

Introducing Ferraris Tolenoid C®

June 2019 (Updated January 3, 2020)

Ferraris Challenge

Ever since the commercialization of electricity, there have been an untapped byproduct in form of electromagnetic field generated by flowing currents in power lines. By harnessing the forgotten and unused electromagnetic energy through electromagnetic energy recycling, Ferraris has opened a new pathway for electric power generation and energy recycling technology for the mankind. Ferraris was founded in a strive to harness the power from a magnetic field produced by power lines and transform it into a reliable and countable power source.

Dr. KOO, who is the founder of Ferraris wishes the investors to set their focus and priority environmental social governance with key focus on providing clean energy produced by Ferraris' products through the magnetic energy over the corporate management of Ferraris. The prime directive of Ferraris is to provide clean energy with no environmental pollution around the world to improve and restore environment for the benefit of current and future generations to come.

We have named Ferraris Inc. in memory of Galileo Ferraris.

I. Introducing Ferraris Tolenoid C® Technology

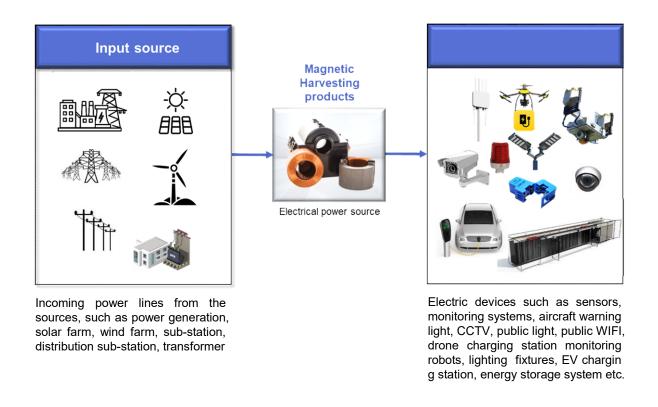

1. Ferraris Tolenoid C® Technology

A Ferraris technology which harnesses induced electrical energy from the magnetic energy variation produced from the power line regardless of the power line voltage. Ferraris Tolenoid C[®] is designed, developed and manufactured mainly for the electrical power generation. The world's first technology that only Ferraris has – Linear power scalability (https://youtu.be/Y3IR5djt5hg), input/output power Variation controllability (https://youtu.be/z3OLe21eFGU), Single digit mass production loss ratio.

Ferrons Power

■ The uses of Magnetic Harvesting products

Key Obstacles of Producing ready-made Magnetic Harvesting products

Key obstacles regarding the input source

- The current of power line is not constant, but varies in wide range, furthermore it cannot be controlled by harvesting device.
- •The amplitude of current of power line may be lower than the minimum one set by regulation in many cases.
- The product must be easy and simple to Install or de-installation without power off a power line. Furthermore there should be no safety hazard issue.
- Exiting magnetic core is made mainly for sensor application, not for the power application.

Magnetic Harvesting products

Key obstacles regarding the mass production

■The production process and quality control procedures such as winding, cutting, polishing, primary test, coiling, and final tests can be automated to minimize product loss and human dependency, which enable product to be mass producible.

Key obstacles regarding the output source

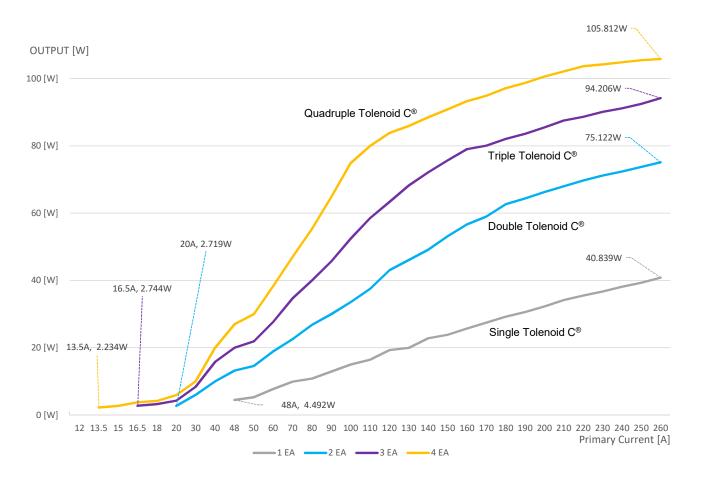

- Power source should be scalable for the variable output source.
- The power usage of the electric devices for system integration by the solution provider varies by case by case, which means there is no standard output requirement, but should be adaptable in the field.
- In most cases, power supply based on magnetic harvesting method is designed by custom method, not modular design method.

