You acknowledge that you have read and understood the English language version of this Whitepaper.

Abstract

The Black Dragon Platform aims at a future for technology and artistic commerce that supports protecting and monetizing the value of content experiences. For the Black Dragon project, this means developing around concrete value and the ability to deliver a physical item that is recorded on-chain and the NFT in digital form.

Within the Platform, the BDGR token is used by project creators to gather and interact with artistic NFTs and content-related NFTs that are backed by PHYSICAL art collections and rights in original works of unique value.

Black Dragon is developed in a way that captures all the “benefits” and attributes of our competition and their products while moving to a new area of value secured by blockchain and financial technology.

The Black Dragon Platform blockchain database and the smart contracts developed by Black Dragon are new means to organize the chaotic history of the art world and increase the distribution of highly valued content and entertainment within the growing digital marketplace.

The Black Dragon Platform is designed to be a copyright tracking and exchange DAPP solution based on the Polygon Blockchain.

Users can also use Black Dragon Token as a utility token for decentralized content copyright exchange. Copyright and standard documentation information are stored on the Polygon blockchain.

Content creators and collectors can retain or transfer their interests using the Black Dragon Wallet and associated applications.

Black Dragon

WHITEPAPER V2.3.0

1. Introduction

The undeniable success of projects like OpenSEA and BAYC is an indicator of fast-moving change in the world of art and content. We are indeed seeing a drastic reshuffle as billions of dollars in value are allocated to new technologies and their use in the digital economy through NFTs.

This value growth directly mirrors the 2021 bull market and shows there remain tremendous opportunities in what some people view as the next evolution of digital property and art.

Through collaboration and value distribution, tokenized markets, and the utilities of blockchain tokens themselves, are projected to be just as disruptive as Uber and Airbnb to established business models.

Building on the blockchain provides the Black Dragon Platform a new set of tools to take advantage of changes in the constantly evolving course of art and commerce.

The Black Dragon Platform, structured to benefit shareholders (subject to the prevailing regulatory environment), aims to distribute its Black Dragon Token through accessible means via blockchain following well-established protocols for data and value capture and recording.

The steps to fully execute the economics and benefits of the project include the creation of the database of the Black Dragon assets and an incentivized network of financial resources that bring the content and value of BDGR to the market.

The Black Dragon Platform has begun building the infrastructure of the new value and the community.

Over the coming months, the Black Dragon team intends to open-source some aspects of the technology of Black Dragon, release the API of the Black Dragon Platform, and begin distribution of Black Dragon Token. Readers are invited to join the Black Dragon Platform and help the community of the Black Dragon Platform build a shared vision. This paper showcases the Black Dragon Platform as a blockchain-based solution for reorganizing how art is owned and managed by museums, organizations, and the artist.

1.1. About Black Dragon Inc

Black Dragon Inc (the **Company**) is registered in the United States, tasked with the development, marketing, and community building functions of the project. Applications running on AWS integrated into Web3 make up the backbone of the Black Dragon platform development service that includes utilities for mobile devices, API integration, and third-party data. The Black Dragon native token connects the application layers with an identity and validates the products available within the marketplace. The possible outcomes are innovative, however, the Black Dragon team is taking a calculated approach to roll out such a product, to establish a solid decentralized marketplace orchestrated by the guiding principles of the organization.

The organic approach to developing this blockchain network leads to the community of Black Dragon token holders being a diverse field of technology professionals and leaders in commerce, alongside content professionals and creative arts supporters.

Some assets or developments of the project may fall outside of the oversight of the project through its decentralized nature, however, the guidance and leadership of the company seek to steer the marketplace with a global community as the beneficiaries.

In the case of content provided on the network and creative works, the views of the artists and those producers of content are their own, and are not representative of the company, and are in no way connected to the platform that Black Dragon is creating.

1.2. Token Distribution

The Initial Receivers of the Black Dragon token shall be the custodians set forth by the company. The goal as outlined, being to distribute Black Dragon to shareholders initially, to build a responsive channel to investors, and introduce the network to the Black Dragon Platform.

