## Renewable Energy Feed-in Tariff Scheme

In response to climate change, CLP and HK Electric have introduced a renewable energy Feed in Tariff (FiT) scheme since 2018, respectively. Through the plan, solar power owners can sell the generated electricity to CLP or HK Electric at HK\$3 to 5 per kilowatt-hour of electricity to make a profit and enjoy the following benefits.

**4-year payback period:** The investment payback period of the solar power generation system is locked for 4 years, so that the owner can stably earn the high-priced electricity bills afterwards

**Annual return rate of up to 20%:** After deducting the investment cost of the solar power generation system, the electricity sold can bring about 20% return to the owner every year, or subsidize future electricity bills.

**The plan is valid until 2033:** The feed-in tariff remains unchanged during the contract period of the approved project, and the validity period can be as long as the end of 2033.

### How will I benefit?

You can take part in the scheme by installing a solar and/or wind power renewable energy system on your premises. Once the system is successfully connected to the CLP/HK Electric grid, you can earn FiT payments.

For more information about the scheme, please visit:

# One-stop solar system solution, renewable energy made easy

To participate in the feed-in tariff plan, you need a trust partner. And our one-stop solar solution is your best choice. We have many years of experience in electrical engineering, from survey, draft, application, installation, testing and operation, and subsequent equipment maintenance, one-stop service. When you make a profit return, there is no worries about the future.

## ELIGIBILITY:

- A registered CLP/HK Electric account holder;
- An owner of a village house, roof, farmland, roof, farmland, fishing pond or a warehouse roof;
- Your renewable energy system is powered by solar and/or wind and is located on your premises with a total generation capacity of up to 1MW;

Your renewable energy system can be connected to the CLP/HK Electric network without any increase in capacity or network reinforcement work by CLP/HK Electric.

## PROCESS One Stop Service

- ✓ Free onsite assessment
- ✓ Initial design
- ✓ Apply with CLP or HK Electric
- ✓ Sign contract with customer
- ✓ Installation and construction
- ✓ Submit information to CLP/HK Electric, after the site inspection is satisfied, install the renewable energy meter and connect the system to the grid.
- ✓ The on-grid electricity price is collected according to the meter reading.
