23						
24	This report covers estimates from the State of Michigan only.					
25						
26	Comments (weather, crop development, etc):					
27						
28	Attached are acreage and yield estimates from Michigan's dry bean industry as of July 14. We estimate total Michigan dry bean acres planted for					
29	2022 to be 200,000 acres, a reduction from last year. This year saw a decline in Navy, Light Red and Small Red acres along with a slight increase in					
30	Black Bean acres versus last year.					
31	Michigan beans were planted across two windows for 2022 at the beginning, and end of June, separated by wet conditions. A substantial high-wind					
32	event followed these plantings, forcing some growers to replant in late June.					
33	The first few weeks of the growing season have seen average conditions. After a wetter start to the year, dry conditions and early-stage drought is					
34	beginning to reach Michigan. The timing of these conditions is not a threat to beans as long as it doesn't persist for too long, in which case it could					
35	bring us from a high yield to a more "average" year in terms of yield.					
	Yield is estimated to average 22 lbs/a across all varieties, 23.0 for black beans and 22.0 for navy beans, which if realized would be slightly down					
	from last year but still a strong growing season for Michigan.

21									
22	This report covers estimates from the States of Minnesota, North Dakota, South Dakota and Wisconsin.								
23									
24									
25	Comments (weather, crop development, etc):								
26	Estimates are for planted acreage and do not include losses due to drown out, etc.								
27									
28	The NCBDA has a mandatory Stocks Report which is mandated by the ND PSC. The reports are for Stocks								
29	on hand as of August 31 & December 31. With publication a month after those dates.								
30	Because the NCBDA will have an accurate report for stocks on hand, we did not submit carry over #'s in								
31	this report.
