

1

## IPM Program Evaluation

Evaluation of your current IPM (integrated pest management) program including things such as electronic rodent monitoring, current pest control provider and scope of service to ensure they are taking the best proactive approach against all various target pest species such as **bed bugs, german cockroaches, rodents, etc.**

2

## Cost Analysis

Save you money on your current & future pest control contract(s) including one time services. Previously, I have saved customers as much as **\$4k per month** on pest control contracts and **\$65k** on one times services such as fumigations.

3

## Technical Training

On-site and/or remote technical training for your staff on various target pest species such as **"Bed Bug Biology, Behavior and Inspections", "Commercial Kitchens and Sanitization Around Flies"**, etc.

4

## Quality Assurance

Assistance in evaluating and/or implementing an on-site **quality assurance program** around the current pest control provider. I have witnessed many companies failing to implement an on-site QA program costing them hundreds of thousands of dollars.

5

## Pest Identification

Having access to a "Board Certified Entomologist" to identify on-site issues such as potential **bed bug infestations** or other various target pest species is crucial to successful pest control.

Ready to bullet proof your IPM program? Schedule a consultation with NameDatBug Consulting today and let's map out your path to success!
