

BUSTED HOSE - ON AN "S"

Equipment provided: Four 50' lengths of 2 1/2" hose and one hose clamp. Water will be supplied at 70 P.S.I. nozzle pressure. All hose shall be double jacketed.

Personal equipment: Helmet and boots shall be supplied by each team. Bunker Coats are optional.

Prior to the start of the event, the five team members will be at the nozzle with one man on the nozzle and the rest of the team within arms reach of each other on the hose. When the team is ready, the line will be charged and water will flow. Upon the start signal from the judge, the nozzle will be closed and stay closed until the change-out is complete and the team is ready to hit the target. At the start signal the team will clamp the hose and change the leaking section with a good section of hose. There will be 150' of 2 1/2" hose in three sections in the shape of an "S" with the middle section leaking. After the change out is complete and two team members are on the nozzle, three targets must be knocked down in any order. No team member can cross the foul line during the event or a disqualification will result. The water source will be at 70 P.S.I. Time is taken when the last target is knocked down. If a target is knocked down before the leaking section is changed it will result in a 10 second penalty per target.
