Company Profile

Bio-Medical.Calabria S.r.l.s has a main objectives; the quality and market research of technologically innovative products aimed at the satisfaction of its customers, mainly composed of Hospitals, Nursing Homes and regional dealers. Bio- Medical.Calabria S.r.l.s i s regularly registered at the MEPA. With reference to the Covid-19 emergency, it has implemented its offering, acquiring innovative technologies for either services or sanitization supplies Depending on what needs to be sanitized, Bio-Medical.Calabria S.r.l.s operates using the most advanced medical and surgical devices and the most performing equipment, in ways and quantities that do not harm in any way the health of those who will stay in the treated spaces. Bio-Medical.Calabria S.r.l.s distributes throughout the Italian territory access control and sanitation tunnels and intelligent infrared cameras. Bio-Medical Calabria has recently completed its offer of equipment and services, as well as consumables and PPE, consolidating a partnership with established companies operating in Italy in the manufacturing and distribution of advanced health.

MEDICAL SYSTEM GROUP s.r.l.

Medical System Group S.r.l. is a dynamic company founded in 2004 with proven experience in the sectors of sanitation, disinfection, and decontamination of healthcare environments. It also offers:

Hyperbaric Medicine Centers

- Construction of specialistic units with the "turn-key" formula;
- The in-depth knowledge of therapy and the needs of medical staffs allows us to propose customized solutions that meet the needs of the territory and safety requirements of operators and patients;
- We can supply chambers with omega or parallelepiped shaped sections, according to the requests and expectations of customers;
- Our offer is completed by the design of the hyperbaric centers, including furnishings and specific medical devices;
- The hyperbaric medicine centers we propose comply with regional, national and European guidelines. Medicinal Gas Plant

Medicinal Gas Plant

For Compressed and Vacuum Medicinal Gas System, a set of medical devices suitable for the distribution of medical gases within hospitals, both public and private. The system includes:

- a power station;
- a distribution network, with terminal units located in the various departments where the gases both medical or vacuum are required;
- a monitoring and alarm system

Safe Dental Project

All operators in the sector are obligated to use PPE (Personal Protective Equipment) to protect against biological agents. Art. 75 of the Consolidated Law on Occupational Safety requires the adoption of safety procedures which require the use of specific PPE.

Since 1997 STM has been a current company on the Italian market. Over the years it has continued to evolve and implement its range of products and services. Constant development, combined with flexibility and the search for new solutions, has allowed us to enter the foreign market, gaining consensus and appreciation.

The main activities carried out by STM are:

- *Design, production and marketing of medical devices for the distribution of medical gas systems and evacuation of anesthetic gases.*
- *Design and construction of plants for the distribution of medical gases and the evacuation of anesthetic gases.*
- *Maintenance and assistance services on plants for the distribution of medical gases and evacuation of anesthetic gases.*

STRUCTURES AND PLANTS

Construction of prefabricated operating rooms. The system is based on a self-supporting steel structure, directly floor-anchored, with height-adjustable sealing fastening, which makes the structure free from imperfections of planarity and squaring of the underlying masonry. Coatings by means of resin, Corian®, porcelain steel panels or bio-compatible plastic materials can be fixed on the structure thus created, according to the various needs and project specifications.

Realization of sterilization units complete with new generation systems.

FURNISHINGS

Hospital furniture; multi-section motorized beds line, complete with wardrobes, bedside tables, and accessories; furniture for clinics; design and layout according to project specifications; special stainless steel furniture for operating rooms; sterilization centers for clinics and chemical/biological laboratories.

ELECTROMEDICAL EQUIPMENT

Diagnostic imaging systems, both new and used (regenerated with warranty): CT; PET, SPECT; MRI, MAMMOGRAPHERS, DIGITAL X-RAY SYSTEMS, ANGIOGRAPHS, etc.).
Ultrasound systems, both new and used (regenerated), complete with accessories and software.

Printing and image archiving systems for PACK and RIS.

Advanced equipment for chemical/biological laboratories and related reagent kits.

Urological lithotripsy and uro-radiology systems. Rehabilitation and physiotherapy equipment. Latest generation robotic systems for rehabilitation.

ORTHOPEDECS - HEALTHCARE - REHABILITATION - HOSPITAL FURNITURE

"The pleasure of helping others is the engine of our business."

