

# Tribal Energy Survey

Thank you for your willingness to participate in this survey. The survey is part of Sustainable Engineering Infrastructures and Solutions for Tribal Nations Energy Sovereignty (TES), a federally funded research project. The study aims to understand the communities preferences for the types of energy systems and technologies they are most interested in. Your answers will help us estimate the effects and potential benefits of establishing and implementing renewable energy alternatives in the community to enhance energy sustainability and resilience.

[Click here for survey link.](#)

All your answers are important – it is not necessary at all that you have specific knowledge of the particular technology, energy, nature, or the environment. All responses are kept confidential!

This work is being funded by an EPSCOR grant and is a partnership between Tribal Nations Research Group (TNRG) and University of North Dakota EPSCOR!
