

Introducing Ferraris Tolenoid C[®]

May 2020

Ferraris Challenge

Ever since the commercialization of electricity, there have been an untapped byproduct in form of electromagnetic field generated by flowing currents in power lines. By harnessing the forgotten and unused electromagnetic energy through electromagnetic energy recycling, Ferraris has opened a new pathway for electric power generation and energy recycling technology for the mankind. Ferraris was founded in a strive to harness the power from a magnetic field produced by power lines and transform it into a reliable and countable power source.

Dr. KOO, who is the founder of Ferraris wishes the investors to set their focus and priority environmental social governance with key focus on providing clean energy produced by Ferraris' products through the magnetic energy over the corporate management of Ferraris. The prime directive of Ferraris is to provide clean energy with no environmental pollution around the world to improve and restore environment for the benefit of current and future generations to come.

We have named Ferraris Inc. in memory of Galileo Ferraris.

I. Introducing Ferraris Tolenoid C[®] Technology

1

1. Ferraris Tolenoid C[®] Technology

A Ferraris technology which harnesses induced electrical energy from the magnetic energy variation produced from the power line regardless of the power line voltage. The world's first technology that only Ferraris has – Linear power scalability(<u>https://youtu.be/Y3IR5djt5hg</u>), input/output power Variation controllability(<u>https://youtu.be/z3OLe21eFGU</u>) and Single digit mass production loss ratio.

Ferraris Tolenoid C[®] is designed, developed and manufactured mainly for the electrical power generator.

The uses of Magnetic Harvesting products

Incoming power lines from the sources.(such as power generation, solar/wind farm, substation, distribution substation and transformer)

Electric devices such as TVWS, WIFI, sensors, monitoring systems, aircraft warning light, CCTV, public light, public WIFI, drone charging station, monitoring robots, EV charging station, lighting fixtures and energy storage system etc.

Key Obstacles of Producing ready-made Magnetic Harvesting products

Ferraris Manufactures ready-made Magnetic Harvesting products

2. Ferraris Tolenoid C[®] Technology - Linear power scalability

4. Ferraris Tolenoid C[®] Technology - Output Load variation / traceability

5. Ferraris Tolenoid C[®] Technology - Performance Evaluation

In the 15 ~ 60A primary current line, Ferraris Tolenoid C[®] produced higher output power (Watt) of 49.73% ~ 107.06% than other companies' core products.

II. Introducing Ferraris Tolenoid C[®]

1. Ferraris Tolenoid C[®] products

• For further information of the products, refer to chapter V. Spec sheets.

2. Four kind of Ferraris Tolenoid C[®]

• Ferraris Tolenoid C[®] can be installed wherever power lines are regardless of its voltage such as high-voltage distribution lines, underground lines.

III. Comparing Ferraris Tolenoid C[®] and its Technology

- 1. Ferraris Tolenoid C[®] is designed, developed and manufactured mainly for the Electrical power generation.
- 2. Linear power scalability Ferraris Tolenoid C[®] can produce up to desired output level by simply adding Tolenoid C[®] module step by step if incoming power line has more than enough power from the desired one.
- 3. Input controllability Ferraris SMPS can control the maximum wattage Tolenoid C[®] power generation through its logics system so that the Tolenoid C[®] produce input power does not exceed maximum desired wattage. (Maximum wattage can be set by the user) #2 and 3 Full-motion video demo <u>https://youtu.be/Y3IR5djt5hg</u>
- 4. Output load variation/traceability Under load variation situations, Ferraris SMPS will produce stable output power the user demands. Any further surplus output power caused by load variation control is managed by Ferraris SMPS's control logics system of the production system. Full-motion video demo <u>https://youtu.be/z3OLe21eFGU</u>
- 5. Even under the simultaneous variation in primary line and load, Ferraris SMPS supplies stable output power.
- 6. Ferraris Tolenoid C[®] is easy and simple to Install or uninstall without switching off a power line and thus minimizes any safety hazard issue.
- 7. Innovative method of magnetic energy harvesting and large-scale system over kilowatt to megawatt level is easily implementable. (Ferraris ERR System)
- 8. Ferraris is the first to have adopted an operational production system to mass produce its products. By utilizing innovative automated production process and quality control, Ferraris has reduced **loss ratio to a single digit**.