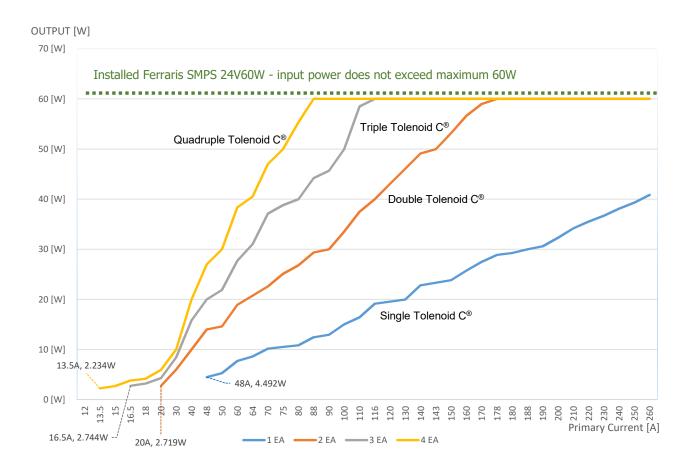

Ferraris Manufactures ready-made Magnetic Harvesting products

The Ferraris technology The Ferraris technology of input source Magnetic of output source Harvesting ■ Ferraris Tolenoid C® has unique Input ■ Ferraris Tolenoid C®, Linear power products magnetic flux control design for SMPS scalability and Ferraris Ferraris SMPS (Switching Mode (Switching mode power supply) design Power Supply). technology, Input controllability and Output load variation. ■ Ferraris Tolenoid C®, Linear power scalability and unique splittable magnetic core design. Splittable magnetic core design, proper heat handling case design and unique Ferraris Separator. ■ Ferraris has minimum 2~3 times higher power by magnetic core design Ferraris technology for mass and manufacturing process. production Cutting By utilizing innovative automated production process and quality control, Ferraris has reduced loss ratio to a single digit. Furthermore, Ferraris has now operated production system to mass produce the product.

