

STABLE 33.2

After years of hard work, we are pleased to present our brand new analog turntable:

THE STABLE 33.2

This turntable is inspired by our state-of-the-art high-end model STABLE 33.1.

By staying true to our values, we achieved the little miracle of creating a high-quality analog turntable at a very competitive price. The STABLE 33.2 is a toneful turntable.

Your STABLE 33.2 is fit with our newly designed motorized tonearm lifter STABLE 1.0 (patent pending). This precise and smooth operating mechanism allows you to remotely lower and raise the tonearm, no matter where it is on the LP.

Equipped with the Jelco™ tonearm of your choice, the STABLE 33.2 can also be fitted with most tonearms available on the market by simply replacing the mounting base.

An adjustable mounting plate allows for the installation of 9 to 12 inches tonearms.

Remotely controlled tonearm lifter built with premium quality components.

The three-pulley system evenly distributes the forces applied to the platter bearing axis.

A powerful synchronous motor coupled to a double belt pulley system allows optimum platter drive.

Excellent RPM stability ensured by 3 kg of stainless steel weights mounted on an elegant translucent acrylic platter.

Oversized spindle shaft with extra-long engagement.

A soft-landing pad for your optional STABLE (or other) stabilizer weight.

Three silicone domes provide excellent decoupling and adhesion.