2. Ferraris Research efforts

Paper title	Academic conference / Journal	Co-auther
Magnetic energy harvesting from traction return current in railway system	Korea Metropolitan Railway Association (2018 Autumn Conference)	Jay(JA-IL) Koo, Bumjin Park, Chan Joon Park, Ok-Hyoun Jung, Seungyoung Ahn
Analytic Computation of Power Line Voltage Drop Produced by Magnetic Energy Harvesting Device	INTERMAG 2018 (Academic conference)	Jay(JA-IL) Koo, Kibeom Kim, Bumjin Park, Jedok Kim, Seungyoung Ahn
A 1.14 kW Magnetic Energy Harvesting Near Power Line by Considering Saturation Effect	EVS31 & EVTeC 2018 (Academic conference)	Jay(JA-IL) Koo, Bumjin Park, Dongwook Kim, Jaehyoung Park, Yujun Shin, Seung young Ahn, Okhyun Jeong
Design of Toroidal Core for Magnetic Energy Harvester near Power Line Considering Saturation	Joint IEEE & APEMC 2018 (Academic conference)	Jay(JA-IL) Koo, Bumjin Park, Dongwook Kim, Jaehyoung Park, Yujun Shin, Seung young Ahn
Design of magnetic energy harvesting core using saturation effect	Electronic Society of Korea (2018 Summer Conference)	Jay(JA-IL) Koo, Bumjin Park, Dong Wook Kim, Jae Hyung Park, Yujun Shin, Chan J oon Park, Ok-Hyoun Jung, Seungyoung A hn
Application of magnetic field energy harvesting near power line for maintenance sensors in railway system	Korea Metropolitan Railway Association (2018 Spring Conference)	Jay(JA-IL) Koo, Bumjin Park, Yujun Shin, Jaehyoung Park, Jong-Kew Won, Ki Hyun g Kim, Seungyoung Ahn
Optimization Design of Toroidal Core for Magnetic Energy Harvesting Near Power Line by Considering Saturation Effect	AIP Advances 8 (2018 Journal)	Jay(JA-IL) Koo, Bumjin Park, Dongwook Kim, Jaehyoung Park, Kibeom Kim, Hyun Ho Park, Seungyoung Ahn
Design methodology of toroidal core for magnetic energy harvesting based on magnetic field dependence of permeability near power line	MMM 2017 (Academic conference)	Jay(JA-IL) Koo, Bunjin Park, Dongwook Kim, Jaehyoung Park, Hyunho Park, Seun gyoung Ahn
Study on the CT-based wide range current detection system combined with contactless power	Korea Institute of Lighting & Electrical Equipment(2016 Spring Conference)	Jay(JA-IL) Koo, Jong-Kew Won, Dong-Kw an Seo, Jin-Ouk Kim, Hwa-Young Kim, Ok-Hyoun Jung

Joint IEEE & APEMC 2018 Design of Toroidal Core for Magnetic Energy Harvester near Power Line Considering Saturation

V. Spec sheets of Ferraris Tolenoid C[®] products

Tolenoid C[®] (Contactless power supply)

Under 1.30 inches

Line thickness Under 2.48 inches

Split form factor

Tolenoid C® (1.30 / 2.48 inches)

- Tolenoid C[®] convert magnetic energy around power line into electric power form for various electric devices.
- Tolenoid C[®] can be installed into power lines regardless of its voltage such as high voltage distribution lines, underground lines as a form factor of splitable one which make them possible easy install Tolenoid C[®].
- Tolenoid C[®] can save electric device installation cost and time compare to conventional way which requires transformer and complex wiring process for 110 or 220Vac power line.
- Maximize efficiency of induction electricity generation by effective Core design and manufacturing process from Ferraris technology.
- Secure electric power energy generation from 10 ~ 650 Ampere power line.
- Water proof case design. (IP65 ~ IP68)
- Electric power generation capacity depends on the current of the primary power line and this can be controlled Ferraris designed SMPS type.

