

We are different from other alert services

We are more than emergencies

CITIZEN
ALERT

Do you have an alert service?

When COVID-19 hit, did you realize that your alert system is only good for sharing information about upcoming emergencies?

Once the emergency is over, do you find it difficult to share updates of information to your citizens.

Do you find it hard fielding calls from citizens about things such as: are your town offices open? is the state/municipality open?

Our system is different...

Our system is flexible: you can send information about anything you like. YES, we can be used in an emergency. You can alert your citizens that danger is coming, but you can also use the system for updates after the emergency. Plus, it can be used outside of emergencies too.

NON-EMERGENCY uses include:

- Are your taxes due? Simply send a notification.
- Do citizens need to, or not need to, wear masks in your offices? Simply send a notification.
- Are your town's restaurants open or closed? Simply send a notification.

You do NOT need to develop or maintain a database of cell phone numbers or email addresses like you have to with other alert systems.

We have you covered from every angle. And your citizens will enjoy being kept up to date on relevant local municipal information.
