TVWS Standards

- IEEE (Institute of Electrical and Electronics Engineers)
 - **IEEE 802** standards are a family of standards dealing with local area networks and metropolitan area networks.
 - **IEEE 802.11** is a standard for Wireless Local Area Network (WLAN) with **IEEE 802.11af** being the standard for TVWS
 - **IEEE 802.22** is a standard for Wireless Regional Area Network (WRAN) using white space in the TV Bands

Spectrum Access

Licensed

Cellular,
Broadcast, etc.

Very expensive

Massively
underutilized

Dynamic Access

Secondary use of
licensed spectrum

No barrier of entry
associated with
purchase or lease
of spectrum

Unlicensed

WiFi, Bluetooth,
etc.

2.4GHz, 5GHz

“Once thought unusable,
the unlicensed bands are
some of the most valuable
bands in the world”

FCC Commissioner Michael O’Rielly

What is TV White Space Spectrum?

Unused TV-band channels

Beachfront Spectrum

Sub-GHz

Abundant

Unlicensed

for wireless broadband

DELIVERING FIXED WIRELESS BROADBAND OVER TVWS

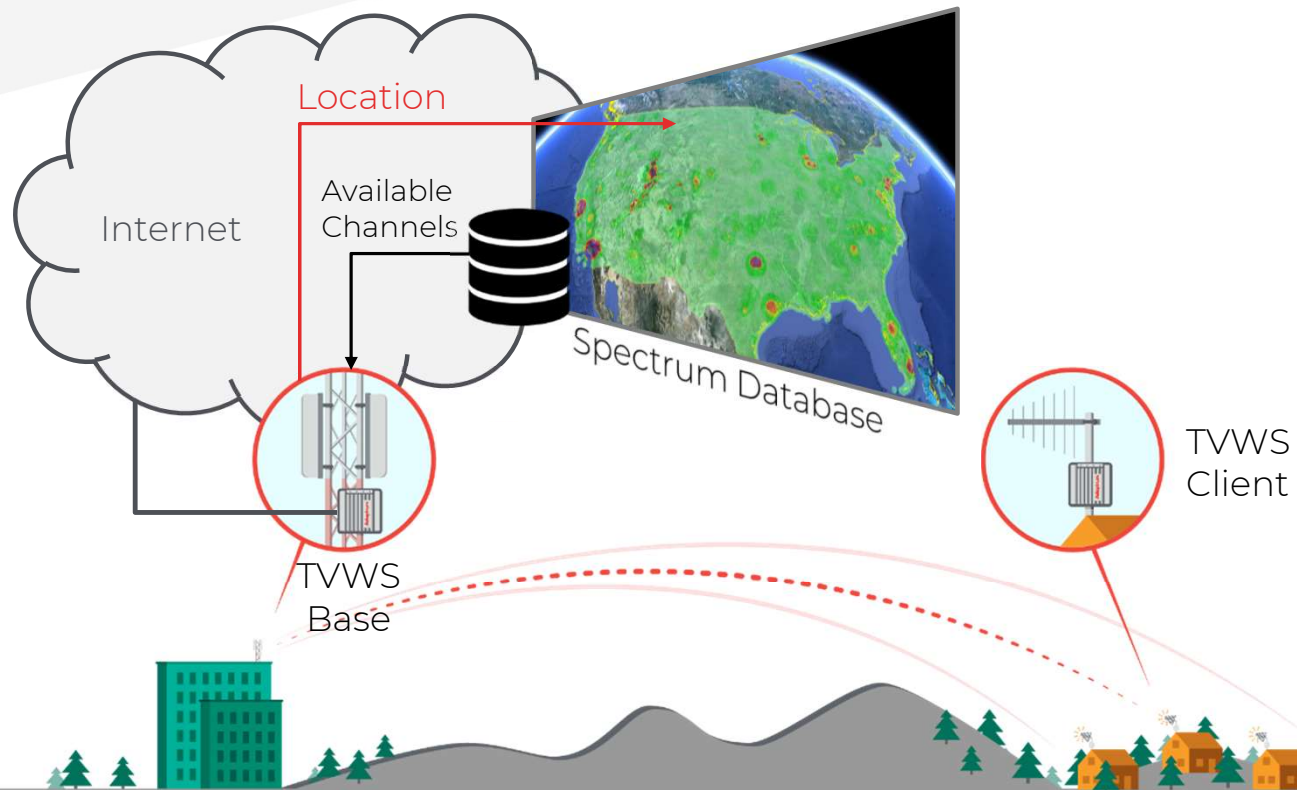

TVWS Base & Sector Antenna

TVWS Client & Directional Antenna

Dynamic Spectrum Access

Frequency agile radios dynamically operate across entire TVWS band

Adaptrum Overview

About Adaptrum