Specifications	Under 1.30 "	Under 2.48 "		
Primary power line current (A)	10 ~ 650 A			
Primary power line voltage (V)	~ 3	0 kV		
Primary power line wire thickness (inches)	~ 1.30	~ 2.48		
Output current type	AC output			
Working temperature (°F)	- 40 ~ 185			
Waterproof (IP)	IP 65 ~ 68 (KS C IEC 60529)			
Size (W*D*H inches)	5.12 * 3.94* 4.33	6.69 * 3.94 * 5.90		
Weight (Ib)	4.70	7.05		
Case material	PC C	GF 20		

SMPS (Switching mode power supply)

Input : connector to multi-adapter

Output : connector to system

SMPS (12V 20W / 60W)

- SMPS block is a semiconductor based circuit board which convert AC input from Tolenoid C[®] into to a DC output for the user requirement or multi-adapter for multiple Tolenoid C[®].
- Ferraris SMPS block is basically composed of two component. Incoming AC signal is converting into DC signal by regulator sub-block and this DC signal is smooth by advanced SMPS block for stable DC output.
- · Ferraris SMPS block has the following features.
 - 1) Preventing overvoltage, overcurrent, overload feature
 - 2) Line regulation less than 1%
 - 3) Control maximum output controllability
 - 4) Incoming input controllability
- Available IP65 to IP68 case design available.
- Scalable power output capacity is possible depending on customer need.

Specifications	12V/20W	24V/60W	
Input	Output of Tolenoid C [®]		
Output	DC 12V/20W	DC 24V/60W	
Working temperature (°F)	- 40 ~ 185		
Waterproof (IP)	IP 65 ~ 68 (KS C IEC 60529)		
Size (W*D*H inches)	3.54 * 5.51 * 2.36		
Weight (Ib)	1.87		
Case material	PC GF 20		

Multi-adapter

Multi-adapter

- Multi-adapter is a sub-block tool that allows multiple Tolenoid C[®] to be connected and operated.
- This one make system allow output power scalability, such as increasing power from 10 to 40Watt and also reducing the required minimum current of power line for Tolenoid C[®] power generation.
- The multi-adapter has four Tolenoid C[®] connectors and one for each SMPS and Separator.
- For the future usage, Tolenoid C[®] connectors can be added more, such as up to eight.
- Deliver generated power from these multiple Tolenoid C[®] to SMPS block.
- Separator is for safe installing and disassembling Tolenoid C[®] to SMPS block. This is mandatory one for safety.
- You can switch on and off each Tolenoid C[®] by pressing switch even if you connect them up to multiple Tolenoid C[®].

Tolenoid C [®]	Up to 4ea
Separator	For installation/de-installation
SMPS	SMPS connections based on desired voltage and output
Working temperature (°F)	- 40 ~ 185
Waterproof (IP)	IP 65 ~ 68 (KS C IEC 60529)
Size (W*D*H inches)	7.09 * 3.94 * 1.77
Weight (Ib)	2.09
Case material	PC GF 20

Separator

Separator

- The Separator is tool for safe installation or de-installation of Tolenoid C[®] at active power line without shutting down power line.
- The Separator make it possible of demagnetization of Tolenoid C[®] occurred when the Tolenoid C[®] is installed in the magnetic field around the active power line.
- Install or de-installation using physical force or other equipment without the Separator causes a safety problems such as finger jammed in between and there is a risk of injury by cutting surface of the core.
- With Separator on, you can install or de-install Tolenoid C[®] at active power line without physical force or other big tools.
- Be sure to sue the designated Separator for Tolenoid C[®] check product serial numbers.

Specifications					
Working temperature (°F)	- 40 ~ 185				
Waterproof (IP)	IP 40 (KS C IEC 60529)				
Size (W*D*H inches)	1.93 * 2.60 * 1.50				
Weight (Ib)	0.29				
Case material	Plastic				

 Multi-adapter connection terminal • Cable and Connector - Obtain UL & CUL Certification, Waterproof test pass - IP 68

Cable

Internal wiring of electrical electronic equipment
