

Hi Sarah,

Thank you and the team for preparing this information. Please send it and cc me on it.

Thanks again!

Best,

Adam

Subject: RE: NEPS - Follow up Soil Mono-Fill

Hi Adam,

WMD has prepared a response to Mr. McManus (see draft below). Would you like to send it, or would you like me to send it and cc you?

Thanks,

Sarah

Draft:

Thank you for your inquiry about the Dummer Yard Landfill. Please understand that, because NHDES is a state agency, your email and NHDES' response to it are part of the public record. The questions from your email are restated here in italics, with responses from NHDES in plain text.

1. *Liability – Will the environmental liability of this property transfer with ownership?*

For any significant property purchase, it is advisable to obtain the assistance of an environmental consultant to conduct environmental due diligence. A consultant with expertise in this area can review information on file at NHDES regarding the site's permits and data and advise you on liabilities associated with the site. A list of environmental consultants doing business in NH is available from the "Remedial Management Consultants" tab on our website at [Menu \(state.nh.us\)](https://www.state.nh.us/menue). The specifics regarding transfer of environmental liability for this property would require analysis by an attorney and would likely need to consider the details of legal agreements that would be executed as part of the purchase and sale.

2. *Who is currently paying for environmental monitoring and maintenance of the property?*

Post closure maintenance and monitoring of the property are the responsibility of the permittee. In this case, without a viable permittee, the financial assurance mechanism has been used to conduct maintenance and monitoring; however, by 2019 the mechanism was depleted by years of use and no longer contained enough money to continue maintenance and monitoring. The maintenance and monitoring required by the facility's permits has not been conducted since then. In recent years, NHDES has paid for maintenance associated with a drain at the landfill, in order to prevent downgradient flooding by water potentially impacted by leachate, which could necessitate emergency response. This work was conducted by Sanborn Head & Associates, under contract to NHDES and is documented in their [Dummer Landfill Work Summary report](#) dated January 5, 2024.

3. *What is the known contamination at the property?*

See the response to question 4.

4. *Is recent groundwater data available?*

Regarding questions 3 and 4, environmental monitoring information, including groundwater data, for the site dating back to 2006 is available through NHDES' OneStop online file system. To access the Dummer Yard groundwater monitoring documents in OneStop, direct your browser to [Onestop Search \(state.nh.us\)](https://onestop.state.nh.us), enter "Berlin" into the Town/City box, and enter "Dummer" into the Name box. Then click "Enter". Next Click on "Existing landfill or landfill closure". Then select "Site Documents" at the top of the screen. Click "Show" next to any listing to view the document. Documents that pre-date 2006 are available in NHDES' paper and microfilm files and can be accessed by requesting a file review through our Public Records Center at 603-271-2919.

5. *What are the current landfill testing and remediation requirements?*

Post-closure maintenance and monitoring requirements are available in the [2004 Approved Permit Modification](#), and groundwater monitoring requirements are provided in the [2016 Groundwater Management Permit](#) and [April 18, 2019 letter from NHDES](#). This facility is currently out of compliance with the requirements in the permits and letter because post-closure maintenance and monitoring and groundwater monitoring have not been conducted since the financial assurance mechanism became depleted.

6. *Are recent Post-Closure Inspection Reports available?*

The most recent Post-Closure report submitted is from 2018, and it is available through OneStop at [Solid Waste Facility \(state.nh.us\)](#). See the document list at the bottom of the screen. Some other solid waste permitting records are available for this property via OneStop and others are available as paper and microfilm records. Review of paper and microfilm files can be coordinated by calling the Public Records Center at 603-271-2919.

7. *Are boring / test pit logs of property available?*

Any boring/test pit logs on file would be accessible through OneStop and NHDES' paper and microfilm files as described in the response to questions 3 and 4 above.

8. *Why did this property withdraw from the Brownfield program? Is it still eligible?*

NHDES files do not contain information on why Berlin DevCo LLC withdrew from the Brownfields Covenant Program. A new prospective purchaser would need to submit a new Brownfields Covenant Application to determine whether the site would be eligible for a covenant.

EXTERNAL: Do not open attachments or click on links unless you recognize and trust the sender.

Good Afternoon all – Thank you for taking the time to meet with our team on Thursday. We appreciated your time. I have attached a four-page proposal for the Dummer Landfill. Our team is exploring a soil mono-fill at this property and would like to explore the next steps.

