Run The Numbers
Reimbursement Potential for Screening

Template:
(Contact us and we can calculate this for you!)

\[
\frac{\text{# of providers}}{\times} \frac{\text{# of patients seen by provider in one week}}{\times} \frac{52}{\text{weeks in one year}} \frac{4}{\text{screens per year}} \frac{\$2-\$6}{\text{insurance reimbursement}} = \text{Reimbursement potential per year}
\]

Example:

According to national statistics,
50% of all providers see 50-99 patients per week. 20% of providers see 100-125 patients per week.

We think it’s more.

If 100% of the 6 providers see 99 patients per week, here is the breakdown:

\[
\frac{6}{\times} \frac{99}{\text{# of patients seen by provider in one week}} \frac{52}{\text{weeks in one year}} \frac{4}{\text{screens per year}} \frac{\$6}{\text{insurance reimbursement}} = \$741,312
\]

Potentially, one clinic with 6 providers could be reimbursed $741,312 in one year.