Black Dracos Tokens

| | | | |
|-----------------------|------|----------------|-------------------------------|
| | | | |
| 60,000,000,000 | 50% | 30,000,000,000 | Share holders |

- 50% 30B Black Dragons will be distributed to existing investors.
- 30% 18B will go to the Reserve, for exchanges, partnerships, and listing fees.
- 5% 3B will be set aside for grants, it will go to a grant foundation.
- 5% 3B will be marked for project founders and development partners. bounties and network improvement incentives.
- 10% 6B will be marked for (Escrow)

*Any applicable conversion rate will be determined after platform launch

BDGR is an integral and indispensable part of the Black Dragon Platform, because, without it, there would be no marketplace with the resources & information to participate in providing the services for the benefit of appeased art and legendary artists of the past. The ecosystem on the Black Dragon Platform is immersive and carries technology, as well as a verifiable document resembling the pschical and virtual NFT.

The below figures represent an approximate distribution table for the first 30 million “distribution pool” Black Dragon. The cost of Black Dragon Token would vary depending on the market demand.

1.2.1 Token Economics and

| | % | Total | | | |

Founders Circle:

- Stake 10% of Holdings
- Percentage accrued during the 12 month period
- Founders must hold for 18 months
- 2 Month notification to liquidate.

COPYRIGHT & INVESTMENT WALLET RESERVE

- Tokens will be distributed to Black Dragon App users as the original content is created.
- Scaling distribution: each time the user base doubles reward halves
- Investment reserve for future partnerships

2. Utility Token smart contract Key features

The native digital cryptographically-secured utility token of the Black Dragon Platform (**Black Dragon**) is a major component of the ecosystem on the Black Dragon Platform and is designed to be used solely on the platform in its initial development.

BDGR will be issued as digital tokens on the Polygon blockchain. Polygon is a distributed computing platform orientated towards smart contracts. Polygon is a distributed virtual machine that allows end-users to build mobile smart contracts for transactions. Smart contracts are stateful applications stored within the Polygon blockchain. These contracts are cryptographically secure and can be verified or enforced automatically. Token contracts are a standard feature of the Polygon ecosystem.

Black Dragon is a functional utility token that will be used as the unit of exchange between participants on the Black Dragon Platform and to interact with web3 layers of the application.

The goal of introducing BDGR is to provide a convenient and secure mode of settlement between participants who interact within the ecosystem on the Black Dragon Platform. Black Dragon token does not in any way represent any shareholding, participation, right, title, or interest in the company, its affiliates, or any other company, enterprise, or undertaking, nor will Black Dragon entitle token holders to any promise of fees, dividends, revenue, profits or investment returns, and are not intended to constitute securities in any relevant jurisdiction. Black Dragon may only be utilized on the Black Dragon Platform, and ownership of Black Dragon carries no rights, express

or implied, other than the right to use Black Dragon as a means to enable usage of and interaction with the Black Dragon Platform.

Black Dragon:

- (a) is not intended to be a representation of money (including electronic money), security, commodity, bond, debt instrument, or any other kind of financial instrument or investment;
- (b) is non-refundable and cannot be exchanged for cash (or its equivalent value in any other virtual currency) or any payment obligation by the Foundation or any affiliate;
- (c) does not represent or confer on the token holder any right of any form concerning the company (or any of its affiliates) or its revenues or assets, including without limitation any right to receive future dividends, revenue, shares, ownership right, or stake, share or security, any voting, distribution, redemption, liquidation, proprietary (including all forms of intellectual property), or other financial or legal rights or equivalent rights, or intellectual property rights or any other form of participation in or relating to the Black Dragon Platform, the Foundation, the Distributor and/or their service providers;
- (d) is not intended to represent any rights under a contract for differences or any other contract the purpose or pretended purpose of which is to secure a profit or avoid a loss;
- (e) is not a loan to the Foundation or any of its affiliates, is not intended to represent a debt owed by the Foundation or any of its affiliates, and there is no expectation of profit; and
- (f) does not provide the token holder with any ownership or other interest in the Foundation or any of its affiliates.