We ask that you please keep this information within NHDES as this is confidential and has not been shared with the current ownership group.

A few questions we have on our end:

1. Liability – Will the environmental liability of this property transfer with ownership?
2. Who is currently paying for environmental monitoring and maintenance of the property?
3. What is the known contamination at the property?
4. Is recent groundwater data available?
5. What are the current landfill testing and remediation requirements?
6. Are recent Post-Closure Inspection Reports available?
7. Are boring / test pit logs of property available?
8. Why did this property withdraw from the Brownfield program? Is it still eligible?

Once again thank you for your time and appreciate your consideration.

We look forward to working with the NHDES team on future projects.

Subject: RE: NEPS - Follow up Soil Mono-Fill, Berlin - Dummer Yard Landfill, DES#198704035

You don't often get email from sarah.l.yuhaskirn@des.nh.gov. [Learn why this is important](#)

. McManus,

Thank you for your inquiry about the Dummer Yard Landfill. Please understand that, because NHDES is a state agency, your email and NHDES' response to it are part of the public record. The questions from your email are restated here in italics, with responses from NHDES in plain text.

1. *Liability – Will the environmental liability of this property transfer with ownership?*

For any significant property purchase, it is advisable to obtain the assistance of an environmental consultant to conduct environmental due diligence. A consultant with expertise in this area can review information on file at NHDES regarding the site's permits and data and advise you on liabilities associated with the site. A list of environmental consultants doing business in NH is available from the "Remedial Management Consultants" tab on our website at [Menu \(state.nh.us\)](http://Menu.state.nh.us). The specifics regarding transfer of environmental liability for this property would require analysis by an attorney and would likely need to consider the details of legal agreements that would be executed as part of the purchase and sale.

2. *Who is currently paying for environmental monitoring and maintenance of the property?*

Post closure maintenance and monitoring of the property are the responsibility of the permittee. In this case, without a viable permittee, the financial assurance mechanism has been used to conduct maintenance and monitoring; however, by 2019 the mechanism was depleted by years of use and no longer contained enough money to continue maintenance and monitoring. The maintenance and monitoring required by the facility's permits has not been conducted since then. In recent years, NHDES has paid for maintenance associated with a

drain at the landfill, in order to prevent downgradient flooding by water potentially impacted by leachate, which could necessitate emergency response. This work was conducted by Sanborn Head & Associates, under contract to NHDES and is documented in their [Dummer Landfill Work Summary report](#) dated January 5, 2024.

3. *What is the known contamination at the property?*

See the response to question 4.

4. *Is recent groundwater data available?*

Regarding questions 3 and 4, environmental monitoring information, including groundwater data, for the site dating back to 2006 is available through NHDES' OneStop online file system. To access the Dummer Yard groundwater monitoring documents in OneStop, direct your browser to [Onestop Search \(state.nh.us\)](https://onestop.state.nh.us), enter "Berlin" into the Town/City box, and enter "Dummer" into the Name box. Then click "Enter". Next Click on "Existing landfill or landfill closure". Then select "Site Documents" at the top of the screen. Click "Show" next to any listing to view the document. Documents that pre-date 2006 are available in NHDES' paper and microfilm files and can be accessed by requesting a file review through our Public Records Center at 603-271-2919.

5. *What are the current landfill testing and remediation requirements?*

Post-closure maintenance and monitoring requirements are available in the [2004 Approved Permit Modification](#), and groundwater monitoring requirements are provided in the [2016 Groundwater Management Permit](#) and [April 18, 2019 letter from NHDES](#). This facility is currently out of compliance with the requirements in the permits and letter because post-closure maintenance and monitoring and groundwater monitoring have not been conducted since the financial assurance mechanism became depleted.

6. *Are recent Post-Closure Inspection Reports available?*

The most recent Post-Closure report submitted is from 2018, and it is available through OneStop at [Solid Waste Facility \(state.nh.us\)](#). See the document list at the bottom of the screen. Some other solid waste permitting records are available for this property via OneStop and others are available as paper and microfilm records. Review of paper and microfilm files can be coordinated by calling the Public Records Center at 603-271-2919.

7. *Are boring / test pit logs of property available?*

Any boring/test pit logs on file would be accessible through OneStop and NHDES' paper and microfilm files as described in the response to questions 3 and 4 above.

