Thank you for purchasing bumper Centre grill for 997.1

Please use this document as a guide only. No liability shall be accepted whatsoever for damaged caused during or after fitment. Please seek the help of a qualify automotive technician if in doubt.

Kit Content

- Grill
- Self tapping screws

Fitting the Grills

1. Refer to side grill kit for bumper removal (or get in contact for this)
2. With the bumper removed
 - a) Place the grill over the backside of the bumper frame then fasten using the screws provided.

Image shown with bumper frame removed from bumper for illustration purposes

- b) The blue dots in the above image indicate suggested screw location, ensure that the screw heads don't protrude beyond the edge of the grill frame (marked by the red dotted line in the image) this is critical as the screw heads will foul the cowl/duct when the bumper is refitted to the car.

- c) If necessary finesse the grill fitment by gently bending the return edges so that they sit as tightly as possible to the frame edges

Before Fitment Finesse

After Fitment Finesse