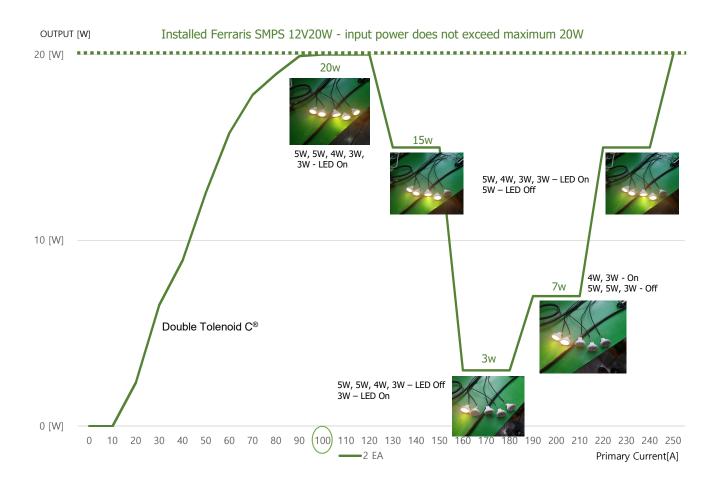

2. Ferraris Tolenoid C® Technology - Linear power scalability

3. Ferraris Tolenoid C® Technology - Input controllability

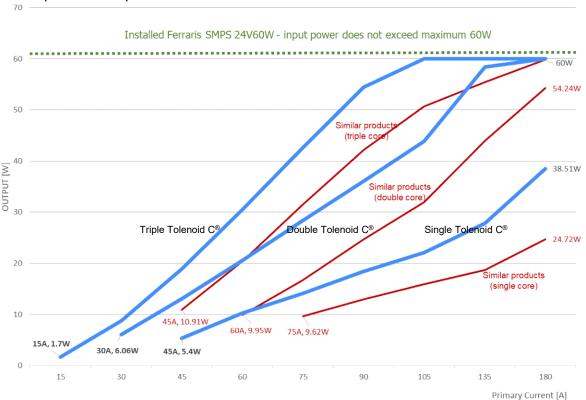

4. Ferraris Tolenoid C® Technology - Output Load variation / traceability

5. Ferraris Tolenoid C® Technology - Performance Evaluation

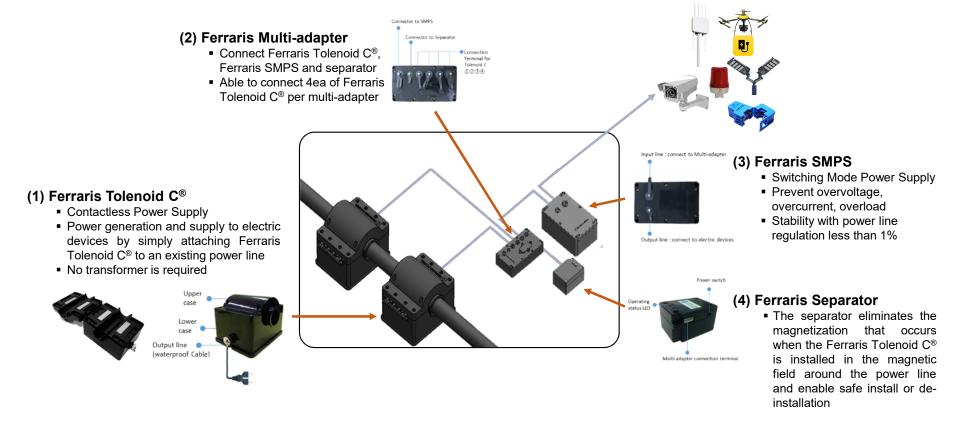

■ In the 15 ~ 60A primary current line, Ferraris Tolenoid C[®] produced higher output power (Watt) of 49.73% ~ 107.06% than other companies' core products.

II. Introducing Ferraris Tolenoid C®

1. Ferraris Tolenoid C® products

• For further information of the products, refer to chapter V. Spec sheets.

2. Four kind of Ferraris Tolenoid C®

• Ferraris Tolenoid C[®] can be installed wherever power lines are regardless of its voltage such as high-voltage distribution lines, underground lines.

		for Home IoT	for IoT / Sma	rt grid (underground/dis	tribution line)

III. Comparing Ferraris Tolenoid C® and its Technology

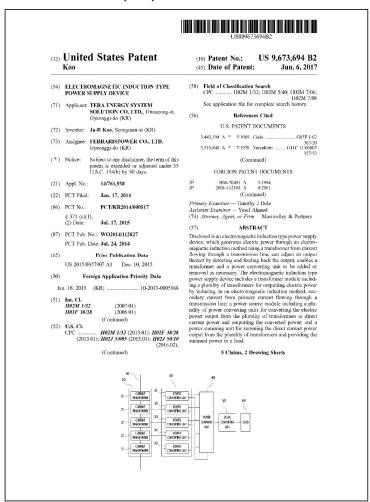

- 1. Ferraris Tolenoid C[®] is designed, developed and manufactured mainly for the Electrical Power Generation.
- 2. Linear power scalability Ferraris Tolenoid C[®] can produce upto desired output level by simply adding Tolenoid C[®] module step by step if incoming power line has more than enough power from the desired one.
- 3. Input controllability Ferraris SMPS can control the maximum wattage Tolenoid C[®] power generation through its logics system so that the Tolenoid C[®] produce input power does not exceed maximum desired wattage. (Maximum wattage can be set by the user)
- 4. 2 and 3 Full-motion video demo https://youtu.be/Y3IR5djt5hg
- 5. Output load variation/traceability Under load variation situations, Ferraris SMPS will produce stable output power the user demands. Any further surplus output power caused by load variation control is managed by Ferraris SMPS's control logics system of the production system. Full-motion video demo https://youtu.be/z3OLe21eFGU
- 6. Even under the simultaneous variation in primary line and load, Ferraris SMPS supplies stable output power.
- 7. Ferraris Tolenoid C[®] is easy and simple to Install or uninstall without switching off a power line and thus minimizes any safety hazard issue.
- 8. Innovative method of magnetic energy harvesting and large-scale system over kilowatt to megawatt level is easily implementable. (Ferraris ERR System)
- 9. Ferraris is the first to have adopted an operational production system to mass produce its products. By utilizing innovative automated production process and quality control, Ferraris has reduced **loss ratio to a single digit**.

Abstract—In this paper, the toroidal core design with improve power density for magnetic energy harvester is proposed. Around the power line, beakage magnetic field is a promising energy source. However, the problem of magnetic saturation can cause power performance degradation of the harvester. To improve power density of nagnetic energy harvester, we controlled the inner radius of trootdel core by considering magnetic saturation effect. The proposed idea is validated by theoretical and measurement results.