8. *Why did this property withdraw from the Brownfield program? Is it still eligible?*

NHDES files do not contain information on why Berlin DevCo LLC withdrew from the Brownfields Covenant Program. A new prospective purchaser would need to submit a new Brownfields Covenant Application to determine whether the site would be eligible for a covenant.

Subject: RE: Northeast Purification System

Hello Kyle.

Thanks for getting the parties together regarding the Collins and Aikman Plant (former) Superfund Site (the "Site") and the potential for its beneficial reuse. Though one of the important goals of any cleanup at a Superfund Site is

to return the property to beneficial use, at this time EPA and NHDES agree that any proposal to further subdivide the Site property for sale or lease, and development, would need to wait until at least a remedial alternative is selected, designed and implemented. Until that time, it is not known how the implementation of a remedial alternative may impact the property, what access requirements there may be, and what restrictions may be put in place.

EPA's remedial investigation of the Site is complete and the nature and extent of contamination has been characterized. As you mentioned, EPA's release of the proposed plan for a preferred remedial alternative is scheduled for this year. At this point we are planning to release the proposed plan in May/June with a 30-day public comment period running in to July/August. Following release of the proposed plan, EPA and NHDES will convene a public meeting to present the proposed remedial alternative and hold a hearing for public comments. We will be contacting the Town soon to plan for the release of the proposed plan and a public meeting and hearing.

We appreciate the interest in the Site and hope that Mr. Sanborn and others stay informed about the progress at the Site. As I stated, one of EPA's primary goals is to return Superfund Sites to beneficial reuse and that is certainly the case for the Collins and Aikman Site.

Please let me know if there are any questions about any of this or about EPA's Superfund remedial process.

Regards,
Skip

Subject: RE: Northeast Purification System

Caution: This email originated from outside EPA, please exercise additional caution when deciding whether to open attachments or click on provided links.

rk et. al.,

This email serves to connect the folks from Northeast Purification System with those at EPA and NHDES who are working with the Town of Farmington on the Collins and Aikman Superfund Site, as well as Ed Moran, who represents the owner, the NH Custodial Trust. The last correspondence we've (the Town) received from EPA/NHDES was in early February stating that the issuance of the proposed plan was going to be published in May and the subsequent public meetings/hearings would be scheduled for late May or early June during the 30-day public comment period. I'm not sure if that remains the schedule or not, I will leave that to the folks from EPA to comment on.

For the folks from EPA and NHDES, Northeast Purification Systems is a new and innovative industry and

they are interested in this property as a potential site for one of their facilities and are interested in learning more about where things are. I will let Mark and others provide more details. Based on any discussions that take place through email, if it's determined we should all jump on a call together, I'd be happy to set that up.

Now that everyone has virtually met, let the conversation begin!

Subject: RE: Northeast Purification System

Sounds good. If you like me to also connect you with the owners of the Davidson Rubber Site and/or our contacts at EPA/NHDES that are working with us on Superfund requirements, I'm happy to do that. I was going to connect with those folks anyway to get an update on the final feasibility study and the schedule for the issuance of their proposed plan. All of that is supposed to be completed over the next few months – however, we've heard that timeline before and it hasn't come to fruition yet. If you think the Davidson Rubber site is viable for any of the proposed activities we discussed, perhaps you should be brought up to speed on where things are with the EPA.

Let me know what you think. Thanks.

Subject: Re: Northeast Purification System

I would be very interested in seeing the wastewater discharge data if they have any as well.

On Wed, Apr 3, 2024 at 11:45 AM Charles Tiffany <ctiffany@farmington.nh.us> wrote:

I do not believe our system can keep up with this demand. In the summer when our usage is at its highest, we are pumping 300,500 gallons a day in the winter; it drops to 200,000 a day. Also a question? where would the wastewater go since there's no way currently to take PFAS out of the water system? Also keep in mind our wells have currently have non detectable levels of PFAS in them today which is very rare in the state of NH today.

On Tue, Apr 2, 2024 at 5:37 PM Kyle Pimental <kpimental@strafford.org> wrote:

Good afternoon Charles and Ed:

Yesterday, Ken and I met with several folks from Northeast Purification Systems to discuss the potential for several new and innovative industries coming to Farmington. One of those was the PFAS Annihilator, which according to their website is a ready-now, destruction solution powered by supercritical water oxidation (SCWO). This technology breaks the nearly indestructible carbon fluorine bond, destroying PFAS chemicals in Aqueous Film Forming Foam (AFFF), landfill leachate, and wastewater to non-detectable levels. GAC Renew enables on-site regeneration of granular activated carbon (GAC) – extending its lifespan, minimizing downtime, and reducing the total cost of ownership.