2.1. Original Wallet Integration

This is the main Black Dragon wallet and functions like most other original wallets. The resources under development will be captured in this wallet and used within the charter of the company to distribute token economics and NFTs to the network.

2.2. User and Copyright Wallet

Each time a user or administrator mints new content, the smart contracts supporting the Black Dragon Platform will deliver a token to the copyright wallet of the user. This accounts for the baseline for a new system regarding how art is owned and managed by museums, organizations, and the artist.

This transaction contains a stream of information that is recorded on the Polygons blockchain;

- copyright data and international standards
- content authorized uploader
- upload time being faster than most chains
- upload location being in the users wallet
- meta-data of the content in the NFT

The transfer of an interest in content and NFTs in the transfer of this blockchain record from the current copyright owner to the new copyright owner within the platform and between user wallets.

2.3. Creating more Black Dragon NFTs

Each Black Dragon new token or NFT request generates a transaction fee that is collected and delivered to the “fee pool”.

Anytime the pool reaches the amount set by admin, more Black Dragon NFTs may be created/minted and added to the inventory.

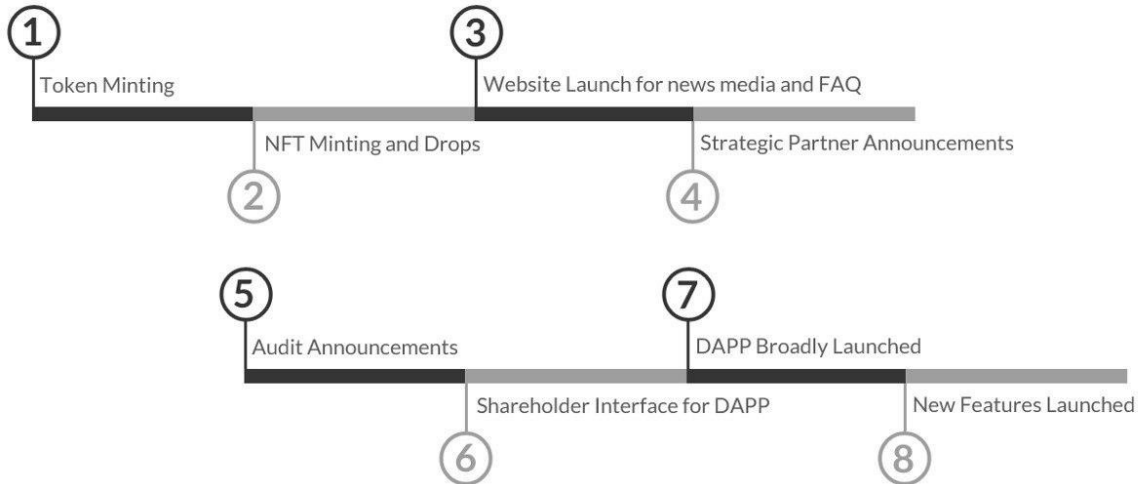

To accommodate the existing product catalog the company is moving to incubate quickly.

BDGR was acquired to become an incubator for various forms of digital currencies, Blockchain codes/programming, and NFT’s backed by a solid asset and inventories, therefore controls are used within the network to

BDGR is ready to publish the much-anticipated NFT’s an issue BlackDraco (BSD) digital coins (tokens) as an additional “bonus” to both groups of shareholders at BDGR and PRPM.

3.0 Roadmap

- Token Minting
- NFT Minting and Drops
- Website Launch for news media and FAQ
- Strategic Partner Announcements
- Audit Announcements
- Shareholder Interface for DAPP
- DAPP Broadly Launched
- New Features Launched

