

Water... Water... Everywhere?

Where does it come from?

We can dig wells and get it out of the ground. It runs free in creeks, rivers and lakes. Oceans of water cover 71% of earth's surface!¹ Some very dry communities even desalinate ocean water!

Water makes up 60% of the human body, 73% of the Brain and Heart
Our lungs are 83% Water

What Does Water do for You?

According to the US Geological Survey (USGS)² Water is of major importance to all living things; in some organisms, up to **90%** of their body weight comes from water. According to H.H. Mitchell, Journal of Biological Chemistry 158, the brain and heart are composed of 73% water, and the lungs are about 83% water. The skin contains 64% water, muscles and kidneys are 79%, and even the bones are watery: 31%.³

— Water —
Pure & Clean

could be the single most important substance for life!

We take water for granted, that it will always be there when we turn on the faucets to water our lawns and gardens, do the laundry, take showers, and flush our toilets. We use it for cooking; and when we travel, we go to the store and buy it in bottles.

Some brands say pure spring water, others say purified by reverse osmosis, other brands add minerals for taste. We consume it as ice, soft drinks, juice, and beverages. It is in the food we eat. Even we are 60% water. We can't do without it.

The purity of our water impacts every aspect of our lives!

How would you rate the purity of your water?

Do you trust the water that comes out your faucets at home? ...the water you use to cook and drink? What about water you buy in a bottle?

Water is purified in nature when it evaporates and rises into the sky. Water vapor leaves the heavier impurities on the ground, then returns to the earth as rain – as pure as the sky.

You can make your own pure rain water in a bottle.

This is called distillation.

You could buy distilled water from the store. People use it for their steam irons and other things that call for distilled water. It costs more than regular bottled water; but you still don't really know just how pure the bottle of water you got at the store really is. Do you?

Did you know your body prefers distilled water, too?

If you could make distilled water in your own home for just a few pennies a gallon, would you be interested?

Clean distilled water in your home can change your world.

How can I make my own distilled water at home?

Pure and Simple
Distill it.

Your juices taste better!

Your food will too!

Ice made with distilled water freezes more efficiently and doesn't make your drinks taste funny. Your mashed potatoes, pastas and cereals cook better and taste delicious!

That is not all...

You will begin to notice a difference in how you feel!

As you get accustomed to preparing all of your meals and beverages with water you distill in your own home, everything tastes better. Over time, our customers have also noticed a difference in how they feel.