For more information on their business and the PFAS Annihilator, you can visit their website here: <https://northeastpurificationsystems.com/>

It is my understanding that this facility would treat PFAS and then send roughly 100,000 – 200,000 gallons per day of PFAS removed leachate to a WWTF. Obviously, the first question that came up was – does the Town's facility even have that capacity? And even if it did, how much capacity would be left? Is that enough to handle additional residential and commercial growth? In addition to determining if there is a suitable location within the Commercial/Industrial District that provides access to the municipal sewer system, there are a lot of other questions that would need to be answered prior to the Town entertaining a proposal such as this – i.e., Is there enough money that would be generated to make what I would imagine to be significant and necessary upgrades to the Town's facility? What are the environmental risks to the community and to those communities downstream? What impact does an increase of that volume have on the Town's existing discharge permits? Etc. One of the first steps in this process is to connect you both with the folks from the Northeast Purification System team to give them an opportunity to introduce themselves and set up a time to chat with you directly.

With that, here are your virtual introductions – Charles Tiffany, Supervisor, Chief Water Operator and Ed Brannon, Public Works Supervisor – please meet Mark Sanborn, Government Relations, Jack McManus, Business Development, and Ben Johnson, Business Development for Northeast Purification Systems. Charlies, please ensure that Steve Deinstadt sees these correspondence.

Please keep Ken and I informed on any discussions and/or concerns that may arise during future conversations.

Good Morning Mike,

Thanks so much to you and the whole team for yesterday's call, it was extremely helpful and informative. I was hoping to find a time on Monday afternoon for the two of us to connect for a quick follow up call; 3:00 PM or later would work for me if that works for you.

Thanks so much!

Hi Mark,
 I just left you a voice mail. Here are some dates/times that would work for us next week:

Tuesday, 6/11 9-10 am; 2:30 to 3:30
 Thursday, 6/13 9:30 – 10:30 am; 1 – 2 pm

The Thursday is preferred for us, but either day can work.

Thanks,
 Mike

Subject: Follow Up Discussion - Repurposing Dummer Landfill Property

EXTERNAL: Do not open attachments or click on links unless you recognize and trust the sender.

Good Morning,

I hope all is well. I was hoping to schedule a follow up meeting to continue our discussion regarding our concept of repurposing the Dummer Landfill property. We have done some due diligence on our side which has resulted in us continuing to see the potential of our proposed use while also understanding the many issues that need to be addressed for state and local permitting & any other local concerns. Below is a list of questions we have as part of the due diligence needed on our end to determine the feasibility of moving forward with our proposed concept.

Happy to come in-person or schedule a Teams meeting, whichever works best for you. In terms of participants from our side, it would be a fairly small group, myself and two or three others (Ben, Jake, and Jarrett, all of whom you have met at previous meetings).

Please let me know what works best for you. Thanks so much for your continued willingness to help us understand the process and requirements

needed for our proposal.

I hope everyone has a great weekend!

List of Questions (Also Attached):

Testing:

- Are there any restrictions to our ability to test pit within the landfill to determine cap thickness?

Brownfield Covenant:

- Can potential purchasers apply for a Brownfield Covenant, or does it have to be a property owner?
- We are hoping to get a better idea of what they expect for a Remedial Action Plan (RAP). It is possible that a previous owner has submitted a RAP and if so, is it possible to receive a copy? Does the site already have a Phase I report completed, and if so, is it possible to receive a copy?
- Are expenses related to the cleanup of the Brownfield reimbursable?

NHDES:

- Is it possible to tie into the existing liner for the Area IIA Sludge Landfill (Our understanding is this cell is supposed to have a liner)?
- Our proposal for the property involves repurposing Area V-Bark Reclamation (approximately 20 acres) as a special waste disposal facility (similar concept as soil monofil with some additional non-hazardous waste materials included in acceptance list)?
- Would it be possible to relocate bark mulch as cap material for the existing unlined landfills? We believe they are already capped with this material.
- We understand there are discussions regarding the legal ownership of the property and that NHDES has a role in any property deals. Is it possible to provide any information NHDES has on the ownership of the property included in the 404 acres and to explain NHDES's role and expectations for proposed remediation?