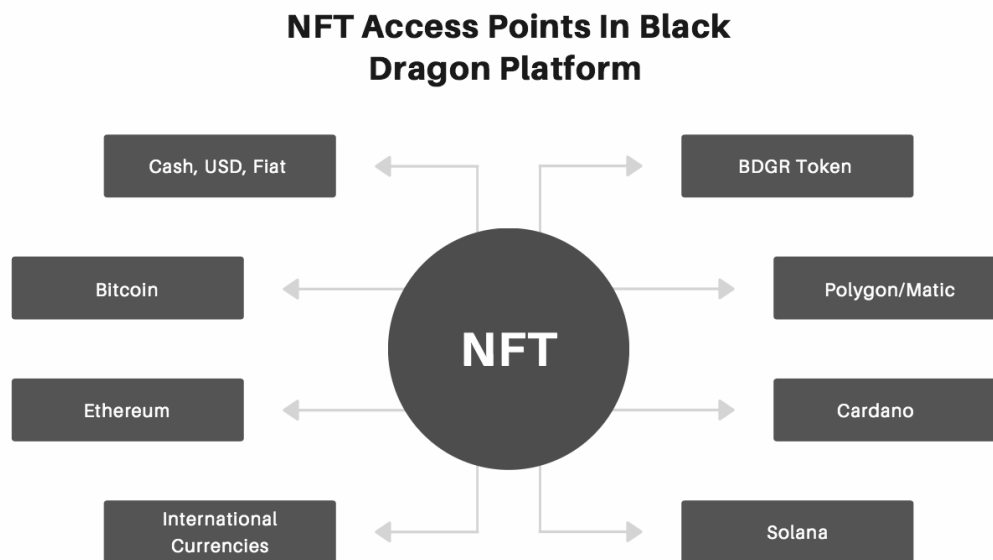

4. The Platform Use Cases

The Black Dragon app is free to download and use. All users can participate in in-app rewards, airdrops, and the other utilities of the Black Dragon platform.

1. Validate transactions
2. Track content
3. Organize data and historical events
4. Manage User Roles in accessing art and NFTs:
 - Purchase art via fiat to generate an NFT
 - Generate an NFT
 - Move NFT to Purchaser's wallet

- Purchase art via Crypto (ETH/MATI/BTC) to generate an NFT
- Generate an NFT
- Move NFT to Purchaser's wallet
- Purchase BDGR - To Buy ART and network utilities
- Purchase art via BDGR to generate an NFT
- Generate an NFT
- Move NFT to Purchaser's wallet

4.1. Content Creation On Blockchain

The Black Dragon Smart Contract and suite of tools on the Polygon blockchain is transparent, permanent, and offers a future of decentralized management and accounting. Paired with copyright signatures original to each piece and NFT, Black Dragon is an original content holder releasing a platform for its stores of original and authorized works. Transparency of the entire chain of work, copyright control, and exchange provides users with complete protection.

Related industry professionals can become verified network users to avail of special features such as monetization and new item requests and communication with the Black Dragon team.

Black Dragon is tailored to benefit many different types of content creators:

- *Production Professionals*: a new network to find, collaborate, and share work. enables art and content producers to work on the blockchain.

- *Art Enthusiasts*: multiplatform support makes uploading a seamless experience for art and not creators and license holders.
- *Insiders and Experts*: exposure to leadership in the fast-evolving space.

5. Technology.

NFTs as a form of dividend is the logical progression of our research and development.

Black Dragon projects already underway accomplish the following within the roadmap:

- Web3 connections for database management
- API driven backend and front end
- React for the presentation layer
- App for tokens wallet

5.1. Development Channels

The Black Dragon Platform has three pillars of development in parallel.

1. Copyright and NFT communication channel.
2. Art and content core information channel.
3. Smart Contract Blockchain channel.

5.2. Functions

The Black Dragon Platform has multiple methods for interacting with the token and NFT units. Currently, the Black Dragon Platform aims to support Android, iOS, and Web clients.

The Black Dragon Platform has opportunities to work with Polygon for deep cooperation in Blockchain and Smart Contracts. Combining a modified Bitcoin Core infrastructure with an indecomposable version of the Ethereum Virtual Machine (EVM), Polygon merges the reliability of Bitcoins unfailing blockchain with the endless possibilities provided by smart contracts. Designed with stability, modularity, and interoperability in mind, Polygon is the foremost toolkit for building trusted decentralized applications, suited for real-world, business-oriented use cases. Its hybrid nature, in combination with a first-of-its-kind PoS consensus protocol, allows Polygon applications to be compatible with major blockchain ecosystems while providing native support for mobile devices and IoT appliances.

