

## Shelter in Place Locking Solutions

***Empower Workplaces***

***Secure Occupants At The Press Of A Button***

*When every second counts, Securitech's red button locking solutions empower anyone in the room to enact a code-compliant lockdown system*

# Security At The Press Of A **Button**

**FAST**

There's nothing quicker and easier than pressing a **red** button to lockdown a room at the first sign of danger.

The person closest to the door is now capable of enacting a lockdown in under a second. Occupants can focus on gathering into the safe haven area.

**EASY**

The **red** button is always on the door. It's not a device which has to be lifted in place.

A key or fob is not needed to lockdown the room.

Staff and first responders can always enter by key; no special tools or procedures necessary.

## **SAFEBOLT™** *Patent Pending*

*Code-Compliant Barricade Lock*

SAFEBOLT™ is the fastest way to barricade a room door while maintaining 100% code compliance. Anyone in the room can press the red button and project a 1" locking bolt to secure the room. SAFEBOLT™ retrofits to existing cylindrical lever locks, making it affordable and easy-to-install.

### **Keyless Instant Lockdown**

- No scrambling to find the classroom key, simply press the red button

### **Retrofits To Existing Cylindrical Locks**

- Cost Efficient: Keep existing cylindrical door locks and keying systems by mounting the SAFEBOLT™ over the existing lock with the collar and adapter ring

### **Superior Intruder Protection**

- Full 1 inch throw stainless steel locking bolt and latch

### **High Visibility Indicator**

- The visual indicator notifies occupants that the door is bolted

### **Free Egress**

- A single motion retracts the bolt and latch from the inside at all times
- ADA compliant, meets all applicable life-safety codes

### **Keyed Entry**

- Staff and first responders can always enter by key
- No one is ever locked in

### **Easy to Install**

- Inswing and Outswing models available
- Thru-bolted assembly
- Metal installation template ensures smooth installation

### **Certifications**

- SAFEBOLT™ is approved to be used as a component in a Fire Door assembly with 1/3-hour rating with Hose Stream

**SAFEBOLT™ | Applications**  
Retrofit Cylindrical Levers

Life-safety codes require one action to exit- pulling down the lever. **Red** button locks respect this requirement, even when the emergency locking bolt is thrown.

You can always exit the room safely - no one is ever locked in. Keyed entry meets code requirements.

## QID™

*Quick Intruder Deadbolt Lock*

QID™, Quick Intruder Deadbolt Lock, is a method of immediately securing rooms by pressing the red button, projecting a deadbolt and locking the lever.

### Keyless Instant Lockdown

- No scrambling to find the oom key, simply press the red button

### Superior Intruder Protection

- Full 1 inch throw stainless steel deadbolt and latch
- Vandal resistant slip-clutch
- Deadbolt locking instead of latch

### Visual Indicator

- The visual indicator notifies occupants that the door is deadbolted and the outside lever is locked

### Free Egress

- A single motion retracts the deadbolt and latch from the inside at all times

### Keyed Entry

- Staff and first responders can always enter by key.
- No one is ever locked in.

### Additional Features & Options

- Locking styles, electrification, touchbars, retrofit and new construction options
- Different functions are available to meet K-12, university, or office needs

### Certifications

Fire Door Applications:

- QID Series locks certified to be used on steel, composite, or wood fire doors, that are listed and rated up to and including 3 hours
- Maximum Door Opening Sizes: QID-M – 4' x 8', QID-C – 4' x 10'

Applicable Standards:

- NFPA 252 (2012) Standard Methods of Fire Tests of Door Assemblies
- UL 10 (c) (R2015) Standard for Positive Pressure Fire Tests of Door Assemblies

**QID™ | Applications**  
Workplaces, Places of Worship,  
Government Facilities, Retail