Subject: RE: Teams Meeting Follow Up Regarding Dummer Yard Bond Close Out

EXTERNAL: Do not open attachments or click on links unless you recognize and trust the sender.

Good Morning Josh and Mike,

I hope you are both well. I was wondering if we could set up a call for the three of us to discuss the status of the bond for Dummer Yard and the efforts to close it out. I have attached the most recent information I received from the file review.

I was also hoping to learn more about any outstanding debt or liens from the State of New Hampshire regarding the Dummer Yard property, bankruptcy, and closures. We are trying to confirm what outstanding financial obligations, if any, exist as it relates to any of the historical operations and monitoring of the site, both pre- and post-closure.

Would it be possible to set a Teams call up sometime next week?

Thanks so much for all of the assistance to this point and for any future assistance you can be, it is very much appreciated!

Subject: Teams Meeting Follow Up

Good Afternoon All,

Thanks so much to everyone for their time last week for our Teams call, the meeting was extremely productive and informative for our group and we hope everyone from NHDES and the AG's Office felt the same.

Please see below a few notes and some thoughts on next steps:

- To ensure we are all on the same page in terms of the property that has been identified for sale, please find attached two versions of maps that identify the property lines of the property.
- Josh, we really appreciate your willingness to share the background information you have on the property. We would be grateful for any information you can provide, including anything on the ownership history and the current ownership status.
- I will be working with the NHDES team to do a proper file review of any documents relating to the property. We fully intend to engage a consultant to produce a Phase 1 assessment, but we would like to begin the file review process as we do our prep-work for the permitting process and any other requirements for our proposal.

- Our team is in the process of conducting a survey of the property. This initial survey will not include any digging for testing of the soil, but we will be doing some overhead and topical survey work. Again, we understand the importance and need to work with NHDES to develop a plan for doing soil testing to gather the data needed by all parties for the permitting process including the development of a remedial action plan, and we plan to work with NHDES on the timing and methods used for that testing work.
- This survey work will allow us to produce an initial design concept along with a proposal concept overview white paper so we have something on paper to discuss.

Thanks again to all of you, we look forward to continuing the discussion on the proposal we are developing for our concept in a collaborative and transparent way. We want to ensure we meet all federal, state, and local permitting and any other requirements to move forward with the type of facility we are proposing, and the information and guidance provided by NHDES and the AG's Office during that process will be essential to achieving that goal.

Looking forward to connecting with everyone again soon.

Good Morning Mike and Craig,

Mike, thanks again to you and Josh for your time last week, the discussion was extremely helpful. Our team looks forward to working with everyone from NHDES, NHDOJ, and the City of Berlin on our proposed project.

I am actually sending this e-mail regarding another matter. I am copying Craig as well given the attached NHDES permit was issued by the Air Division.

Galloway Trucking in Plaistow is a company whose services WL French uses. As you can see, ensuring their operations are in compliance is a subject they have been monitoring going back as far as 2016. They accept some materials that other facilities do not, but WL French's concern is opening the company up to future liabilities if any of the facility's acceptance list or operating procedures are not in full good standing.

I completely understand you cannot give legal advice or act as our lawyer, but if you are able to confirm, based on the information available to NHDES, that the materials they accept and all of their operations are in compliance with all state and federal statutes and regulations, that would be extremely helpful.

Thanks so much for any assistance you can provide with this inquiry, as always it is greatly appreciated.

Mr. Everton – NH does not have any such facilities, but there is a permit exemption for handling inert materials, with some provisions.

Env-Sw 302.03 Solid Waste Permit Exemptions

(9) Collect, store, transfer, process, treat, or dispose of waste concrete, cement, brick, other inert masonry materials, or bituminous concrete, provided that:

- a. The waste is actively managed;
- b. Management practices comply with the universal facility requirements in Env-Sw 1000;
- c. The materials comprising the waste are derived from virgin materials only;
- d. The materials comprising the waste are fully cured;
- e. The waste is free of any materials or substances that have the potential to leach contaminants to groundwater or surface water or to emit pollutants to the air, including lead paint, asbestos, and chemicals;
- f. If landfilled, the bituminous concrete waste is not ground or pulverized; and
- g. The activity occurs after March 30, 1999;

Also, please note that Mike Guilfooy retired in July of 2015.