I. INTRODUCTION

Recently, the energy harvesting technology is researched extensively with a range of industry areas. Beyond the small amount of energy level in the microwatts, magnetic energy harvesting technology now focus on high power at the level of harvesting technology now focus on high power at the level of kilowatts. Around power system, the AC leakage magnetic field is promising energy source for high power energy harvesting. However, magnetic field is strong enough to make the magnetic core sarcated near power line [1]. The magnetic saturation effect should be considered in magnetic energy harvester design. In this paper, the high power magnetic energy harvesting from power line is discussed. We designed toroidal core by considering magnetic saturation effect. It is possible to achieve means at level of kilowater super executive many law energy harvesting.

energy at level of kilowatts using magnetic energy harvesters connected. The proposed system can be applied to power supply where high power energy is required without electrical installation works

II. MAGNETIC ENERGY HARVESTING SYSTEM

The structures of magnetic energy harvesting system with connection of harvesters around power line is shown in Fig. 1. The magnetic energy harvester consists of toroical core and coil winding. When an alternating current flows the power line, the time-varying magnetic field induces voltage at the coil terminal. The induced voltage is important value for output power and is proportional to magnetic permeability [2], which is not only influenced by magnetic field but also toroidal core dimension. Magnetic energy harvester (Toroidal core + Coil winding)

Fig. 1 High power energy harvesting system with connection of magnetic energy harvesters.

As a results, the inner radius of toroidal core can be determined by considering nonlinearity of magnetic material and saturation effect as shown in Fig. 2(a).

III. EXPERIMENTAL VERIFICATION AND RESULTS

To verify the proposed idea, we used a 3 phase distribution panel as current supply. The output ports are connected with resistive load bank to adjust power line current. Fig. 2(a) shows the induced voltage with different mner radius of toroidal core.

Fig. 2 (a) The induced voltage in coil terminal with different inner radius of the toroidal core. (b) the output power versus the number of

Based on theoretical results, we are optimally designed for the to determine the states, we deplinately experted to the results, the magnetic energy harvesters are connected in series as shown in Fig. 2(b). The number of magnetic harvesters is proportional to the output power. We tested with fifteen magnetic energy harvesters at 210 ampter and harvested 1.14 kW around power line.

IV CONCLUSION

In this paper, we propose a new approach of the toroidal core design for magnetic energy harvester near power line. To schieve high output power, we analyze the inner radius of toroidal core by considering magnetic saturation effect and connect harvesters in series for high power. The theoretical and measurement results support the proposed idea as well.

V. Spec sheets of Ferraris Tolenoid C® products

■ Tolenoid C[®] (Contactless power supply)

Line thickness Under 1.30 inches

Line thickness Under 2.48 inches

Split form factor

Tolenoid C® (1.30 / 2.48 inches)

- Tolenoid C[®] convert magnetic energy around power line into electric power form for various electric devices.
- Tolenoid C® can be installed into power lines regardless of its voltage such as high voltage
 distribution lines, underground lines as a form factor of splitable one which make them
 possible easy install Tolenoid C®.
- Tolenoid C[®] can save electric device installation cost and time compare to conventional way which requires transformer and complex wiring process for 110 or 220Vac power line.
- Maximize efficiency of induction electricity generation by effective Core design and manufacturing process from Ferraris technology.
- Secure electric power energy generation from 10 ~ 650 Ampere power line.
- Water proof case design. (IP65 ~ IP68)
- Electric power generation capacity depends on the current of the primary power line and this
 can be controlled Ferraris designed SMPS type.

Specifications	Under 1.30 "	Under 2.48 "
Primary power line current (A)	10 ~	650 A
Primary power line voltage (V)	~ 3	0 kV
Primary power line wire thickness (inches)	~ 1.30	~ 2.48
Output current type	AC o	utput
Working temperature (°F)	- 40	~ 185
Waterproof (IP)	IP 65 ~ 68 (KS	C IEC 60529)
Size (W*D*H inches)	5.12 * 3.94* 4.33	6.69 * 3.94 * 5.90
Weight (lb)	4.70	7.05
Case material	PC 0	GF 20

SMPS (Switching mode power supply)

Output : connector to system

Input : connector to multi-adapter

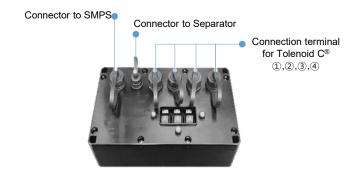

SMPS (12V 20W / 60W)

- SMPS block is a semiconductor based circuit board which convert AC input from Tolenoid C[®] into to a DC output for the user requirement or multi-adapter for multiple Tolenoid C[®].
- Ferraris SMPS block is basically composed of two component. Incoming AC signal is converting into DC signal by regulator sub-block and this DC signal is smooth by advanced SMPS block for stable DC output.
- Ferraris SMPS block has the following features.
 - 1) Preventing overvoltage, overcurrent, overload feature
 - 2) Line regulation less than 1%
 - 3) Control maximum output controllability
 - 4) Incoming input controllability
- Available IP65 to IP68 case design available.
- Scalable power output capacity is possible depending on customer need.