Adaptrum is a pioneer in dynamic spectrum access technology that enables access to unused and underutilized spectrum in the worldwide TV bands and beyond.

Our Mission

Empower next generation wireless network operators to use unlicensed and/or dynamically licensed spectrum to serve billions of people and tens of billions of devices globally

ADAPTRUM DEPLOYED IN OVER 30 COUNTRIES ACROSS 6 CONTINENTS

Product Overview

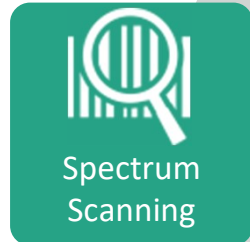

ACRS2 — B1000

- Single Radio Base station
- Ideal for low density rural deployments

18
Mbps

10W
EIRP

Base Antenna 360deg sectorized coverage

11
dBi

90°
H-BW

0°/8°
Downtilt

Single
Port
Dual
Port

ARC 2.0 KIT

1. ACRS 2.0 unit (“BASE” or “CLIENT” per label on rear)
2. ACRS-to-antenna cable (only with receipt of LP45F antenna)
3. Ethernet cable weather-resistant boot
4. PoE
5. ACRS mounting bracket
6. U-bolts (2)
7. Bracket-to-pole mounting hardware (6 each nuts, split washers, flat washers)
8. ACRS-to-bracket mounting hardware (6 each Philips head screws, split washers, flat washers)
9. International power cord
10. contents sheet

Client Antenna Easy to point high-gain yaggi

11

dBi

65°

H-BW

- Industry Leading Long-Range Non-Line-of-Sight Performance
- Rural Broadband Solution
- Built-in spectrum sensing

