Mr. James W. Berg
Waste Management Compliance Bureau
New Hampshire Department of Environmental Services
6 Hazen Drive
Concord, New Hampshire 03301

**RE: North Country Environmental Services
NCES Landfill, Bethlehem New Hampshire**

Dear Mr. Berg:

We are writing with regards to the Phase III primary leachate quality at the above referenced facility. The latest round of analytical data (attached) from a sample gathered on February 11, 1999 indicates that the leachate would not exceed the mixture rule (see attached volatiles log and laboratory report from SCITEST) as it reads in the New Hampshire Department of Environmental Services (Department) Solid Waste Rules Env.-Wm. 404.01(b)(2). This is the second consecutive occurrence that the total combined concentration of any or all of the constituents listed in Env.-Wm. 402.05 have been below 100 parts per million (mg/L).

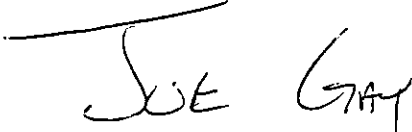

At this time, NCES would like to propose that one additional sample be taken from the Phase III primary leachate tank and analyzed for volatile compounds (8260B). If the results yield what would be a third consecutive combined concentration of less than 100 mg/L, that NCES be allowed to return to the Concord Wastewater Plant for disposal privileges. This would be contingent upon approval by the Superintendent of the Wastewater Plant.

Mr. James W. Berg