Specifications	12V/20W	24V/60W
Input	Output of T	olenoid C®
Output	DC 12V/20W	DC 24V/60W
Working temperature (°F)	- 40 -	~ 185
Waterproof (IP)	IP 65 ~ 68 (KS	C IEC 60529)
Size (W*D*H inches)	3.54 * 5.	51 * 2.36
Weight (lb)	1.	87
Case material	PC G	SF 20

Multi-adapter

Multi-adapter

- Multi-adapter is a sub-block tool that allows multiple Tolenoid C[®] to be connected and operated.
- This one make system allow output power scalability, such as increasing power from 10 to 40Watt and also reducing the required minimum current of power line for Tolenoid C[®] power generation.
- The multi-adapter has four Tolenoid C[®] connectors and one for each SMPS and Separator.
- For the future usage, Tolenoid C[®] connectors can be added more, such as up to eight.
- Deliver generated power from these multiple Tolenoid C® to SMPS block.
- Separator is for safe installing and disassembling Tolenoid C[®] to SMPS block. This is mandatory one for safety.
- You can switch on and off each Tolenoid C[®] by pressing switch even if you connect them up to multiple Tolenoid C[®].

Tolenoid C [®]	Up to 4ea
Separator	For installation/de-installation
SMPS	SMPS connections based on desired voltage and output
Working temperature (°F)	- 40 ~ 185
Waterproof (IP)	IP 65 ~ 68 (KS C IEC 60529)
Size (W*D*H inches)	7.09 * 3.94 * 1.77
Weight (lb)	2.09
Case material	PC GF 20

Separator

Separator

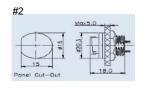

- The Separator is tool for safe installation or de-installation of Tolenoid C[®] at active power line without shutting down power line.
- The Separator make it possible of demagnetization of Tolenoid C[®] occurred when the Tolenoid C[®] is installed in the magnetic field around the active power line.
- Install or de-installation using physical force or other equipment without the Separator causes a safety problems such as finger jammed in between and there is a risk of injury by cutting surface of the core.
- With Separator on, you can install or de-install Tolenoid C[®] at active power line without physical force or other big tools.
- Be sure to sue the designated Separator for Tolenoid C[®] check product serial numbers.

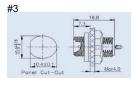

Specifications	
Working temperature (°F)	- 40 ~ 185
Waterproof (IP)	IP 40 (KS C IEC 60529)
Size (W*D*H inches)	1.93 * 2.60 * 1.50
Weight (lb)	0.29
Case material	Plastic

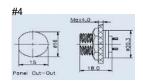

■ Cable and Connector - Obtain UL & CUL Certification, Waterproof test pass - IP 68

Cable

Internal wiring of electrical electronic equipment

Cable Connector

- #1 Connector connected to cable
- male & female pin (screw type, solder)

Output Connector

- #2 Tolenoid C[®], Multi-adapter output connector, panel mount & female pin (lock bayonet type, solder)
- #3 SMPS output Connector, rear panel mount & male (screw type, solder)

Input Connector

 #4 Multi-Adapter, SMPS input connector, panel mount & male pin (screw type, solder)

Interfac	e Cables
Rated	(UL) 221°F 300V
Insulation vessel	UL 1007, UL 1061 Type
Flammability	VW-1, FT-1 Satisfied
Application specification	UL Subject 758, 1581 CSA C22.2 No. 210

Cable C	Connector
Panel thickness (inches)	0.138 ~ 0.268 inches
Environmental protection	IP 67 or 68 (IEC 60529)
Mechanical life	500 Mating cycles
Operating temperature (°F)	- 49 ~ 221
Voltage rating	110 V
Rated current (104 °F)	5 A

Output	Connector
Panel thickness (inches)	Max 0.196 inches
Environmental protection	IP 67 or 68 (IEC 60529)
Mechanical life	500 Mating cycles
Operating temperature (°F)	- 49 ~ 221
Voltage rating	30 ~ 300 V
Rated current (104 °F)	2 ~ 10 A

Input Connector	
Panel thickness (inches)	Max 0.157 inches
Environmental protection	IP 67 or 68 (IEC 60529)
Mechanical life	500 Mating cycles
Operating temperature (°F)	221
Voltage rating	30 ~ 300 V
Rated current (104 °F)	2 ~ 10 A

Electric energy is Electromagnetic energy,

Our approach to a new paradigm of efficient electric power generation and recycling!
