

NSAID Release

Date _____

I, _____, have chosen to medicate my dog, _____, with _____ (trade name _____), a non-steroidal anti-inflammatory drug, in the hopes of alleviating pain associated with osteoarthritis or other condition(s). I understand that this drug can cause damage to the stomach, liver, kidneys, and/or other organs and that the use of this drug is limited to comfort and pain management only, and may shorten my pet's life. NSAIDs are not to be given with steroids or other anti-inflammatory drugs and I will consult with my regular veterinarian before giving other medications in conjunction with NSAID. At this time, I choose not to pursue the recommended blood work to determine the health of the liver and kidneys and understand that if my dog does show signs of illness (including but not limited to vomiting and diarrhea), I may pursue medical treatment and/or diagnostics at any time through my regular veterinarian.