Medical Orthopedics MEDISAN was created to offer the ideal orthopedic solution to improve the quality of one's life. Structured on two orthopedic shops specialized in the sale of equipment and devices of the best brands. MEDISAN has a staff of highly specialized orthopedic technicians, able to assist customers in the choice of aids for the disabled and for rehabilitation, electro-medical devices, postural rehabilitation aids, orthopedic equipment such as lumbar corsets, knee braces, hand and shoulder braces, sanitary items for the bedroom, for the shower and the bathroom but also prepared and made-to-measure footwear, preventive and curative elastic stockings. The technicians are also available to customers for the baropodometric, podographic and podoscopic evaluation and to advise on the choice of the best insole. The Orthopedic Laboratory is equipped with the most modern equipment capable of creating orthopedic aids and braces for the spine, even for the most complex orthopedic pathologies. It has an agreement with ASP-INAIL and it is able to operate throughout the regional territory. As well as carriers of furnishings for medical offices, nursing homes and hospitals.

MEDICAL FARM SRL

BENESSERE E SICUREZZA NEI LUOGHI DI LAVORO

MEDICAL FARM (MF) was founded in 1999 and immediately, in addition to specific expertise in the chemical products sector, electromedical and health equipment, scientific and diagnostics equipment, has directed its intervention area particularly towards sanitation and cleaning of air conditioning systems and indoor environments. Thus, making use of the knowledge and skills acquired and using cutting-edge technologies and methodologies, MF has become a company strongly dedicated to environmental remediation. Since we firmly believe that an integrated system of quality, health and safety management in the workplace undoubtedly provides the necessary infrastructure to monitor and improve performance in any chosen area, we have been specialized in chemical, microbiological and physical remediation of air treatment and conditioning systems, of all types and sizes, in the microbiological and chemical treatment of technological process waters and water intended for human consumption and in the microbiological and chemical monitoring of workplaces. We use the most innovative techniques. We have designed systems, experimented new methodologies, developed chemical, microbiological and mechanical procedures and techniques that, in addition to allowing us to face and solve the most delicate and difficult situations encountered in indoor environments and ensure safety from a hygienic point of view, significantly improve the heat exchange with a relevant energy saving. The company is ISO 9001, ISO 14001 certified.

Team

Our team is a reality in continuous expansion, thanks to the valid and qualified collaborators who are part of our structure.

Each employee of the MF has a valid and documented experience in technical and scientific discipline.

This allows us to offer our customers assistance in the field of hygiene and safety in the workplace, technical services, engineering services, environmental protection and periodical checks required by current regulations.

Services

ENVIRONMENTAL REMEDIATION

MF, strengthened by its skills, developed chemical, microbiological and mechanical procedures and techniques which are safe from a hygienic-sanitary point of view and improve significantly heat exchange with considerable energy savings, thanks to the cleaning of the aeraulic system. During the cleaning operations of the aeraulic systems, the operating staff restores the quality of the air and neighboring environments. We are specialized: in the cleaning and sanitization of aeraulic systems and all its components; in instrumental surveys for the determination of microclimatic conditions in the workplace and microbiological sampling; in the verification and environmental requalification. The experience gained in the field makes MF the company to remediate water networks and, in general, all environments contaminated by biological agents through advanced remediation techniques for distribution networks as well as controlled atmosphere environments. In its remediation activities, MF always uses the best and certified products, inert for humans but highly effective in the remediation of bacterial colonies.

INSTRUMENTAL SURVEYS

The technical staff of MF is specialized in carrying out characterizations of the workplace. With the help of suitable equipment, we are able to perform the following services:

1) Physical checks:

- microclimatic parameters AT (air temperature), GT (globometric temperature), AV (air velocity), Rh (relative humidity);
- thermal comfort indices: PMV (expected average grade) and PPD (predictable percentage of dissatisfied);
- number of air changes;
- lighting levels;
- noise exposure

2) Microbiological checks:

- degree of microbiological contamination of the operating field during the operation (single plate sampler - SAS- Surface Air System).

SYSTEM CHECKS

Finally, MF is also able to provide support for the verification and certification of systems: electrical; methane gas; air treatment and conditioning.
