

# WORKPLACE OVERHEATING

## WANT TO SAVE ENERGY, MONEY AND CARBON?

Poorly insulated workplaces are too cold in the winter and too hot in the summer. Even insulated buildings have a weakness - glazing!

Expensive to replace, older glazing leaks heat during winter and gains heat during summer. The result is an uncomfortable climate to live and work in, risking health and productivity.

Our health and wealth needn't suffer. For over two decades, a safe, durable, simple-to-apply, and affordable solution has existed.

Curious? Simply turn over to discover more!
