

NMF CMA Course Informational

Program Rigor Disclosure

At Nurse Mom and Family, LLC, we are committed to continuously improving the quality of our training programs to better prepare healthcare professionals for today's workforce.

Please be advised that our Certified Medication course has undergone several updates due to changes in state regulations. This course will reflect an increased level of academic rigor, clinical practice, and assessment standards. This course is designed to strengthen student readiness, align with industry expectations, and support successful certification and employment outcomes.

Thank you for your understanding and continued support as we raise the bar for excellence in healthcare education.

National Certification Information

- **National Certification:** This course will not serve as a prerequisite for national exams for medication aide certification.
- Once completed, students will be eligible to complete the medication skills checklist with an instructor at an assisted living, skilled nursing home, or penal institution in the state of Georgia.
- Students who successfully obtain CMA certification can apply for work in an assisted living, skilled nursing home, or penal institution in the State of Georgia. A CMA is unable to administer medications in any other clinical setting. Although hourly wages are not a guarantee, entry-level pay for a CMA in the Metro Atlanta area is between \$14- \$22 per hour.

Course Eligibility

- **Age Requirement:** Applicants must be at least 18 years old.
- **Educational Background:** A high school diploma, GED, or equivalent.
- **Language Proficiency:** Ability to read and speak English.
- **Physical Capability:** Students should be physically able to perform any job-relevant duties, which may include standing for extended periods, walking, bending, and lifting.

Course Prerequisite –

Students are required to hold an active Georgia CNA certification and must complete the mandatory orientation call with the instructor prior to participating in the course.

Clinical Rotation Prerequisites

- **Clinical Requirements:** Keep in mind, students will have to provide the following recent documentation before they can attend an externship or clinical rotation for their course.
 - A. A 10-panel drug screen (if necessary)
 - B. A criminal background check
 - C. A current tuberculosis (TB) screening
 - D. Malpractice Insurance coverage

CMA Course Description

The Medication Aide Technician course is a comprehensive training program designed to prepare students for safe and effective medication administration in healthcare settings. The improved Medication Aide course consists of four integrated components:

- a structured course manual content session that covers foundational healthcare knowledge, medication administration principles, and proper documentation practices
- a lab simulation session focused on hands-on skill development, guided review, tutoring support, and a pre-clinical readiness examination;
- a supervised clinical rotation session that allows students to apply learned skills in a partnering facility using a standardized medication skills checklist;
- and a state certification exam session in which students complete the required online proctored examination. Upon successful completion of all components and achieving a passing score on the state exam, students will receive certification.

Tuition & Payment Details

Medication Aide

- **\$500 - Total Costs.**

CMA Payment Deadline - Payment for the CMA Course is due no later than 24 hours from the start date of the course.

Payment Methods

Refund/Withdraw Request Form - <https://forms.gle/qXPYXFPWsG1ZFJHx6>

To properly request a refund, a student must:

1. Submit a written request for withdrawal/refund (Form in Office or Email) to Daphne Adams, Nurse Mom and Family CEO, email ceo@nursemomandfamily.com.
2. Return any institution-owned equipment/materials (if applicable)

Course Benefits

Our Medication Aide Technician Course equips students with the knowledge, skills, and confidence necessary to safely administer medications in healthcare settings. Through structured instruction, hands-on lab simulations, and supervised clinical experience, students gain a strong foundation in medication administration, documentation, and patient safety. The program emphasizes adherence to state regulations, professional standards, and best practices in medication management.

Key Benefits Include:

- Comprehensive instruction in medication administration principles, including dosage calculations, medication forms, PRN and extended-release medications, allergy awareness, and the Six Rights of Medication Administration
- Hands-on lab simulation training focused on accurate medication preparation, administration techniques, and Medication Administration Record (MAR) documentation
- Supervised clinical rotation experience within a partnering healthcare facility using a standardized medication skills checklist
- Preparation for the state-administered Medication Aide certification exam and entry-level employment opportunities
- Strong emphasis on professionalism, patient safety, error prevention, and effective communication in healthcare environments
