

AFTERCARE TO BROWS PERMANENT MAKEUP

AFTERCARE INSTRUCTION (WITHIN THE FIRST 2 WEEKS)

In the next 2 weeks after your first procedure get done, client is required to follow the bellow aftercare instruction strictly:

Do not contact with water at least 48 hours right after procedure (skip washing your face/your hair). The thick crust will appear if water contact to the treated areas directly and all the pigment will fade.

- 1st Day: Keep your brows dry. Clean your brows with facial tissue damp with distilled water (blot, not wipe) every 30 mins to 1 hours. This will help remove any excess lymph, blood and pigment that may appear after the procedure.
- 2nd Day: Clean your brows with facial tissue damp with distilled water 2-4 times per days (blot, not wipe). Try to keep you brows dry at least the first 2 days
- Day 3rd-10th: Put Aftercare oilment 2 to 4 times a day until your brows finish scab exfoliation. Make sure your eyebrows are not greasy, but just moistened a little so you won't see any residue of the oil. If skin is oily or sweaty, you can put Aftercare ointment less (1-2 times a day) and make sure you clean the skin when necessary (Witch Hazel if necessary).
- Before apply the new Aftercare ointment , clean your brows with tissue and distilled water. DO NOT use any cleansing products containing acids (glycolic, lactic, or AHA). Only use a pin-point drop of aftercare ointment on your clean fingertip and spread it across the area. Do not over-apply the product. The ointment should be barely noticeable on the skin.
- **Important reminders**

In the first 2 weeks, keep your eyebrows dry and clean; do not get your brows directly wet; water, ocean, pool, sweating or any other liquids, avoid swimming pools, sun bathing, tanning beds (no sun or tanning for 30 days), sauna, beauty treatments and intense training accompanied by sweating (sport activities), contact with dirt and dust (Even a small drop of water, liquid which seems unimportant may expand the wound / possible infections / excessive scabbing may appear, and you may ruin the results

Do not use any other ointments, cream on eyebrows except the ones provided our recommended to you to prevent possible infections or allergic reactions.

Your brows may not exfoliate evenly. Depending on the skin structure after the first treatment small scabs with a loss of drawn hairs may occur and color intensity may change. During the exfoliation process your color may look weak, orangey, pinkish, or grey and this will not be your final result. It takes a full 6 weeks or more for your true color to surface. Please be patient and wait until you are fully healed before you critique your eyebrows. Any refinements can be addressed at a follow up visit.

No direct sun exposure. No Retinols, AHA's, exfoliating treatments, chemical peels, microdermabrasion, botox and any other strong treatments for 6-8 weeks after your procedure.

Smoking WILL cause the pigment to fade prematurely and anesthetics will not last as long.

DO NOT USE growth enhancement products such as Latisse, Revitabrow, Grande lash, one month prior and after treatment has fully healed as it may shift your color.

No sweating (of any kind), gym, yoga, swimming for 2 weeks. If you work out regularly results may heal more to a powdered look due to the oils the body produces when it gets heated and sweaty.

DO NOT FORCE THE REMOVAL BY PICKING, SCRATCHING OR WASHING!!! PIGMENT MAY BE REMOVED ALONG WITH THE CRUST!!!

Please read and understand the risks to this procedure and strictly follow the aftercare instruction after the treatment.

If you do not follow the aftercare, you may ruin the results and the technician and Luxury Beauty Studio has the right to release you from any future services.

Do not be alarmed by fading after the first application. The final color cannot be judged until at least 3 weeks after the touchup applications are completed. This is the reason follow-ups are required.

Regular makeup can be worn immediately after your procedure, just not on the treated area until healed. No makeup, lotions, pencil....etc. for 10 days....Put very thin layer of Aftercare oilment oil and reapply a thin couple time a day around After the 10 days, use a gentle cleanser to clean them. Avoid scrubbing them for 1 month.

The eyebrows WILL appear bolder immediately after the procedure. This is common in all Permanent Makeup applications...it will begin to soften up after a few days. Hair strokes appear crisp and bold at first, but will soften up as the tissue heals.

It is very common to have areas fade more so than others. This is part of the healing process and will be treated at the recommended touch up appointment. Previously done eyebrows may take 1-3 treatments to achieve the desired result. Scar tissue in the brow area of eyebrows done multiple times WILL require additional procedures and fees will apply.

Clients with darker skin (Indian, African American, Filipino, etc.), Please know that the Hair Strokes WILL NOT appear as defined or as dark as lighter skin types due to the skin color already being naturally darker.

THANK YOU VERY MUCH FOR CHOOSING OUR SERVICE AND WILL SEE YOU AGAIN SOON AT YOUR TOUCH UP APPOINTMENT.
