

BUILDINGS

AN UNCOMFORTABLE TRUTH

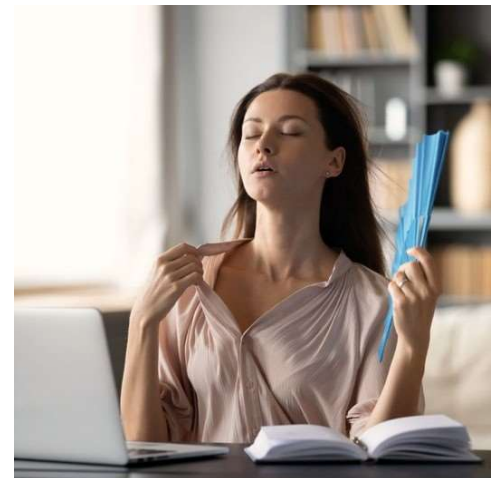

Uninsulated homes and offices are too cold in the winter and too hot in the summer. Even insulated buildings have a weakness, glazing.

Expensive to replace, older glazing leaks heat during winter and gains heat during summer. The result is an uncomfortable climate to live and work in, risking health and productivity.

Our health and wealth needn't suffer. For over two decades a safe, durable, simple to apply *and* affordable solution has existed.

INDUSTRY & RESEARCH PARTNERS

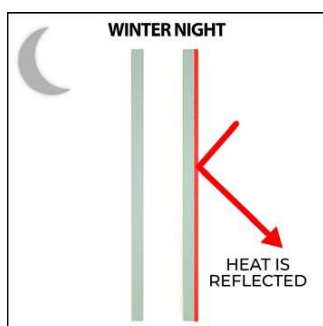

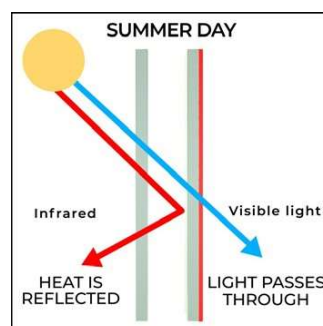

Retrofit® Window Coating

An affordable, proven alternative to replacing expensive double-glazing at scale.

- Simple coating onto existing glass.
- Contributes to EPC point uplift via RdSAP.
- Minimal installation disruption.
- Low-E equivalent thermal performance.
- Up to 50% reduction of condensation, inhibiting mould growth.
- Significant reduction in overheating (Blocks 99% UV & 85% IR light).
- Multiple GQA accredited training sites.
- 10-year manufacturer warranty.*
- Over two decades of energy saving projects across 37 countries.
- Best Cost / Benefit ratio of any energy improvement measure.

WINTER
Energy is reflected back into room, keeping interiors warmer.

SUMMER
Reduces heat build up in rooms without restricting daylight access.

*Approved contractor installations only