Typical Fixed Wireless Client Deployment

TVWS Outside / WiFi Inside

ACRS2: Point to Multi-Point

3 x ACRS2-B1000 Base Station at Tower site

Non-LOS TVWS
over the air link

← →

← →

← →

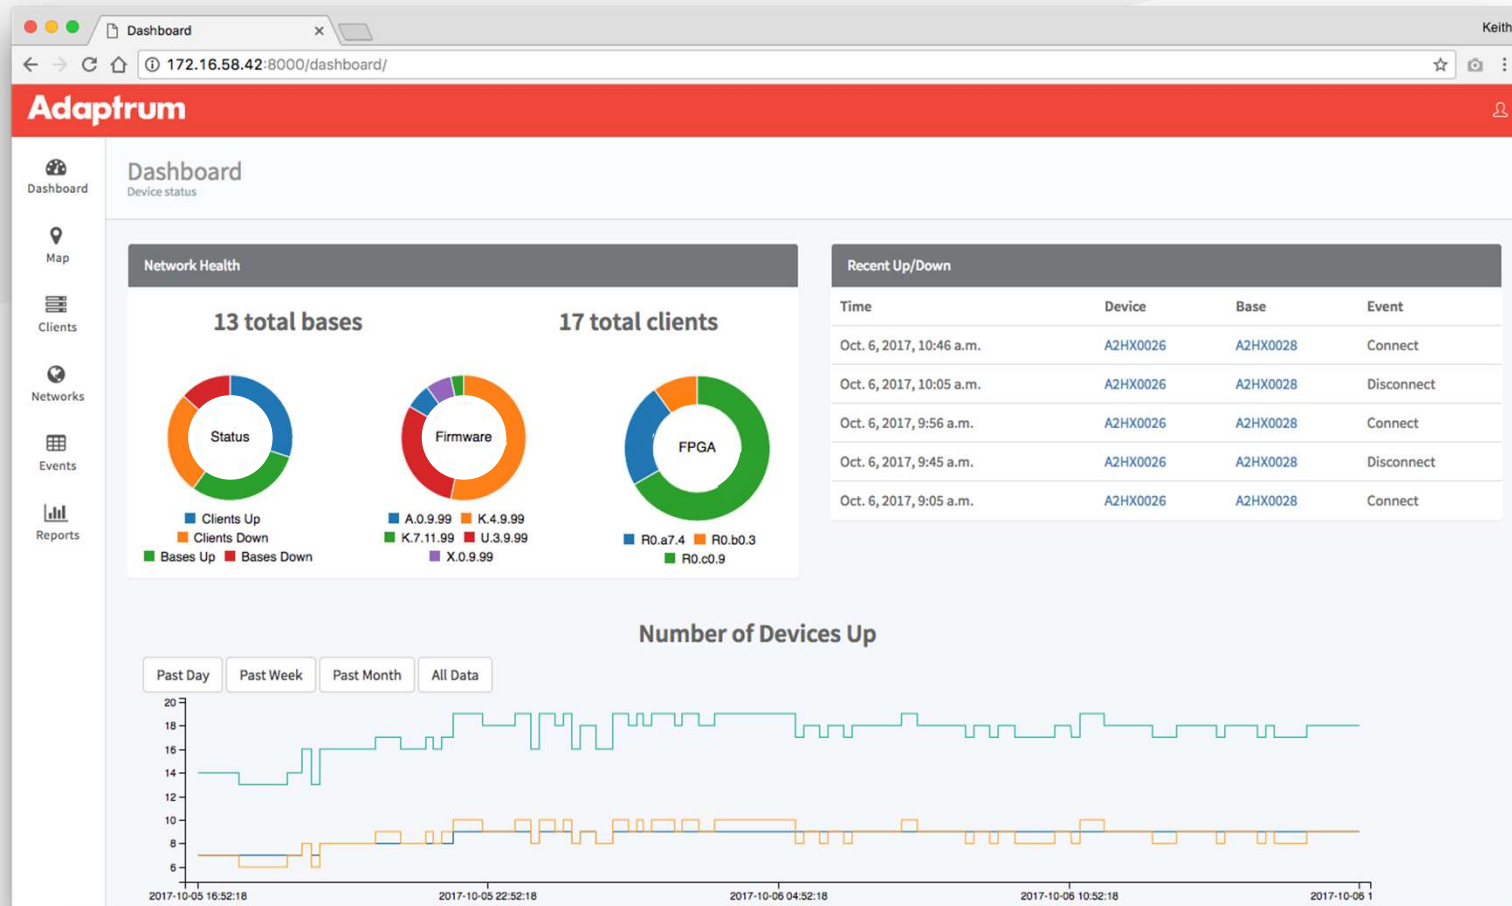

20 to 35 Mbps
per sector

ACRS2.0 CPE connects to an external Wifi router

Adaptrum Network Management System

Configure, Monitor and Manage Network wide TVWS Devices

Adaptrum

Adaptrum Device Manager

Browser based GUI running on the device

The image displays three overlapping screenshots of the Adaptrum Device Manager web interface. The top-left screenshot shows the main navigation menu and the 'Status' page. The top-right screenshot shows the 'Channels' page with a table of available channels and their noise levels. The bottom-center screenshot shows a 'Link Graph' with two data series: DL_AVAILABLE (green) and DL_USED (red).