6. Risks

You acknowledge and agree that there are numerous risks associated with purchasing Black Dragon, holding Black Dragon, and using Black Dragon for participation in the Black Dragon Platform. In the worst scenario, this could lead to the loss of all or part of the Black Dragon which had been purchased.

6.1. Uncertain Regulations and Enforcement Actions

The regulatory status of Black Dragon and distributed ledger technology is unclear or unsettled in many jurisdictions. The regulation of virtual currencies has become a primary target of regulation in all major countries in the world. It is impossible to predict how, when, or whether regulatory agencies may apply existing regulations or create new regulations concerning such technology and its applications, including Black Dragon and/or the Black Dragon Platform. Regulatory actions could negatively impact Black Dragon and/or the Black Dragon Platform in various ways. The Foundation (or its affiliates) may cease operations in a jurisdiction if regulatory actions, or changes to law or regulation, make it illegal to operate in such jurisdiction, or commercially undesirable to obtain the necessary regulatory approval(s) to operate in such jurisdiction.

After consulting with a wide range of legal advisors and continuous analysis of the development and legal structure of virtual currencies, the Foundation will apply a cautious approach towards the sale of Black Dragon. Therefore, for the token sale, the Foundation may constantly adjust the sale strategy to avoid relevant legal risks as much as possible.

6.2. Inadequate disclosure of information

As of the date hereof, the Black Dragon Platform is still under development and its design concepts, consensus mechanisms, algorithms, codes, and other technical details and parameters may be constantly and frequently updated and changed. Although this white paper contains the most current information relating to the Black Dragon Platform, it is not complete and may still be adjusted and updated by the Black Dragon team from time to time. The Black Dragon team has no ability and obligation to keep holders of Black Dragon informed of every detail (including development progress and expected milestones) regarding the project to develop the Black Dragon Platform, hence insufficient information disclosure is inevitable and reasonable.

6.3. Loss of Talent

The development of the Black Dragon Platform depends on the continued, of the existing technical team and expert consultants, who are highly knowledgeable and experienced in their respective sectors. The loss of any member may adversely affect the Black Dragon Platform or its future development. Further, stability and cohesion within the team are critical to the overall development of the Black Dragon Platform. There is the possibility that conflict within the team and/or the departure of core personnel may occur.

6.4. Failure to develop

There is the risk that the development of the Black Dragon Platform will not be executed or implemented as planned, for a variety of reasons, including without limitation the event of a decline in the prices of any digital asset, virtual currency or Black Dragon, unforeseen technical difficulties, and shortage of development funds for activities.

6.5. Security weaknesses

Hackers or other malicious groups or organizations may attempt to interfere with Black Dragon and/or the Black Dragon Platform in a variety of ways, including, but not limited to, malware attacks, denial of service attacks, consensus-based attacks, Sybil attacks, smurfing, and spoofing. Furthermore, there is a risk that a third party or a member of the Foundation or its affiliates may intentionally or unintentionally introduce weaknesses into the core infrastructure of Black Dragon and/or the Black Dragon Platform, which could negatively affect Black Dragon and/or the Black Dragon Platform. Further, the future of cryptography and security innovations are highly unpredictable and advances in cryptography, or technical advances (including without limitation development of quantum computing), could present unknown risks to Black Dragon and/or the Black Dragon Platform by rendering ineffective the cryptographic consensus mechanism that underpins that blockchain protocol.

6.6. Other risks

In addition, the potential risks briefly mentioned above are not exhaustive and there are other risks (as more particularly set out in the Terms and Conditions) associated with your purchase, holding, and use of Black Dragon, including those that the Foundation cannot anticipate. Such risks may further materialize as unanticipated variations or combinations of the aforementioned risks. You should conduct full due diligence on the Foundation, its affiliates, and the Black Dragon team, as

well as understand the overall framework, mission, and vision for the Black Dragon Platform before purchasing Black Dragon.
