crown over!  
Pass other small ring through the other side.

3. **Reconnect** each side small ring to the center larger ring. (like adding a key to a key ring).
4. **Secure** the large center ring to the center of the crown. Use the sil-

ver color tie included in the kit. (I fold it in half to double the strength. When you twist the tie... do it several times and roll in down.) Doing this will allow you to

→ wear your hair up or down - and put add stability and torque to the assembly. It **WILL BE LOOSE**. This is normal! Adjustment is next.

5. **Side fit.** Remove the tape that secures the string.
6. Pass each end string through different location on the rhinestone

work... the objective is to create a bit of space between the strings. Then pull to tighten to fit (not too tight!)