Adaptrum

Device

Status

Serial Number	Firmware Version	Hardware Version	Link Up	Current Channels	DL/UL Usage
DANNY001	S.0.9.99	R0.c3.4	Transmitting	27	8.59% / 3.96%

Channels

All Available

Select	CH	Max Power (MOP / COP)	Noise Level
<input type="checkbox"/>	21		-90.6 dBm
<input type="checkbox"/>	22	35 / 9	-84.2 dBm
<input type="checkbox"/>	23	36 / 20	-90.5 dBm
<input type="checkbox"/>	24	36 / 30	-88.7 dBm
<input type="checkbox"/>	25	36 / 36	-89.3 dBm
<input type="checkbox"/>	26	36 / 36	-91.5 dBm

Link Graph

DL_AVAILABLE (Green line), DL_USED (Red line)

Y-axis: 0 to 15

Upload and Download

Graph	System Notes	Serial Number	MAC	PHY Mode
<input type="checkbox"/>		A2PKT002	00:18:30:8f:37:30	16QAM 5/6(S4Q)

Radio Network Channel Planning

- **Patented Agile Sensing technology**
 - Real-time spectrum sensing & analysis gives instant visibility of the radio spectrum
 - ACRS radios measure channel background noise and interference level in a matter of seconds
 - Scan the complete UHF TV band (470 MHz to 800 MHz)
 - Choose the best channel(s) for operation
- **Multiday and Overnight Spectrum Scan**
 - Optimize network channel planning across conditions that change over time

The image features a solid red background. A diagonal line runs from the top-left corner towards the bottom-right, dividing the space into two triangular sections. The section to the left of this line is a slightly darker shade of red, while the section to the right is a slightly lighter shade. The text 'Going forward' is positioned in the lighter section on the right side of the image.

Going forward

Adaptrum TVWS equipment

Generation 2

ACRS 2

Designed for rural

Generation 3

ACRS 2.1

Scaling for speed

Generation 4

TVWS ASIC

Next generation

- For ITU Region 1 Adaptrum supports 8Mhz channels, channel expansion to 10MHz, 470-694MHz. (Chipset supports 6,7,8 Mhz channel plans depending on ITU region)
- Range capability : Verified deployments LOS > 20km and NLOS/nLOS up to 10km (*terrain & clutter dependent)
- Power consumption 20W (ready for low power outdoor deployments)
- PAWS database compliant & implemented in multiple countries in North America, Europe, Africa and Latin America

- Single channel with channel expansion to 10Mhz (regulator dependent)
- Modulation QPSK to 64 QAM depending on range and clutter
- Network sync

- Channel expansion to 20MHz (regulator dependent) and channel aggregation
- Improvements in modulation, network sync, network management platform

- Chip based devices with improved economics
- Multi-standard (802.22 & 802.11af)
- Enabling Multi-band AP & Mobile systems
- Enhanced capabilities to support IoT

Adaptrum

Adaptrum Projects

Virginia, USA

Closing the homework gap in rural Virginia with largest US TV White Space project

On-track to connect 1000 student homes, at no cost to families

Network spans two counties in S. Virginia.

Provides connectivity from sites at fiber-connected schools

Maine, USA

Axiom

Closing the digital divide
in rural Maine

Remote rural communities
Heavy trees and foliage

Close to 100 radio deployed to date

1st commercial user to use
channel expansion to increase
capacity in installed network

Microsoft
Affordable
Access Grant
Recipient

Only US company

Aguadas, Colombia

Pilot project connecting
Rio Arriba school

15 miles
away from
Aguadas, Caldas

Pending regulations will
allow expansion into
countrywide projects

Arran, Scotland

BROADWAY PARTNERS

Deploying TVWS to provide internet service in remote/rural “not spot” areas of the UK

First
commercial
TVWS Network
in UK

Adaptrum ACRS2.0
1st Radio to receive
ETSI compliance
certification

Jamaica – First Caribbean Deployment
