

VIRTUAL CISO SERVICES

The Challenges of Do-It-Yourself Security

In addition to high Information Security payroll costs, other challenges of managing your security in-house include:

- Highly specialized training and expertise required
- Shortage of information security professionals
- Specific requirements in healthcare industry
- Ongoing release of sophisticated new security tools, technologies and protocols
- Evolution of new malware and other threats.

Benefits of Virtual Security Executive

Using the services of a virtual or part-time Chief Information Security Officer (vCISO) is an ideal way to achieve and maintain solid security – without paying for a full-time security executive. Other benefits include:

- Ready access to security expertise
- Hardened IT security for business and information assets (personnel/payroll and financial data, intellectual property, patient data, customer data and more)
- Stronger security posture
- Improved compliance
- Assured executive-level oversight
- Avoidance of unnecessary costs

Our Virtual CISO Services:

- Provide leadership, strategy and guidance in managing an organization's security risk
- Develop IT security roadmap and budget in context of industry-applicable compliance requirements and best practices
- Develop IT security risk management program, including policy, procedures and checklists
- Update IT security, incident response, and third-party management policy and procedures as needed
- Develop and assist in implementing Cyber / IT Security Control framework
- Provide checks and balances with in-house security staff
- Guide remediation of security gaps and incidents
- Serve as security advisor to business ownership and management
