

# Stable 33.33 ☉

## VINYL CENTER HOLE REAMER

Despite the tight tolerances of the hole in the center of the vinyl, ( $0.286'' + 0.001'' / -0.002''$ ), it sometimes happens that the hole is less than  $0.284''$  min.

In solution to this problem, we offer you our reamer STABLE 33.33.

Completely redesigned to allow you better control when correcting the diameter in the center of your vinyl, this small tool is very simple to use.

You can now easily correct this small deviation of the diameter in the center of your vinyls which were too tight to put on your turntable.
